General Purpose & Slim Body Area Sensor

NA2-N SERIES

Recognition

Certified
(NA2-□-K only)

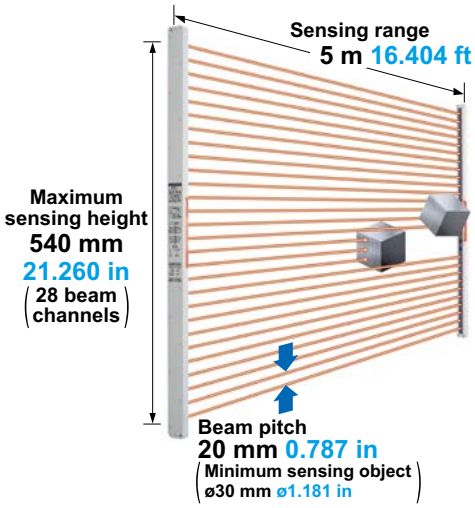
Make sure to use safety light curtains when using a sensing device for personnel protection.

Test input | PNP output type available | Interference prevention

Slim body 13 mm 0.512 in
Maximum sensing height 540 mm 21.260 in

Maximum sensing height 540 mm 21.260 in (28 beam channels)

The thin resin case type area sensor has a sensing hight of 540 mm 21.260 in (28 beam channels), a beam pitch of 20 mm 0.787 in (minimum sensing object of ø30 mm ø1.181 in), and sensing range of 5 m 16.404 ft to meet a variety of needs.



Slim body of just 13 mm 0.512 in thick

The slim-bodied **NA2-N** series fits right in your equipment, since it is only 13 mm 0.512 in thick and 30 mm 1.181 in wide. It does not get in the way of your access to the machine.

VARIETIES

6 types of sensing height

In addition to the conventional 12, 16, and 20 beam channel types, this new lineup includes 8, 24, and 28 beam channel types. A wide model variation is provided with sensing heights from 540 mm 21.260 in (28 beam channels) to 140 mm 5.512 in (8 beam channels).

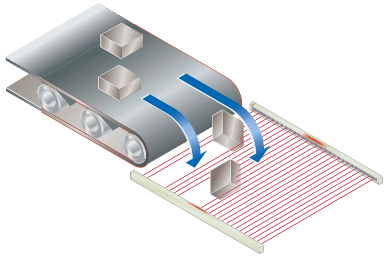
BASIC PERFORMANCE

Globally usable

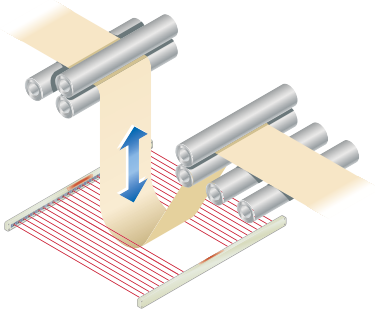
It conforms to the EMC Directive and obtains the UL Recognition. Products that has obtained the Korea's S-mark certification are available as well.
Moreover, PNP output type which is much in demand in Europe is also available.

APPLICATIONS

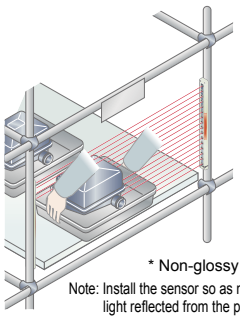
Detecting falling objects whose path is uncertain



Detecting a loop



Preventing wrong parts picking

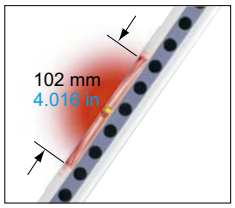


* Non-glossy pipe used
Note: Install the sensor so as not to receive light reflected from the pipes.

FUNCTIONS

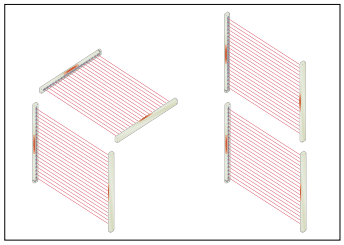
Clearly visible wide job indicator

Both the receiver and the emitter feature job indicators, 102 mm 4.016 in wide, with red bright LEDs.
When the sensing output and the job indicator input are connected, the job indicator can be used as a large operation indicator.



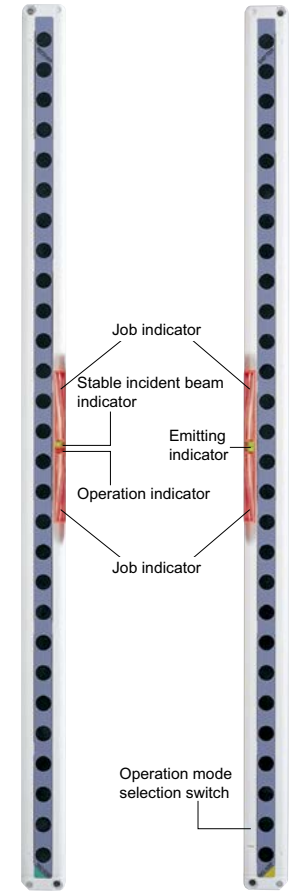
Interference prevention for parallel installation

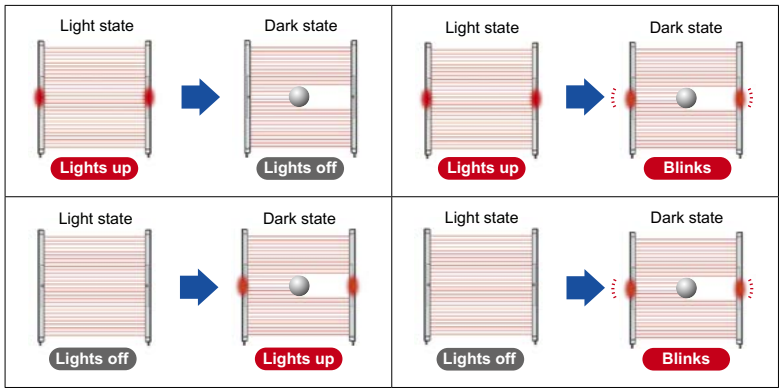
By setting different emission frequencies for two sensors, mutual interference can be prevented. There is no problem even when the sensors are parallel installed for wide detections area coverage. Moreover, the set frequencies can be identified by how many times the emitting indicators is light up.



Selectable lighting pattern

The operation of the job indicator can be selected using the operation mode selection switch.

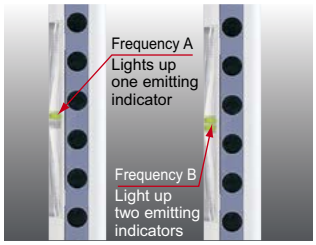


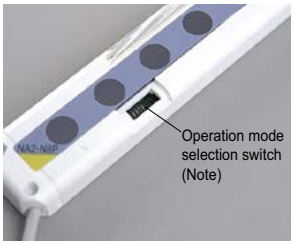


MAINTENANCE

Convenient test input (emission halt) function

Beam output can be stopped via the input of an external signal. This is an useful test input (emission halt) function when beginning operation.





Note: The photo above shows an 8 beam channels type. The operation mode selection switch is equipped on the left side of the main body for models other than the 8 beam channels type.

ORDER GUIDE

Type	Appearance	Sensing range	Model No. (Note)	Number of beam channels	Sensing height (mm in)	Output
NPN output type		5 m 16.404 ft	**NA2-N8**	8	140 5.512	NPN open-collector transistor
			NA2-N12	12	220 8.661	
			NA2-N16	16	300 11.811	
			NA2-N20	20	380 14.961	
			NA2-N24	24	460 18.110	
			NA2-N28	28	540 21.260	
PNP output type			**NA2-N8-PN**	8	140 5.512	PNP open-collector transistor
			NA2-N12-PN	12	220 8.661	
			NA2-N16-PN	16	300 11.811	
			NA2-N20-PN	20	380 14.961	
			NA2-N24-PN	24	460 18.110	
			NA2-N28-PN	28	540 21.260	

Note: The model No. with "**P**" shown on the label affixed to the product is the emitter, "**D**" shown on the label is the receiver.

5 m 16.404 ft cable length type

5 m 16.404 ft cable length type (standard: 3 m 9.843 ft) is also available for NPN output type.
When ordering this type, suffix "**-C5**" to the model No.
(e.g.) 5 m 16.404 ft cable length type of **NA2-N8** is "**NA2-N8-C5**".

Products that have obtained Korea's S-mark certification

There are NPN output type products (excluding the 5 m cable length type) that have obtained Korea's S-mark certification.
When ordering this type, suffix "**-K**" to the model No.
(e.g.) The **NA2-N8** with Korea's S-mark is "**NA2-N8-K**".

OPTIONS

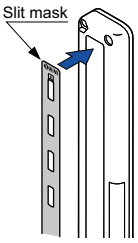
Designation	Model No.	Description	
Slit mask	**OS-NA2-N8**	For 8 beam channels	The slit mask restrains the amount of beam emitted or received. 10 seal types in one set (5 sensor sets) Sensing range: 4 m 13.123 ft (slit on one side) 1.5 m 4.921 ft (slit on both sides)
	OS-NA2-N12	For 12 beam channels	
	OS-NA2-N16	For 16 beam channels	
	OS-NA2-N20	For 20 beam channels	
	OS-NA2-N24	For 24 beam channels	
	OS-NA2-N28	For 28 beam channels	
Sensor mounting bracket (Note)	**MS-NA1-1**	Four bracket set Eight M4 (length 18 mm 0.709 in) screws with washers (Four screws with washers are used), eight nuts, four hooks, four spacers and four M4 (length 15 mm 0.591 in) screws with washers are attached.	
	MS-NA2-1	Spacers are not attached with **MS-NA1-1**. M4 (length 15 mm 0.591 in) screws with washers are not used for **NA2-N** series.	
Sensor supporting bracket	**MS-NA3-N8**	For 8 beam channels	Supports the body of the sensor when used in an environment with strong vibration. Two bracket set
	MS-NA3-N12	For 12 beam channels	
	MS-NA3-N16	For 16 beam channels	
	MS-NA3-N20	For 20 beam channels	
	MS-NA3-N24	For 24 beam channels	
	MS-NA3-N28	For 28 beam channels	

Note: Do not fix the sensor mounting bracket on the front surface of the sensor.

Slit mask

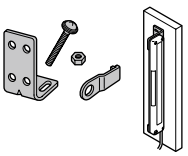
• **OS-NA2-N□**

The slit mask restricts the amount of beam emitted or received and is used to reduce interference between neighboring sensors.
It is also used in cases when the beam intensity is too strong penetrating through the sensing object.
Remove the cover (name plate) from the front of the sensor and replace it with the slit mask.
The sensing range is reduced when the slit mask is used.



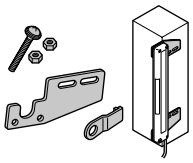
Sensor mounting bracket

• **MS-NA1-1**



M4 screws with washers, nuts, and hooks are attached.

• **MS-NA2-1**



M4 screws with washers, nuts, hooks and spacers are attached.

Sensor supporting bracket

• **MS-NA3-N□**

Output			<NPN output type> NPN open-collector transistor • Maximum sink current: 100 mA • Applied voltage: 30 V DC or less (between output and 0 V) • Residual voltage: 2 V or less (at 100 mA sink current) 1 V or less (at 16 mA sink current)			<PNP output type> PNP open-collector transistor • Maximum source current: 100 mA • Applied voltage: 30 V DC or less (between output and +V) • Residual voltage: 2 V or less (at 100 mA source current) 1 V or less (at 16 mA source current)		
	Utilization category		DC-12 or DC-13					
	Output operation		ON when all beam channels are received (OFF when one or more beam channels are interrupted)					
	Short-circuit protection		Incorporated					
Response time			10 ms or less (12 ms or less when the interference prevention function is used)					
Indicators	Emitter		Emitting indicator: Green LED × 2 (light up during emission; one LED lights up for Frequency A setting, both LEDs light up for Frequency B setting) Job indicator: Red LED (lights up, blinks or lights off when the job indicator input is applied, selected by operation mode switch)					
	Receiver		Operation indicator: Red LED (lights up when one or more beam channels are interrupted) Stable incident beam indicator: Green LED (lights up when all beam channels are stably received) Job indicator: Red LED (lights up, blinks or lights off when the job indicator input is applied, selected by operation mode switch) * When an excess current flows through the output, the stable incident beam indicator and the operation indicator on the receiver blink simultaneously due to operation of the short-circuit protection circuit.					
Interference prevention function			Incorporated					
Test input (emission halt) function			Incorporated					
Environmental resistance	Pollution degree		3 (Industrial environment)					
	Protection		IP40 (IEC)					
	Ambient temperature		–10 to +55 °C +14 to +131 °F (No dew condensation or icing allowed), Storage: –10 to +60 °C +14 to +140 °F					
	Ambient humidity		35 to 85 % RH, Storage: 35 to 85 % RH					
	Ambient illuminance		Incandescent light: 3,000 ℓx or less at the light-receiving face					
	Voltage withstandability		1,000 V AC for one min. between all supply terminals connected together and enclosure					
	Insulation resistance		20 MΩ, or more, with 250 V DC megger between all supply terminals connected together and enclosure					
	Vibration resistance		10 to 150 Hz frequency, 0.75 mm 0.030 in double amplitude in X, Y and Z directions for two hours each					
	Shock resistance		500 m/s² acceleration (50 G approx.) in X, Y and Z directions three times each					
Emitting element			Infrared LED (Peak emission wavelength: 870 nm 0.034 mil (Note 3), modulated)					
Material			Enclosure: Heat-resistant ABS, Lens cover: Polyester, Indicator cover: Acrylic					
Cable			0.2 mm² 4-core cabtyre cable, 3 m 9.843 ft long					
Cable extension			Extension up to total 25 m 82.021 ft is possible for both emitter and receiver, with 0.2 mm², or more, cable.					
Weight (Total weight of emitter and receiver)			Net weight: 350 g approx. Gross weight: 550 g approx.	Net weight: 400 g approx. Gross weight: 600 g approx.	Net weight: 450 g approx. Gross weight: 650 g approx.	Net weight: 500 g approx. Gross weight: 700 g approx.	Net weight: 570 g approx. Gross weight: 750 g approx.	Net weight: 650 g approx. Gross weight: 800 g approx.

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23 °C +73.4 °F.

2) Obtain the current consumption from the following equation.

Current consumption = Power consumption ÷ Supply voltage

(e.g.) In case of **NA2-N8** (when job indicator lights up)

When the supply voltage is 12 V, the current consumption of the emitter is: 0.7 W ÷ 12 V ≈ 0.058 A = 58 mA.

3) Peak emission wavelength has been changed from production in March, 2017.

PRECAUTIONS FOR PROPER USE

- Never use this product as a sensing device for personnel protection.
- For sensing devices to be used as safety devices for press machines or for personnel protection, use products which meet standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.
- If this product is used as a sensing device for personnel protection, death or serious body injury could result.
- For a product which meets safety standards, use the safety light curtain.

Job indicator operation selection

- The operation of the job indicator can be selected with job indicator mode switch.

Operation made switch	Job indicator operation			
	NPN output type		PNP output type	
	Job indicator input		Job indicator input	
	Low	High	Low	High
1 2 3 4	Lights up	Lights off	Lights off	Lights up
1 2 3 4	Lights off	Lights up	Lights up	Lights off
1 2 3 4	Lights up	Blinks	Blinks	Lights up
1 2 3 4	Lights off	Blinks	Blinks	Lights off

Job indicator input signal condition

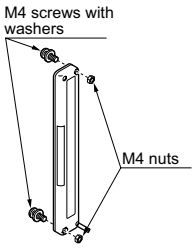
Type	Signal	Signal condition
NPN output	Low	0 to 2 V
	High	5 to 30 V, or open (Note)
PNP output	Low	0 to 2 V, or open (Note)
	High	8 V to +V

Note: Insulate the wire if it is kept open.

Mounting

- Use M4 screws with washers and M4 nuts. The tightening torque should be 0.5 N·m or less. During mounting, do not apply any bending or twisting force to the sensor.

(Purchase the screws and nuts separately.)



Functional description

		Description	Function	
Emitter	①	Emission frequency selection switch	1 ■ : Frequency A	1 ■ : Frequency B
	②	Job indicator mode switch	2 ■ : Lights up when the job indicator input is Low	2 ■ : Lights off when the job indicator input is Low
	③		3 ■ : Lighting	3 ■ : Blinking
	④	Job indicator/Test input (emission halt input) selection switch	4 ■ : Job indicator input	4 ■ : Test input (emission halt input)
	⑤	Job indicator (Red LED)	Lights up, blinks or lights off when the job indicator input is applied, selected by operation mode switch.	
	⑥	Emitting indicator (Green LED × 2)	Light up during emission; one LED lights up for Frequency A setting, both LEDs light up for Frequency B setting.	
Receiver	⑦	Job indicator (Red LED)	Lights up, blinks or lights off when the job indicator input is applied, selected by operation mode switch.	
	⑧	Stable incident beam indicator (Green LED)	Lights up when all beam channels are stably received.	When an excess current flows through the output, the stable incident beam indicator and the operation indicator on the receiver blink simultaneously due to the operation of the short-circuit protection circuit.
	⑨	Operation indicator (Red LED)	Lights up when one or more beam channels are interrupted.	

PRECAUTIONS FOR PROPER USE

To use job indicator as large operation indicator

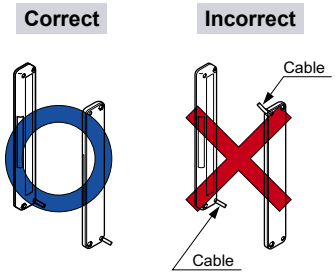
- The job indicators can be used as large operation indicators by setting No. 4 of the operation mode switch to the OFF side and connecting the input (pink) of the emitter to the output (black) of the receiver.

Job indicator mode switch	Light state	Dark state
1 2 3 4	Lights up	Lights off
1 2 3 4	Lights off	Lights up
1 2 3 4	Lights up	Blinks
1 2 3 4	Lights off	Blinks

Note: In order to use the job indicators as large operation indicators, make sure to set No. 4 of the operation mode switch to the OFF side. If it is set to the ON side, the job indicator does not light up or blink.

Orientation

- The emitter and the receiver must face each other correctly. If they are set upside down, the sensor does not work.



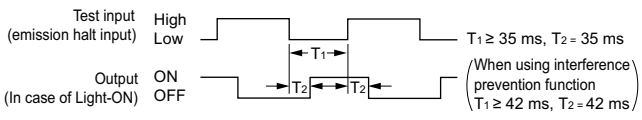
Test input (emission halt) function

- The emission is stopped when No. 4 of the operation mode switch is set to the ON side and the input (pink) of the emitter is made High (PNP output type: Low). Since the output can be turned ON/OFF without the sensing object, this function is useful for start-up inspection. If the output follows the application / withdrawal of the test input (emission halt input), the sensor operation is normal, else it is abnormal.

Operation mode switch setting

OFF	ON
1 2 3 4	1 2 3 4

Time chart



Notes: 1) When the test input (emission halt) function is set, the job indicator (red) does not light up or blink.
2) When emission is stopped during the test input (emission halt) function, the emitter's emitting indicator (green) does not light up.

Interference prevention function

- By setting different emission frequencies, two units of **NA2-N** series can be mounted close together, as shown in the figure below. The emission frequency can be checked by the number of LEDs lighting up in the emitting indicator on the emitter.

	Operation mode switch	Emitting indicator (Emitter)
Sensor Ⓐ	Frequency A 1 2 3 4	One LED lights up
Sensor Ⓑ	1 2 3 4 Frequency B	Two LEDs light up

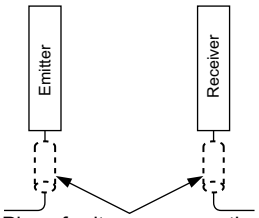
Wiring

- Make sure that the power supply is off while wiring.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this sensor, connect the frame ground. (F.G.) terminal of the equipment to an actual ground.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.

Use conditions to comply with CE Marking

- Following work must be done in case of using this product as a CE marking (European standard EMC Directire) conforming product.

Place ferrite core at the sensor cable.



Place ferrite cores near the cases of emitter and receiver.

Prepare 2 pcs. of the following recommended ferrite core (or an equivalent product.)
<Recommended product>
•ESD-SR-110 [NEC TOKIN Corporation]
•ZCAT1730-0730A(-BK) [TDK Corporation]
•E04SR170730A
[SEIWA ELECTRIC MFG. CO., LTD.]

Others

- Do not use during the initial transient time (500 ms) after the power supply is switched on.
- Avoid dust, dirt and steam.
- Take care that the sensor does not come in direct contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- Take care that the sensor is not directly exposed to fluorescent light from a rapid-starter lamp or a high frequency lighting device, as it may affect the sensing performance.
