

FlexyPin – Pack of 100

SP020

FlexyPin is a connector pin designed to be used with castellated modules with pitch down to 1.27mm. You might be able to use it with 1.00mm pitch but that would require a more expensive PCB because the footprint drills would be very close.

It allows for easy insertion and removal of modules without the need for soldering.

It works great for flashing/testing jigs and other use-cases where castellated modules are involved.

FlexyPins are gold-plated and keep their shape well. We haven't seen any issues over multiple (1000+) insert-remove cycles.

A pack of 100 FlexyPins Because the qty is measured by weight and not by count, the qty in the pack might slightly differ from a 100, in most of the cases it will be more than 100, but in a rare case it might be slightly fewer. Expected range is -5/+1
