ALD2331A/ALD2331B/ALD2331

DUAL PRECISION CMOS VOLTAGE COMPARATOR WITH OPEN DRAIN OUTPUT DRIVER

GENERAL DESCRIPTION

The ALD2331A/ALD2331B/ALD2331 is a monolithic high performance dual precision voltage comparator built with advanced silicon gate EPAD® CMOS technology intended for high precision analog applications. The ALD2331A/ALD2331B/ALD2331 offers ultra-low input offset voltages and currents at its input pre-amplifier, precision voltage comparator and high-current output driver integrated on-chip, in one industry standard pinout 8 Lead PDIP or SOIC package. Primary features include: very high typical input impedance of $10^{12}\Omega$; low input bias current of 10pA; fast response time of 750ns with only 10mV input step signal; very low power dissipation of 55 μ A per comparator; and single (+5V) or dual (\pm 5V) power supply operation; and 50mA open drain output drivers.

The input voltage range includes ground, making this comparator ideal for low level signal detection with high source impedance. The outputs are open-drain configurations, allowing maximum application flexibility, such as wired-OR connection and various different output loads. An external pull-up resistor is required for each output, although the value of the pull-up resistor can vary over a wide range in order to suit the application needs. The outputs can be connected to a higher external voltage than V⁺.

The ALD2331A/ALD2331B/ALD2331 is ideal for a great variety of precision analog voltage comparator applications, especially low level signal detection circuits requiring low standby power, yet retaining high output current capability as needed.

FEATURES

- Fanout of 30LS TTL loads
- Guaranteed to drive 200 Ω loads
- Low supply current of 55 μ A typical
- Pinout of LM193 industry standard voltage comparators
- Extremely low input bias currents -- typically 10pA
- Virtually eliminates source impedance effects
- Low operating supply voltage of 3V to 10V
- Single (+5V) and dual supply (\pm 5V) operation
- High speed for both large and small level signals -- 300ns typical for TTL inputs
- CMOS, NMOS and TTL compatible
- Wired-OR open drain outputs
- High output sink current -- typically 50mA
- Low supply current spike

ORDERING INFORMATION ("L" suffix for lead free version)

Operating Temperature Range *	
0°C to +70°C	0°C to +70°C
8-Pin Small Outline Package (SOIC)	8-Pin Plastic Dip Package
ALD2331ASAL	ALD2331APAL
ALD2331BSAL	ALD2331BPAL
ALD2331SAL	ALD2331PAL

* Contact factory for leaded (non-RoHS) or high temperature versions.

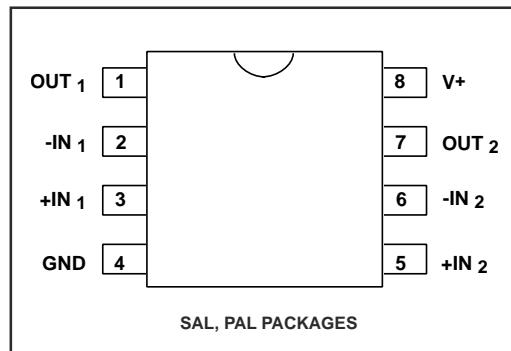

APPLICATIONS

- Simple precision reference voltage setting
- High source impedance voltage comparison circuits
- MOSFET driver
- Dual limit window comparator
- Power supply voltage monitor
- Photo-detector sensor circuit
- Relay or LED driver
- Oscillators
- Battery operated instruments
- Remote signal detection

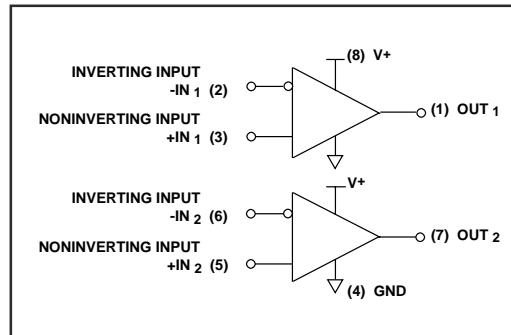

BENEFITS

- Simple precision reference voltage setting
- On-chip input pre-amplifier and output buffers
- Precision voltage comparison without pre-amplifier
- Eliminates need for second power supply
- Wide range of pull-up resistor values

PIN CONFIGURATION

BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS

Supply voltage, V+		+10.6V
Differential input voltage range		-0.3V to V+ +0.3V
Power dissipation		600 mW
Operating temperature range SAL, PAL packages		0°C to +70°C
Storage temperature range		-65°C to +150°C
Lead temperature, 10 seconds		+260°C

OPERATING ELECTRICAL CHARACTERISTICS

TA = 25°C V+ = +5V unless otherwise specified

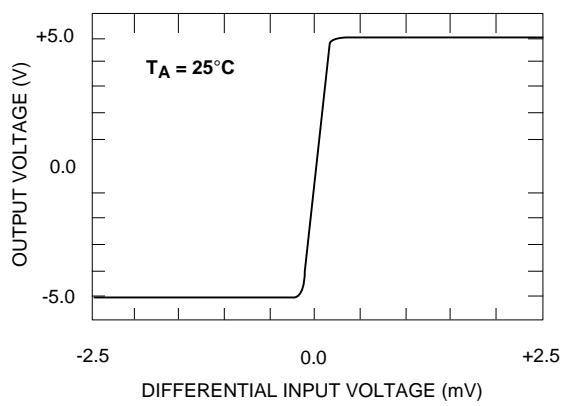

Parameter	Symbol	2331A			2331B			2331			Unit	Test Conditions
