RPE Series Specifications and Test Methods

NI-	No. Item		Specifications		Test Method		
NO.			Temperature Compensating Type	High Dielectric Constant Type	rest method		
1	Operating Temperature Range		-55 to +125°C	Char. X7R: -55 to +125°C Char. Z5U: +10 to +85°C Char. Y5V: -30 to +85°C	-		
2	Rated Voltage		See previous pages		The rated voltage is defined as the maximum voltage which may be applied continuously to the capacitor. When AC voltage is superimposed on DC voltage, V ^{p.p} or V ^{o.p} , whichever is larger, should be maintained within the rated voltage range.		
3	Appearance		No defects or abnormalities		Visual inspection		
4	Dimension and	d Marking	See previous pages		Visual inspection, \	Vernier Caliper	
		Between Terminals	No defects or abnormalities		The capacitors should not be damaged when DC voltages of 300%* of the rated voltage are applied between the terminals for 1 to 5 sec. (Charge/Discharge current ≤ 50mA) *250% for char. X7R, Z5U, Y5V		
5	Dielectric Strength	Body Insulation	No defects or abnormalities		The capacitor is placentainer with metidiameter so that eashort-circuited, is kapproximately 2mr as shown in the fig of the rated DC volimpressed for 1 to capacitor terminals balls. (Charge/Disc ≤ 50mA)	al balls of 1mm ach terminal, tept in from the balls ure, and 250% Itage is 5 sec. between	Approx. 2mm
6	Insulation Resistance	Between Terminals	$\begin{array}{c} C \leqq 0.047 $		ceeding the rated umidity and within	voltage at normal 2 min. of charging.	
7	Capacitance	apacitance Within the specified tolerance			The capacitance, Q/D.F. should be measured at 25°C at the frequency and voltage shown in the table.		
8	Q/Dissipation	Factor (D.F.)	30pF min.: Q≥1,000 30pF max.: Q≥400+20C C: Nominal capacitance (pF)	Char. X7R: 0.025 max. Char. Z5U Char. Y5V): 0.05 max.	Capacitance Item Frequency Voltage	1000pF and below 1±0.1MHz AC0.5 to 5V (r.m.s.)	more than 1000pF 1±0.1kHz AC1±0.2V (r.m.s.)
	Capacitance Temperature Characteristics	Capacitance Change	Within the specified tolerance (Table A on last column)	Within the specified tolerance (Table B on last column)	The capacitance change should be measured min. at each specified temperature stage. (1) Temperature Compensating Type The temperature coefficient is determined usin capacitance measured in step 3 as a reference cycling the temperature sequentially from step through 5 (-55 to +125°C) the capacitance show within the specified tolerance for the temperate coefficient and capacitance change as shown A. The capacitance drift is calculated by dividing differences between the maximum and minim measured values in step 1, 3 and 5 by the cap step 3. Temperature (C)		etage. e mined using the a reference. When from step 1 itance should be
9		Temperature Coefficient	Within the specified tolerance (Table A on last column)				d by dividing the nd minimum by the cap. value in
		Capacitance Drift	Within ±0.2% or ±0.05pF (whichever is larger)		1 2 3 4 5 (2) High Dielectric The ranges of cap: 25°C value over th Table B should be	-55 25 125 25 25 Constant Type acitance change ce temperature ran	ges as shown in

			Specifications			
No.	Item		Temperature Compensating Type High Dielectric Constant Type		Test Method	
10	Terminal Strength	Tensile Strength	Termination not to be broken or loosened Termination not to be broken or loosened		As in the figure, fix the capacitor body, apply the force gradually to each lead in the radial direction of the capacitor until reaching 10N and then keep the force applied for 10±1 sec.	
		Bending Strength			Each lead wire should be subjected to a force of 2.5N and then bent 90° at the point of egress in one direction. Each wire is then returned to the original position and bent 90° in the opposite direction at the rate of one bend per 2 to 3 sec.	
		Appearance	No defects or abnormalities		The capacitor is soldered securely to a supporting	
	Vibration	Capacitance	Within the specified tolerance		terminal and a 10 to 55Hz vibration of 1.5mm peak-	
11	Resistance	Q/D.F.	30pF min.: Q≥1,000 30pF max.: Q≥400+20C C: Nominal capacitance (pF)	Char. X7R : 0.025 max. Char. Z5U) Char. Y5V): 0.05 max.	peak amplitude is applied for 6 hrs. total, 2 hrs. in each mutually perpendicular direction. Allow 1 min. to cycle the frequency from 10Hz to 55Hz and the converse.	
12	2 Solderability of Leads		Lead wire should be soldered with uniform coating on the axial direction over 3/4 of the circumferential direction.		The terminal of a capacitor is dipped into a 25% ethano (JIS-K-8101) solution of rosin (JIS-K-5902) and then into molten solder for 2±0.5 sec. In both cases the depth of dipping is up to about 1.5mm to 2mm from the terminal body. Temp. of solder: 245±5°C Lead Free Solder (Sn-3.0Ag-0.5Cu 235±5°C H60A or H63A Eutectic Solder	
		Appearance	No defects or abnormalities		The lead wire is immersed in the melted solder 1.5mm	
13	Resistance to Soldering Heat	Capacitance Change	Within ±2.5% or ±0.25pF (whichever is larger)	Char. X7R: Within ±7.5% Char. Z5U Char. Y5V): Within ±20%	to 2mm from the main body at 270±5°C for 3±0.5 sec. (L3.5 x W3.0 (mm) type) or 350±10°C for 3.5±0.5 sec. (all other types). The specified items are measured after 24±2 hrs. (temperature compensating type) or 48±4 hrs. (high dielectric type).	
		Dielectric Strength (Between Terminals)	No defects		• Initial measurement for high dielectric constant type The capacitors are heat treated for 1 hr. at 150 ⁺ ₁ 0°C, allowed to set at room temperature for 48±4 hrs., and given an initial measurement.	
	Temperature and Immersion Cycle	Appearance	No defects or abnormalities		First, repeat the following temperature/time cycle 5	
		Capacitance Change	Within ±5% or ±0.5pF (whichever is larger)	Char. X7R: Within ±12.5% Char. Z5U Char. Y5VJ: Within ±30%	times: >> lowest operating temperature ±3°C/30±3 min. >> ordinary temperature/3 min. max. >> highest operating temperature ±3°C/30±3 min.	
		Q/D.F.	30pF min.: Q≧350 10pF to 30pF: Q≥275+5C/2 10pF max.: Q≥200+10C C: Nominal capacitance (pF)	Char. X7R: 0.05 max. Char. Z5U Char. Y5V): 0.075 max.	≫ ordinary temperature/3 min. max. Next, repeat twice the successive cycles of immersion each cycle consisting of immersion in a fresh water 65±6°C for 15 min. and immersion in a saturated	
14		Insulation Resistance	1,000MΩ or 50MΩ • ∞F min. (whichever is smaller)		aqueous solution of salt at 0±3°C for 15 min. The capacitor is then promptly washed in running water, dried with a drying cloth, and allowed to sit at	
		Dielectric Strength (Between Terminals)	No defects or abnormalities		room temperature for 24±2 hrs. (temperature compensating type) or 48±4 hrs. (high dielectric type). • Initial measurement for high dielectric constant type The capacitors are heat treated for 1 hr. at 150±10°C, allowed to sit at room temperature for 48 ±4 hrs., and given an initial measurement.
