CLASSIFICATION	PRODUCT REFERENCE DATA SHEET		
SUBJECT	ZNR SURGE ABSORBER V-SERIES (Bulk Type)		1 - 20
	ERZV20R271	DATE	Novembar 1, 2016

[HANDLING PRECAUTIONS]

⚠Precautions for Safety

In the case that a ZNR surge absorber (Type D, Series V) (hereafter referred to as the ZNR, or product name) is used if an abnormality takes place because of peripheral conditions of the ZNR (material, environments, power source conditions, circuit conditions, etc. in equipment design), fire, electric shock, burn, or product failure may be occur.

The precautions for this product are described below, understand the content thoroughly before usage. For more questions, contact us.

1. ⚠ Precautions to be strictly observe

1.1 Confirmation of performance ratings

Use the ZNR within its rated range of performance such as the Max. allowable voltage, withstanding surge current, withstanding energy, impulse life (surge life), average pulse power, and operating temperature range. If used outside the range, the ZNR can be degrade and have element fracture, which may result in smoking and ignition.

1.2 To avoid accidents due to unexpected phenomena, take the following measures

- 1) In the event of fracture of the ZNR, its pieces may scatter; hence, put the case or cover of the set product in place.
- 2) Do not install the ZNR near combustible substances (polyvinyl chloride wires, resin moldings, etc.). If it is difficult to do, install a nonflammable cover.
- 3) Across-the-line use

When the ZNR is used across a line, put a current fuse in series with the ZNR. (Refer to Item 2.1.1 (4) and Table 1.)

- 4) Use between line to ground
- (1) In the case that the ZNR is used between a line to the ground, the short-circuit of the ZNR may not blow the current fuse because of grounding resistance, which may cause smoking and ignition of the ZNR's exterior resin. As the measure against it, install an earth leakage breaker on the power supply side of the ZNR position. If no earth leakage breaker is installed, use a thermal fuse together with a current fuse in series. (Refer to Table 1.)
- (2) In the case that the ZNR is used between a live part and metal case, a electric shock may develop at a short circuit of the ZNR; hence, ground the metal case to the ground or keep it from the human body.

2. Application notes

2.1 Pay attention to the following items to avoid the shortened life and failure of the ZNR

- 1) Circuit conditions
- (1) Select a ZNR of which the maximum voltage including fluctuations in source voltage allows for the maximum permissible circuit voltage. (Refer to Table 1.)
- (2) In cases that surges are intermittently applied at short intervals (for example, in the case that the voltage of the noise simulator test is impressed etc.), do not cause them to exceed the ZNR's rated pulse power.
- (3) Select a ZNR recommended in Table 1.
- <1> Across the Line (Line to Line) use

If possible, use a Part No. marked with * incase of voltage temporarily rises load unbalance of separately-wired loads, short between hot and neutral-line, open of neutral line in single-phase-three-wired system, and due to resonance at switching for a capacitive, inductive load.

CLASSIFICATION	PRODUCT REFERENCE DATA SHEET	
SUBJECT	ZNR SURGE ABSORBER V-SERIES (Bulk Type)	
	ERZV20R271	2 - 20

<2> Used between line to ground

Use a different Part No. from "Across-the-line use" as table 1, because of raising voltage in case of "Line to Ground Fault".

Use a part No. marked with ** in table 1, in case of the insulation resistance test (500VDC) for equipment. When using a part of the varistor voltage that the insulation efficiency examination can not be cleared, there is a case where the surge absorber can be done by removing it from the circuit depending on the circuit condition (Refer examination of Japan Domestic Safety Regulations).

Use a Part No. marked with *** in table 1, in case of the withstanding voltage test (1000VAC or 1200VAC) for equipment.

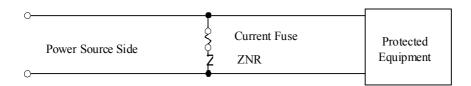

(4) Concerning current fuse

<1> We recommended to selecting a ZNR and the rated current of a current fuse as follows. Finally, please be sure that there is no danger if the ZNR mounted on equipment breaks.

Series	V05	V07	V09	V10	V14	V20
Std. Bulk P/N	ERZV05++++	ERZV07++++	ERZV09++++	ERZV10++++	ERZV14++++	ERZV20++++
Std. Taped P/N	ERZV+5++++	ERZV+7++++	ERZV+9++++	ERZV+A++++	ERZV+E++++	
Fuse rated current	3A max	5A max	7A max	7A max	10A max	10A max

^{*} Fuses shall use rated voltages appropriate for circuits.

<2> The recommended fuse position is shown in table 1, "Example of ZNR application", however, if the load current of protected equipment is larger than that of the above recommended fuse rated current, install a current fuse at the position shown below.

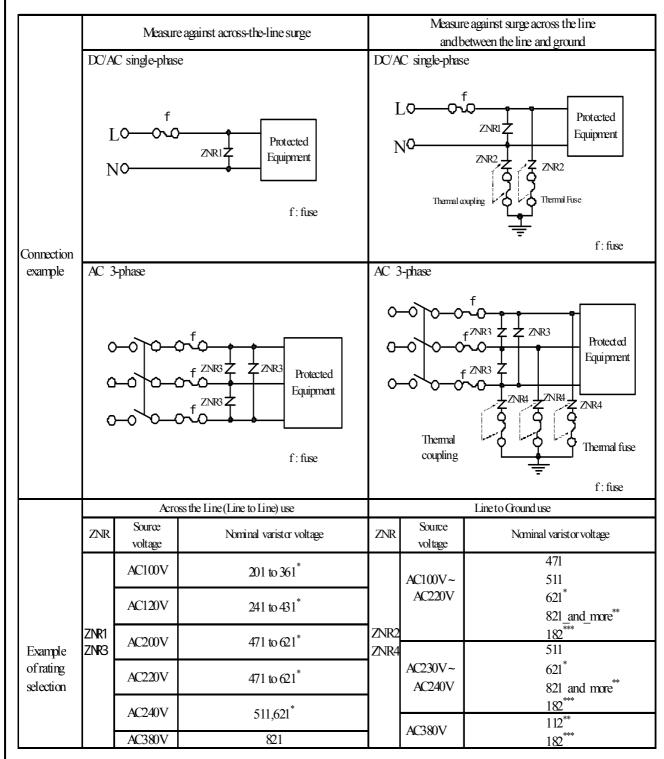

(5) Concerning thermal fuse

Set a thermal fuse to get high thermal conductivity with ZNR.

^{*} Refer to Item (2.1 5)) " CSA safety standard approved fuse" as well.

Table 1 Example of ZNR application

CLASSIFICATION	PRODUCT REFERENCE DATA SHEET	
SUBJECT	ZNR SURGE ABSORBER V-SERIES (Bulk Type)	
	ERZV20R271	4 - 20

2) Operating environments

- (1) The ZNR is designed and manufactured for application in general purpose electronic devices. The ZNR shall not be exposed to the weather, except for usage inside unit.
- (2) Do not use the ZNR in places exposed to temperatures beyond the operating temperature range, such as places exposed to sunlight and vicinities of heating equipment.
- (3) Do not use the ZNR in places exposed to high temperatures and high humidity, such as places exposed directly to rain, wind, dew condensation, and vapor.
- (4) Do not use the ZNR in dusty and salty places and atmospheres polluted by corrosive gases.

3) Processing conditions

- (1) Do not wash the ZNR by such solvents (thinner, acetone, etc.) as its exterior resin deteriorates.
- (2) Do not apply a strong vibration, shock (by falling, etc.) to the ZNR, cracking to its exterior resin and element may occur.
- (3) When coating the ZNR with resin (including molding), do not use such resin.
- (4) Do not bend the ZNR lead wires at the position close to its ZNR exterior resin, or apply external force to the position.
- (5) When soldering the ZNR lead wires, follow the recommended condition and do not melt the solder and insulating materials constituting the ZNR.

T D	Soldering Method	Recommended Condition	Attention
Type D	Flow soldering	260deg.C, within 10sec	Type D is not Reflow soldering object part.

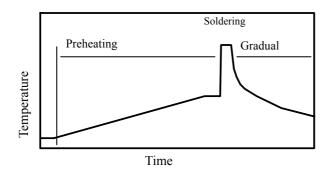

^{*1} When using at the thing except the condition that it is possible to suggest to the above, confirm that there is not a problem.

The limit of the repair be once and go in solder temperature within 400°C and moreover within 5 seconds.

- *2 Profile be careful because there is a margin of error in the way of measuring.
- *3 The temperature depend on the size and the package density of the substrate.

Therefore, confirm every kind of the substrate.

• Soldering temperature-time profile to recommend

Preheating	The normal to 130deg.C	max.120s
Soldering	max.260deg.C	max.10s
Gradual cooling	Gradual cool	ing

CLASSIFICATION	PRODUCT REFERENCE DATA SHEET	
SUBJECT	ZNR SURGE ABSORBER V-SERIES (Bulk Type)	
	ERZV20R271	5 - 20

4) Long-term storage

- Do not store the ZNR under high temperature and high humidity. Store it at temperature up to 40 degree-C and at humidity below 75%RH, and use it within two years.
 - Before using the ZNR that has been stored for a long period (two year or longer), confirm the solderability.
- (2) Avoid atmospheres full of corrosive gases (hydrogen sulfide, sulfurous acid, chlorine, ammonia, etc.).
- (3) Avoid direct sunlight and dew condensation.

5) Application notes for CSA

(1) CSA regulate "Maximum Rating of Fuse" for using ZNR to "Audio, Video and Similar Electronic Equipment" as below.

Maximum Peak Current	Maximum Rating of Fuse
8/20 μs, 1 time (A)	(A)
500 and under	3
Over 500 to 2000 and under	5
Over 2000 to 6000 and under	10
Over 6000	Not specified.

Q) "Rated Voltages" are specified for UL/CSA recognized components besides Maximum Allowable Voltage because of conforming to the Standby Current specified in safety standards. In case of making an application to UL/CSA approval for equipment with ZNR, the maximum AC operating voltage of equipment shall be lower than the ZNR Rated Voltage.

3. Notices

- 3.1 In cases that the ZNR is used in equipment (aerospace equipment, medical equipment, etc.) requiring extremely high reliability, ask us for selection of Part No., and protection coordination, etc. in advance.
- 3.2 There is possibility that the ZNR will unexpectedly smoke or ignite because of abnormal rise of the circuit voltage and invasion of excessive surge. To prevent that accident from spreading over the equipment and not to expand the damage, use multiplex protection such as the adoption of frame-retardant materials for housing parts and structural parts.
- 3.3 Package marking includes the product number, quantity, and country of origin.

 As a rule, country of origin should be indicated in English.

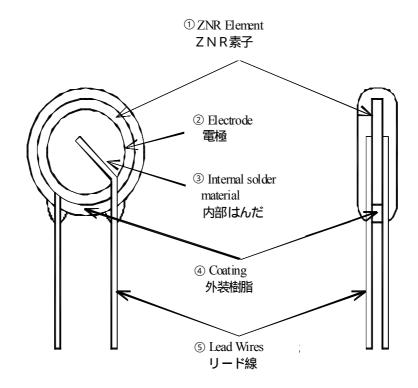

4. Substances of this product

- 4.1 This product not been manufactured with any ozone depleting chemical controlled under the Montreal Protocol.
- 4.2 This product comply with RoHS(Restriction of the use of certain Hazardous Substance in electrical and electronic equipment) Directive(2011/65/EU).
- 4.3 All the materials used in this part are registered material under the Law Concerning the Examination and Regulaon of Manufacture, etc. of Chemical Substance
