

2-Layer EN55022 Class A Radiated Emissions Compliant Evaluation Board for the ADM2582E/ADM2587E 2.5 kV rms Signal and Power Isolated RS-485 Transceivers with ±15 kV ESD Protection

FEATURES

2.5 kV rms power and signal isolated RS-485/RS-422 transceiver
PCB layout optimized for EN55022 radiated emissions

according to the [AN-1349 Application Note](#)

[ADM2587E](#) passes EN55022 Class A (certification available)

[ADM2582E](#) passes EN55022 Class A (certification available)

2-layer printed circuit board (PCB) layout that minimizes PCB material cost

Convenient connections for power and signal through screw terminal blocks

Configurable as half-duplex or full-duplex

5 V or 3.3 V operation

Easily configurable through jumper connections

Test points for measuring all signals

EVALUATION KIT CONTENTS

DOCUMENTS NEEDED

[AN-1349 Application Note](#)

[ADM2582E/ADM2587E data sheet](#)

GENERAL DESCRIPTION

The [ADM2582E/ADM2587E](#) evaluation board can easily evaluate the [ADM2582E](#) and [ADM2587E](#) power and signal isolated RS-485/RS-422 transceivers. Screw terminal blocks provide convenient connections for the power and signal connections. The evaluation board is easily configured through jumper connections. The board can be used in half-duplex or full-duplex configurations and has a 120 Ω termination resistor fitted on the receiver input. The evaluation board can be used with either the [ADM2582E](#) 16 Mbps device or the [ADM2587E](#) 500 kbps device. The driver and receiver are enabled and disabled by jumper connections. Test points are included on the power and signal lines on both sides of the isolation barrier.

EN55022 RADIATED EMISSIONS

The [ADM2582E/ADM2587E](#) evaluation board is designed to reduce emissions generated by the high frequency switching elements used by the *isoPower*® technology to transfer power through the [ADM2582E/ADM2587E](#) integrated transformer. The layout of the evaluation board is generated using the guidelines provided in the [AN-1349 Application Note](#), *PCB Implementation Guidelines to Minimize Radiated Emissions on the ADM2582E/ADM2587E RS-485/RS-422 Transceivers*. The [ADM2587E](#) and [ADM2582E](#) evaluation boards are tested and certified to pass EN55022 Class A.

REVISION HISTORY

5/2016—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

TEST SETUP

The [ADM2582E/ADM2587E](#) evaluation board is shown in Figure 2 with the default jumper settings on the LK1 through LK9 jumper blocks. In the default jumper connections, both the [ADM2582E/ADM2587E](#) driver and receiver are enabled. Figure 2 also shows the power connection on the J2 terminal block, input signal connection on the DI jack, and probes attached to the RXD, DI, Y, and Z test points for a loopback test (LK5 and LK7 are closed to connect A to Y pins and B to Z pins, respectively).

JUMPER SETTINGS

The inputs to the [ADM2582E/ADM2587E](#) can be configured using the jumpers on the evaluation board (see Table 1). Do not place multiple jumper blocks on the LK1, LK3, and LK6 jumper blocks because the input sources may be shorted together. For each link, a single jumper block can move from one position to another, as specified in Table 1.

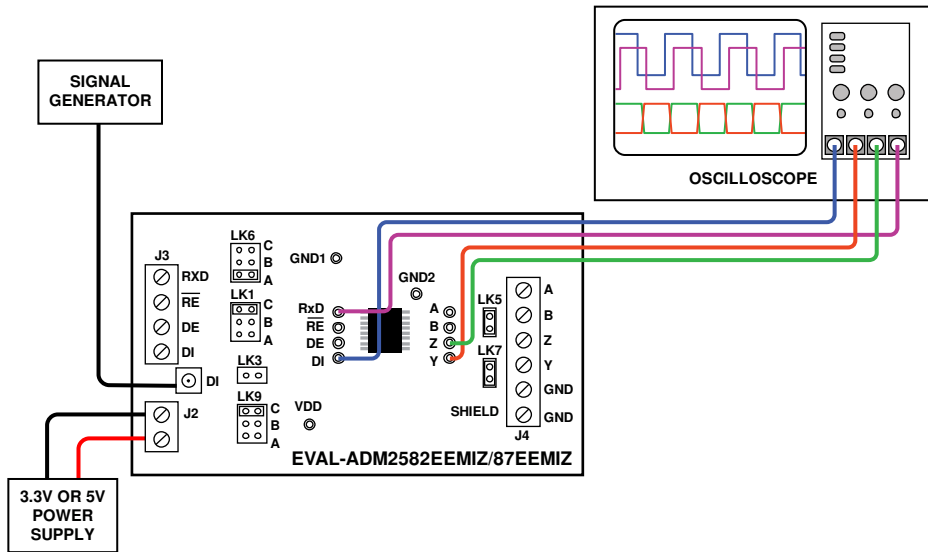

Figure 2. Basic Operation of the EN55022 Class A Compliant Evaluation Board for the [ADM2582E/ADM2587E](#) Isolated RS-485/RS-422 Transceivers

Table 1. Jumper Configuration

Link	Connection	Description
LK1	A	Connects the driver enable input (DE) of the ADM2582E/ADM2587E to V _{CC} pin. This setting enables the driver.
	B	Connects the driver enable input (DE) of the ADM2582E/ADM2587E to the DE J3 terminal block connector.
	C	Connects the driver enable input (DE) of the ADM2582E/ADM2587E to GND ₁ pin. This setting disables the driver.
LK6	A	Connects the receiver enable input ($\overline{\text{RE}}$) of the ADM2582E/ADM2587E to V _{CC} pin. This setting disables the receiver.
	B	Connects the receiver enable input ($\overline{\text{RE}}$) of the ADM2582E/ADM2587E to the $\overline{\text{RE}}$ J3 terminal block connector.
	C	Connects the receiver enable input ($\overline{\text{RE}}$) of the ADM2582E/ADM2587E to GND ₁ pin. This setting enables the receiver.
LK3	Closed	Connects the receiver enable input ($\overline{\text{RE}}$) of the ADM2582E/ADM2587E to the driver enable input (DE). This setting ensures that when the driver is enabled, the receiver is disabled, or when the driver is disabled, the receiver is enabled.
LK9	A	Connects the TxD pin of the ADM2582E/ADM2587E to the DI connector.
	B	Connects the TxD pin of the ADM2582E/ADM2587E to the DI J3 terminal block connector.
	C	Connects the TxD pin of the ADM2582E/ADM2587E to the on-board oscillator circuit.
LK5	Closed	Connects the ADM2582E/ADM2587E Receiver Input B to Driver Output Z. When LK5 and LK7 are both connected, the evaluation board is configured for half-duplex operation.
	Open	When LK5 and LK7 are both open, the evaluation board is configured for full-duplex operation.
LK7	Closed	Connects the ADM2582E/ADM2587E Receiver Input A to Driver Output Y. When LK5 and LK7 are both connected, the evaluation board is configured for half-duplex operation.
	Open	When LK5 and LK7 are both open, the evaluation board is configured for full-duplex operation.

TERMINATION AND PULL-UP/PULL-DOWN RESISTORS

The evaluation board includes the RT and RT1 footprints for fitting termination resistors between the A and B receiver inputs and the Y and Z driver outputs. By default, the board is not fitted with a 120 Ω resistor, RT, between A and B. This resistor must be removed if the board is connected to a bus that is already terminated at both ends. For more information about proper termination, see the [AN-960 Application Note](#), *RS-485/RS-422 Circuit Implementation Guide*.

Although the [ADM2582E/ADM2587E](#) have a built-in receiver fail-safe for the bus idle condition, there are footprints on the evaluation board for fitting the R9 and R10 pull-up resistors to the V_{ISOOUT} supply of the [ADM2582E/ADM2587E](#) on A and Y, as well as the R7 and R8 pull-down resistors to GND_2 on B and Z. These resistors can be fitted if the user is connecting to other devices that require external biasing resistors on the bus. The exact value required for a 200 mV minimum differential voltage in the bus idle condition depends on the supply voltage (for example, 960 Ω for 3.3 V and 1440 Ω for 5 V).

For more information about the bus idle fail-safe, see the [AN-960 Application Note](#), *RS-485/RS-422 Circuit Implementation Guide*.

DECOUPLING AND RESERVOIR CAPACITORS

The evaluation board uses the following decoupling and reservoir capacitors:

- On the logic side of the board, the C3 and C4 capacitors must be 10 nF and 100 nF ceramic capacitors, respectively, and the C2 capacitor must be a 10 μ F tantalum capacitor.
- On the logic side of the board, the C7 capacitor must be a 100 nF ceramic capacitor, and the C9 capacitor must be a 10 μ F tantalum capacitor.
- On the logic side of the board additional capacitors are added for the power regulation circuits. C12, C13, and C16 must be a 10 μ F tantalum capacitors, while C14 and C15 must be 100 nF ceramic capacitors.
- On the bus side of the board, the C5 and C6 capacitors must be 10 nF and 100 nF, respectively, and the C1 and C98 capacitors must be 100 nF and 10 μ F, respectively.

BOARD INTERNAL LAYER THICKNESS

The [ADM2582E/ADM2587E](#) evaluation board consists of two layers. The spacing between the top and bottom layer is 1.6 mm.

The [EVAL-ADM2582EEMIZ](#) and [EVAL-ADM2587EEMIZ](#) PCB has a layer spacing of 0.4 mm between Layer 1 and Layer 2, meeting requirements for isolation standards IEC 61010, third edition, and IEC 60950 in the [AN-1109 Application Note](#), *Recommendations for Control of Radiated Emissions with iCoupler Devices*.

PCB LAYOUT RECCOMENDATIONS

The [ADM2582E/ADM2587E](#) evaluation board is designed to reduce emissions generated by the high frequency switching elements used by the *isoPower* technology to transfer power through the [ADM2582E/ADM2587E](#) integrated transformer. The layout of the evaluation board is generated using the guidelines provided in the [AN-1349 Application Note](#).

The [AN-1349 Application Note](#) provides examples of 4-layer PCBs. The [EVAL-ADM2582EEMIZ](#) and [EVAL-ADM2587EEMIZ](#) PCB layout is a 2-layer PCB. To pass EN55022 Class A on a 2-layer PCB, the following layout guidelines are recommended:

- Ensure that there is good decoupling on the PCB (see the Decoupling and Reservoir Capacitors section).
- Place a ferrite bead between the PCB trace connections and the following IC pins: V_{ISOOUT} (Pin 12) and GND_2 (Pin 11 and Pin 14).
- Do not connect the V_{ISOOUT} pin to a power plane; connect between V_{ISOOUT} and V_{ISOIN} using a PCB trace. Ensure V_{ISOIN} (Pin 19) is connected through the L3 ferrite to V_{ISOOUT} (Pin 12) as shown in Figure 3.
- Place a high voltage discrete capacitor connected between GND_1 (Pin 10) and GND_2 (Pin 11). The [EVAL-ADM2582EEMIZ](#) requires a high voltage discrete capacitor in order to pass EN 55022 Class A with adequate margin to allow for test variation. However, the [EVAL-ADM2587EEMIZ](#) can pass EN 55022 Class A without a high voltage discrete capacitor. Adding a high voltage discrete capacitor to the [EVAL-ADM2587EEMIZ](#) allows a larger pass margin from the EN55022 Class A limits.

The following additional notes apply to the PCB layout; refer to the schematic and artwork in Figure 10 to Figure 13.

- Ensure GND_2 (Pin 14) is connected to GND_2 (Pin 11) on the inside (device side) of the C1 100 nF capacitor.
- Ensure the C1 capacitor is connected between V_{ISOOUT} (Pin 12) and GND_2 (Pin 11) on the device side of the L2 and L3 ferrites.
- Ensure GND_2 (Pin 16) is connected to GND_2 (Pin 11) on the outside (bus side) of the L2 ferrite as shown in Figure 3.
- Ensure that there is a keep out area for the GND_2 plane in the PCB layout around the L2 and L3 ferrites. The keep out area means there must not be a GND_2 fill on any layer below the L2 and L3 ferrites.
- Ensure there is a minimum of 4 mm separation gap between the GND_2 plane fill and the GND_2 fill for the C19 high voltage discrete capacitor pad.

Figure 3. Layout Notes for EVAL-ADM2582EEMIZ and EVAL-ADM2587EEMIZ

- Locate the power delivery circuit in close proximity to the ADM2587E/ADM2582E device, so the V_{CC} trace is as short as possible. The EVAL-ADM2582EEMIZ and EVAL-ADM2587EEMIZ PCB has a power delivery circuit located at the bottom of the PCB with a short trace from the ADP667ARZ regulator output to V_{CC} (Pin 8). This layout example minimizes the loop area in which high frequency current can flow. An increase in the loop area results in an increase in the emissions levels.

EN55022 RADIATED EMISSIONS TEST RESULTS

The ADM2587E evaluation board is tested and certified to pass EN55022 Class A with >6 dB μ V margin. The ADM2582E evaluation board is tested and certified to pass EN55022 Class A. EN55022 Certification documents for the EVAL-ADM2582EEMIZ and EVAL-ADM2587EEMIZ evaluation boards are available to customers upon request from Analog Devices, Inc.

Table 3 provides a summary of the capability of the EVAL-ADM2582EEMIZ and EVAL-ADM2587EEMIZ evaluation boards. All EN55022 radiated emissions tests are performed with the PCB schematic and layout as described in Figure 10 to Figure 13. The C19 capacitor (See Figure 10) high voltage discrete capacitor is removed for some tests. Table 2 describes the effect of removing or adding the capacitor.

Table 2. EN55022 Test Results Summary

Device	Configuration	EN 55022 Result
ADM2587E	C19 not fitted	Pass Class A (3.9 dB μ V margin)
ADM2582E	C19 not fitted	Pass Class A (1.2 dB μ V margin)
ADM2582E	C19 fitted	Pass Class A (with a larger 7.5 dB μ V margin)

The EVAL-ADM2582EEMIZ and EVAL-ADM2587EEMIZ evaluation boards are configured and tested with 3.3 V V_{CC} or 5.0 V V_{CC} power supplied to the ADM2582E and ADM2587E devices, with the power supplied from the ADP667ARZ regulator output to V_{CC} (Pin 8). The ADP667ARZ regulator input is supplied from a standard 9 V battery. All EN55022 radiated emissions testing is performed with 9 V batteries. Testing is performed at 500 kbps clock (ADM2587E) or 16 Mbps clock (ADM2582E), with the clock supplied by the on-board oscillator. The ADM2587E/ADM2582E transceiver is connected in full-duplex mode and the bus pins are loaded with a 54 Ω termination resistor (maximum bus loading). Measurements are carried out in an anechoic chamber at 10 m from 30 MHz to 2 GHz. Figure 4 to Figure 9 show the results of the worst case horizontal scans and Table 3 to Table 8 show the tabulated quasi-peak (QP) results.

NOTES

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
