III. Reliability Tests

Note: After any of the following tests performed, the sensitivity of the microphone unit shall not deviate more than $\pm 3\text{dB}$ from its initial value. The microphone shall maintain its initial operation and appearance. Measurements for tests with thermal requirements are to be done after 2hrs of conditioning at 20°C .

Vibration Test	The microphone to have no interference in operation after vibrations, 10Hz to 55Hz for 1minute full amplitude 1.52mm, for 2 hours at three axes.	
Drop Test	The microphone unit must operate when dropped three times once on each axis from a height of 1m onto a metal plate.	
Temperature Test	High	The microphone unit must operate within its sensitivity specifications after subjected to the following conditions: $+85^{\circ}\text{C}$ for 200 hrs, and exposed to room temperature for 2 hrs.
	Low	The microphone unit must operate within its sensitivity specifications after subjected to the following conditions: -40°C for 200 hrs, and exposed to room temperature for 2 hrs.
Humidity Test	$+40^{\circ}\text{C}$ at 95%RH for 200 hrs	
Temperature Cycle Test	After exposure at -25°C for 30 minutes, at $+20^{\circ}\text{C}$ for 10 minutes, at $+60^{\circ}\text{C}$ for 30 minutes, at $+20^{\circ}\text{C}$ for 10 minutes, 5 cycles. (The measurement to be done after 2 hrs of conditioning at $+20^{\circ}\text{C}$.)
