PRODUCT OVERVIEW

The PMA3-352GLN+ is a PHEMT based wideband, low noise MMIC amplifier with a unique combination of low noise, high IP3, and flat gain over wideband making it ideal for sensitive, high-dynamic-range S-band receiver applications. This design operates on a single 5V supply, is well matched for 50Ω and comes in a tiny, low profile package (3 x 3 x 0.89mm), accommodating dense circuit board layouts.

KEY FEATURES

Feature	Advantages
Low noise, 0.7 dB at 3 GHz	Enables lower system noise figure performance.
Wide bandwidth with flat gain <ul style="list-style-type: none"> • ± 0.9 dB over 2.5 to 3.5 GHz 	Enables a single amplifier to be used in many wideband applications including defense, instrumentation and more.
High Gain, 28.5 dB at 3 GHz	Enables signal amplification without the need for multiple gain stage. Thus minimize effect of subsequent stages on noise figure.
High IP3 <ul style="list-style-type: none"> • +27.8 dBm at 3 GHz • +14.8 dBm at 3 GHz 	Combination of low noise and high IP3 makes this MMIC amplifier ideal for use in low noise receiver front end (RFE) as it gives the user advantages of sensitivity and two-tone IM performance at both ends of the dynamic range.
3 x 3mm 12-lead MCLP package	Tiny footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB.
