4. RELIABILITY

	Item	Test conditions	Evaluation standard	
1	Hi-Temp.Test	The microphone unit must be subjected to +70℃ for 100 hours and exposed to room temperature for 3 hours.		
2	Low-Temp.Test	The microphone unit must be subjected to -40℃ for 100 hours and exposed to room temperature for 3 hours.		
3	Humidity &Heat Test	The microphone unit must be subjected to +55℃, 85% RH-for 100 hours and exposed to room temp for 3 hours.		
4	Thermal Shock Test	The microphone unit must be subjected to following condition [+70°C 0.5H → room temp 1H→ -40°C 0.5H →room temp 1H]at 10 cycles and exposed to room temp for 3 hours.	After any of the tests, the sensitivity of the microphone unit shall not change more than ± 3 dB from initial value and	
5	Vibration Test	The microphone unit must be subjected to a procedure that it is vibrating for two hours from each of the three directions(x y z) with a frequency of 10-55Hz and a 1.52mm-high amplitude.	shall keep its initial operation and appearance.	
6	Drop Test	The microphone unit must be subjected to a procedure that it is dropped on a slippery marble floor for 5 times from a 1.0-meter-height without package.		
7	Storage Temperature	-30℃~+60℃		
8	Operating Temperature	30℃~+60℃		

Additional Notes

- 1) All the soldering procedures upon microphones must be completed in a heat sink device. The temperature of the soldering iron must be limited to 340°C±10°C and the soldering time should not exceed 3 seconds.
- Operators, the soldering fixture and the soldering iron must be statically grounded under each soldering process.
