

# 3-terminal Filters(SMD) For Signal Line

Conformity to RoHS Directive

## MEM Series MEM2012D Type

This chip type EMC filter eliminates the noise component from a communication line. This noise component can be eliminated by inserting this products in series with the communication line. In comparison to earlier multilayer chip EMC filters, signal waveform distortion is low after the signal has passed through the filter. Therefore this filter can be used for high speed pulse signal circuits and wide band analog RGB circuits.

### FEATURES

- Small size (L2 W1.25 T0.85mm).
- Steep attenuation characteristic.
- Low distortion of signal after passing through filter.
- SMD product that can use taped packaging for automatic mounting.
- Capable of reflow soldering.

### TEMPERATURE RANGES

Operating/Storage	-40 to +85°C
