Wiring Diagrams

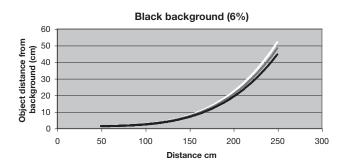

Sensing Conditions "Industrial" mode

In this mode the maximum operating frequency is set to 250 Hz and detection is optimized for objects close to the background for top performance in general industry automation applications such as pallet wrapping machines, airport baggage conveyors, wood planks handling/stacking.

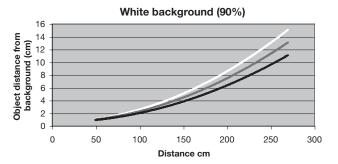

Sensing Conditions "Door" mode

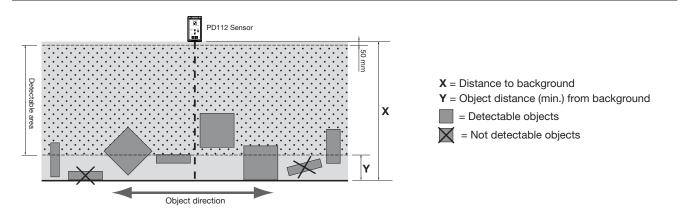

In this mode various parameters are optimized for monitoring and control of doors, from a position above the door/in the ceiling. Maximum operating frequency is set to 16.7 Hz, adapting to moving persons, and the test input – for evaluation of the sensor functioning through muting of the emitter – is enabled for use by a door controller or e.g. a PLC.

Detection Principle

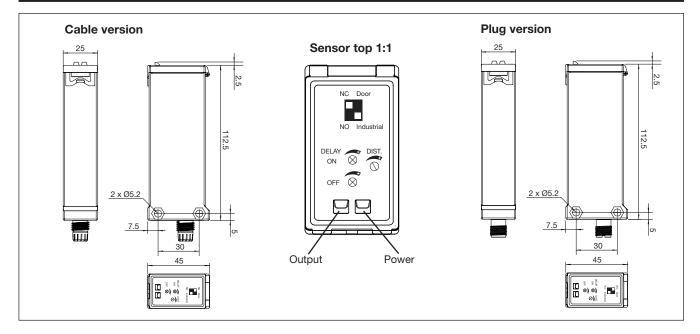

Adjustment

- Background suppression adjustment*
- 1. Align the sensor at the background
- 2. Turn distance calibration screw (28 turns) clockwise until yellow led is ON 3. Turn distance calibration screw (28 turns) counter clockwise until
- yellow led turns OFF 4. Background is now neglected
- Object detection adjustment *If no background exists a white cardboard can be used as background.
