NC – No internal connection

description

This 64-bit memory features high speed and fast fall-through times. It is organized as 16 words by 4 bits.
A first-in, first-out (FIFO) memory is a storage device that allows data to be written into and read from its array at independent data rates. This FIFO is designed to process data at rates up to 40 MHz in a bit-parallel format, word by word.

Data is written into memory on a low-to-high transition at the load-clock (LDCK) input and is read out on a low-to-high transition at the unload-clock (UNCK) input. The memory is full when the number of words clocked in exceeds by 16 the number of words clocked out. When the memory is full, LDCK signals have no effect on the data residing in memory. When the memory is empty, UNCK signals have no effect.

Status of the FIFO memory is monitored by the $\overline{\text{FULL}}$ and $\overline{\text{EMPTY}}$ output flags. The $\overline{\text{FULL}}$ output is low when the memory is full and high when it is not full. The $\overline{\text{EMPTY}}$ output is low when the memory is empty and high when it is not empty.

A low level on the reset ($\overline{\text{RST}}$) input resets the internal stack-control pointers and also sets $\overline{\text{EMPTY}}$ low and sets $\overline{\text{FULL}}$ high. The Q outputs are not reset to any specific logic level. The first low-to-high transition on LDCK, after either a $\overline{\text{RST}}$ pulse or from an empty condition, causes $\overline{\text{EMPTY}}$ to go high and the data to appear on the Q outputs. It is important to note that the first word does not have to be unloaded. Data outputs are noninverting with respect to the data inputs and are at high impedance when the output-enable (OE) input is low. OE does not affect the $\overline{\text{FULL}}$ or $\overline{\text{EMPTY}}$ output flags. Cascading is easily accomplished in the word-width direction but is not possible in the word-depth direction.

The SN74ALS232B is characterized for operation from 0°C to 70°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

1
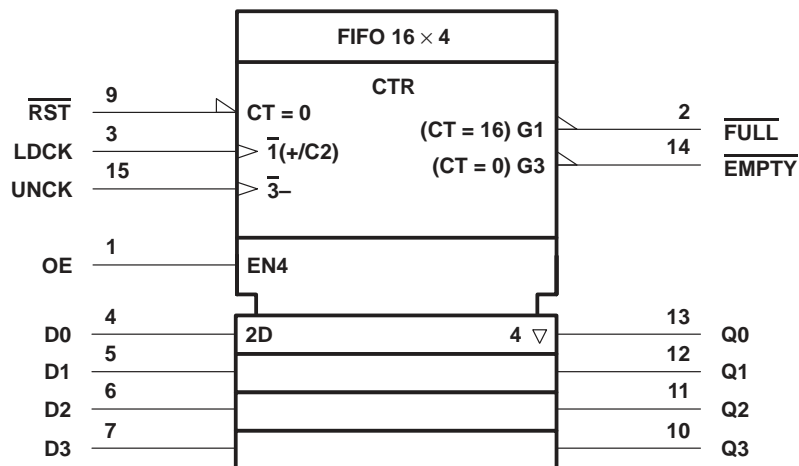

logic symbol†

† This symbol is in accordance with ANSI/IEEE Standard 91-1984 and IEC Publication 617-12. The symbol is functionally accurate but does not show the details of implementation; for these, see the logic diagram. The symbol represents the memory as if it were controlled by a single counter whose content is the number of words stored at the time. Output data is invalid when the counter content (CT) is 0.
Pin numbers shown are for the DW and N packages.

logic diagram (positive logic)
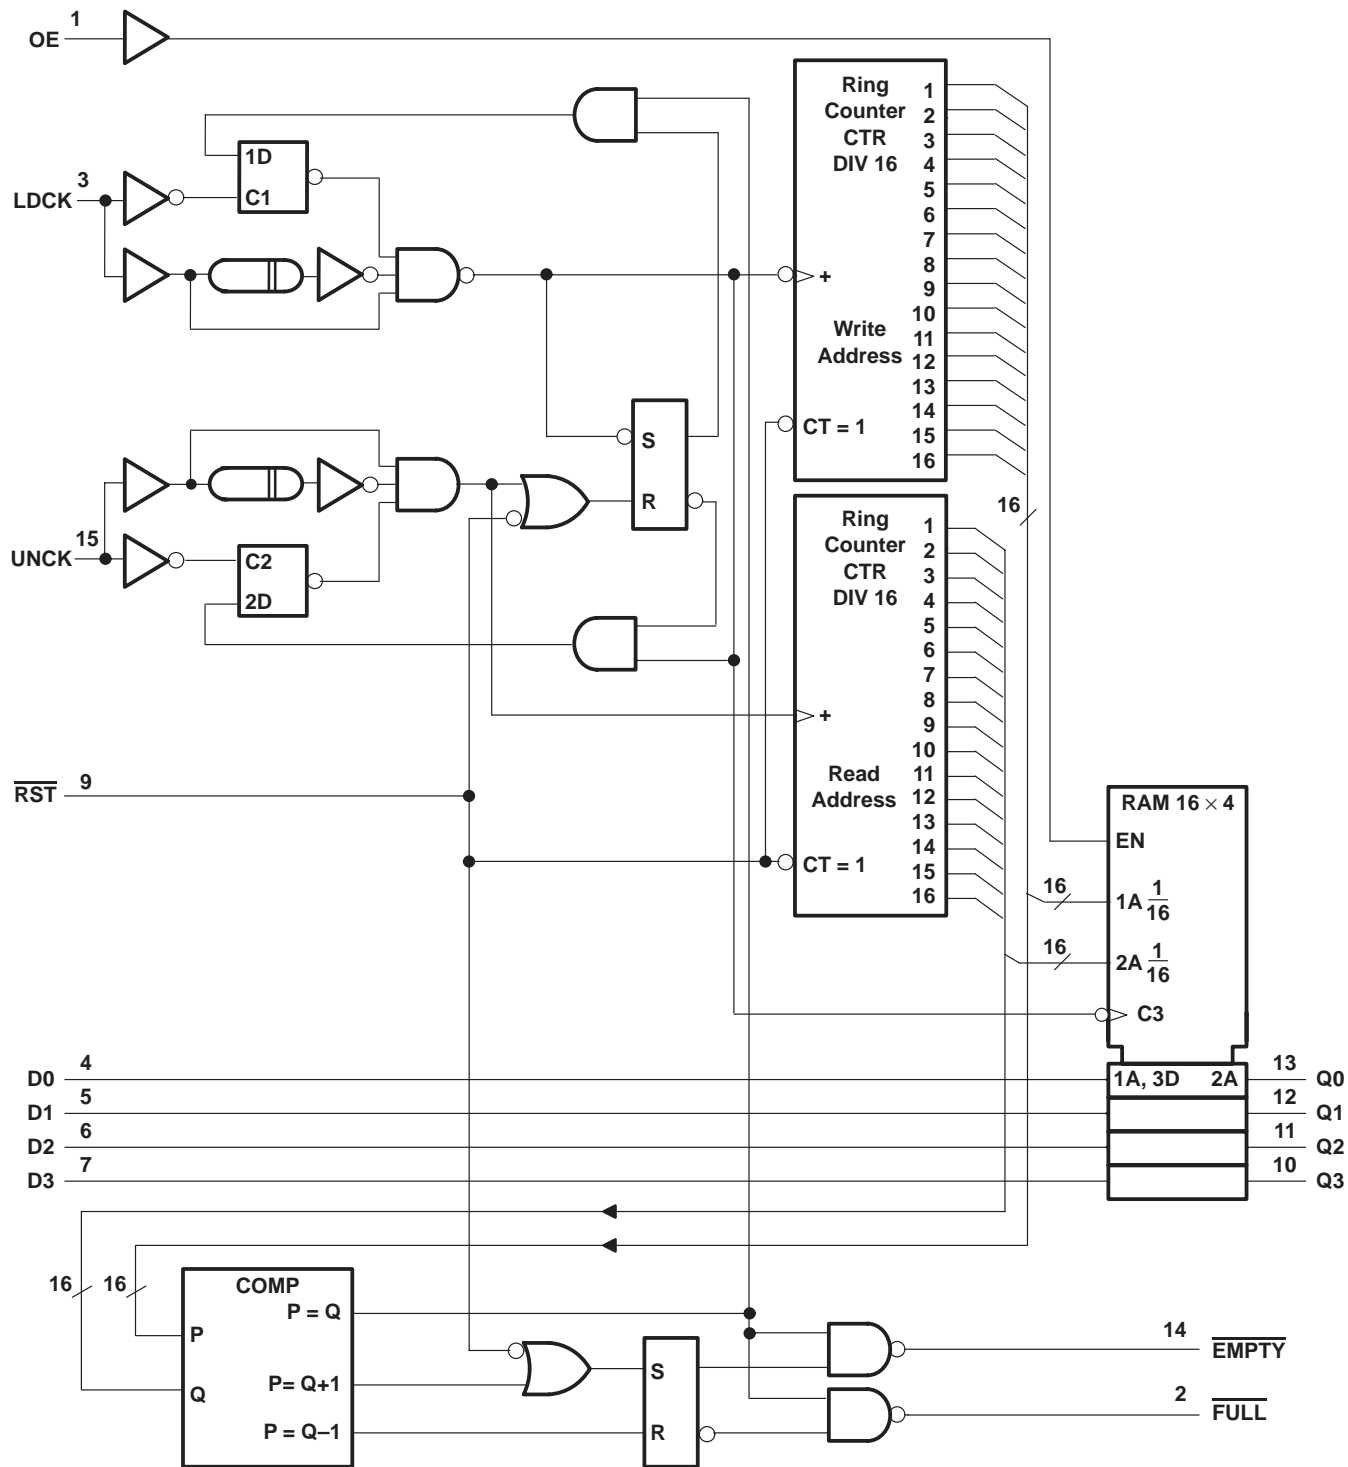

Pin numbers shown are for the DW and N packages.

SN74ALS232B
16 × 4 ASYNCHRONOUS FIRST-IN, FIRST-OUT MEMORY

timing diagram

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V_{CC} .... –0.5 V to 7 V
Input voltage range, V_I .... –0.5 V to 7 V
Voltage range applied to a disabled 3-state output .... –0.5 V to 5.5 V
Package thermal impedance, θ_{JA} (see Note 2): DW package .... 105°C/W
FN package .... 83°C/W
N package .... 78°C/W
Storage temperature range, T_{stg} .... –65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions beyond those indicated in the "recommended operating conditions" section of this specification is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
NOTES: 1. All voltage values are with respect to GND.
2. The package thermal impedance is calculated in accordance with JESD 51, except for through-hole packages, which use a trace length of zero.

POST OFFICE BOX 655303 ● DALLAS, TEXAS 75265

recommended operating conditions (see Note 3)

			MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage		4.5	5	5.5	V
V_{IH}	High-level input voltage		2			V
V_{IL}	Low-level input voltage				0.8	V
I_{OH}	High-level output current	Q outputs			−2.6	mA
		$\overline{FULL}$, $\overline{EMPTY}$			−0.4	
I_{OL}	Low-level output current	Q outputs			24	mA
		$\overline{FULL}$, $\overline{EMPTY}$			8	
T_A	Operating free-air temperature		0		70	°C

NOTE 3: To ensure proper operation of this high-speed FIFO device, it is necessary to provide a clean signal to the LDCK and UNCK clock inputs. Any excessive noise or glitching on the clock inputs that violates limits for maximum V_{IL}, minimum V_{IH}, or minimum pulse duration can cause a false clock or improper operation of the internal read and write pointers.

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP[†]	MAX	UNIT
V_{IK}		V_{CC} = 4.5 V,	I_I = −18 mA			−1.2	V
V_{OH}	Q outputs	V_{CC} = 4.5 V,	I_{OH} = −2.6 mA	2.4	3.2		V
	$\overline{FULL}$, $\overline{EMPTY}$	V_{CC} = 4.5 V to 5.5 V,	I_{OH} = −0.4 mA	V_{CC}−2			
V_{OL}	Q outputs	V_{CC} = 4.5 V	I_{OL} = 12 mA		0.25	0.4	V
			I_{OL} = 24 mA		0.35	0.5	
	$\overline{FULL}$, $\overline{EMPTY}$	V_{CC} = 4.5 V	I_{OL} = 4 mA		0.25	0.4	
			I_{OL} = 8 mA		0.35	0.5	
I_{OZH}		V_{CC} = 5.5 V,	V_O = 2.7 V			20	µA
I_{OZL}		V_{CC} = 5.5 V,	V_O = 0.4 V			−20	µA
I_I		V_{CC} = 5.5 V,	V_I = 7 V			0.1	mA
I_{IH}		V_{CC} = 5.5 V,	V_I = 2.7 V			20	µA
I_{IL}		V_{CC} = 5.5 V,	V_I = 0.4 V			−0.2	mA
I_O[‡]		V_{CC} = 5.5 V,	V_O = 2.25 V	−30		−112	mA
I_{CC}		V_{CC} = 5.5 V			80	125	mA

[†] All typical values are at V_{CC} = 5 V, T_A = 25°C.
[‡] The output conditions have been chosen to produce a current that closely approximates one-half of the true short-circuit output current, I_{OS}.

TEXAS INSTRUMENTS

timing requirements over recommended operating free-air temperature range (see Figure 1)

			MIN	NOM	MAX	UNIT
f_{clock}[†]	Clock frequency	LDCK			40	MHz
		UNCK			40	
t_w	Pulse duration	$\overline{RST}$ low	18			ns
		LDCK low	15			
		LDCK high	10			
		UNCK low	15			
		UNCK high	10			
t_{su}	Setup time	Data before LDCK↑	8			ns
		LDCK inactive before $\overline{RST}$↑	5			
t_h	Hold time	Data after LDCK↑	5			ns
		LDCK inactive after $\overline{RST}$↑	5			

† The maximum possible clock frequency is 40 MHz. The maximum clock frequency when using a 50% duty cycle is 33.3 MHz.

switching characteristics (see Figure 1)

LOAD CIRCUIT FOR 3-STATE OUTPUTS
**VOLTAGE WAVEFORMS
SETUP AND HOLD TIMES**

**VOLTAGE WAVEFORMS
PULSE DURATION**
**VOLTAGE WAVEFORMS
PROPAGATION DELAY TIMES**
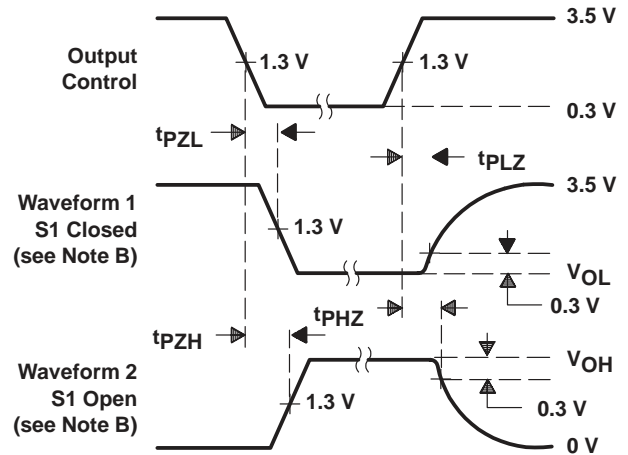

**VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES, 3-STATE OUTPUTS**

NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.
Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z_O = 50 Ω, t_r ≤ 2 ns, t_f ≤ 2 ns.
D. The outputs are measured one at a time with one transition per measurement.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN74ALS232BN	ACTIVE	PDIP	N	16	25	RoHS & Non-Green	NIPDAU	N / A for Pkg Type	0 to 70	SN74ALS232BN	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
