Low Profile | Isolated | Safety Approvals | OCP | OVP | Remote ON/OFF
CQHS-series

■Feature

Compact DC-DC Converter, " BRICK SIZE" which has been standard size for Telecommunication Market
High efficiency (synchronous rectifier circuit)
High density
High reliability : not built-in aluminum and tantalum electrolytic capacitor
Built-in overcurrent, overvoltage and thermal protection circuits
Built-in remote ON/OFF
Mounting hole (M3 tapped)

■CE marking

Low Voltage Directive
RoHS Directive

■UKCA marking

Electrical Equipment Safety Regulations
RoHS Regulations

■Safety agency approvals
UL60950-1, C-UL, EN62368-1

■5-year warranty

■Optional parts

Heat sink (optional parts : CQHS300/CQHS350)

CQHS250

Implementation・Mounting Method

Mounting method

■When multiple power modules are used side by side, position them with sufficient spaces to allow adequate air ventilation so that the temperature of each power module will remain within the temperature range shown in the "Derating".

■Do not pass the DC input pattern underneath the power module as this will increase conducted noise. Place the DC input pattern away from the power module.Do not pass the DC output pattern underneath the power module as this will increase output noise. Place the DC output pattern away from the power module.

■High frequency noise is radiated from the power module. When mounting the power module on a PCB, leave a copper pattern on the PCB to let it act as a shield and connect this pattern to the mounting hole.

■Avoid placing pattern layout in hatched area shown in right figure to insulate between pattern and power supply.

-VIN   -VOUT
●CQHS300/CQHS350

■Soldering CQHS series with printed board must be done under the flat condition by using the mounting hole and fixing with the screw.
If CQHS series is inclined and it's mounted, the insulation of the internal components and printed board might not be kept.

■When a heat sink cannot be fixed on the base plate side, order the power module with "-T" option. A heat sink can be mounted by affixing a M3 tap on the heat sink.
Please make sure a mounting hole will be connected to a grounding capacitor CY.

|	Mounting hole
Standard	M3 tapped
Optional : -T	ϕ 3.4 thru

Implementation · Mounting Method

Stress onto the pins

■Applying excessive stress to the input or output pins of the power module may damage internal connections. Avoid applying stressin excess of that shown in below.

■Input and output pins are soldered onto the internal PCB. Do not bend or pull the leads with excessive force.

●CQHS300/CQHS350

■As unexpected stress may be applied to the pins, set the diameter of the PCB mounting hole at 3.5mm.

■As unexpected stress may be applied to the pins from vibration or shock, fix the power module by using the mounting holes screws to reduce stress.

■Fix the power module to the PCB with the screws before soldering the input and output pins to prevent the PCB pattern being damaged.

Soldering temperature

■Flow soldering   : 260℃ for up to 15 seconds.
■Soldering iron (26W) : 450℃ for up to 5 seconds.

Derating

■It is necessary to note the thermal fatigue life by power cycle.Please reduce the temperature fluctuation range as much as possible when the up and down of the temperature are frequently generated. Contact us for more information on cooling methods.

●CQHS250

■Use with the convection cooling or the forced air cooling. Make sure the temperatures at temperature measurement locations shown below are on or under the derating curve. Ambient temperature must be kept at 85℃ or under.

Temperature of measurement location
■For option "B" which is used with the convection cooling, forced air cooling or conduction cooling, use the temperature measurement location as shown in below.

Derating

① Vin=DC36-60V

CQHS2504850
CQHS2504832
Vin : 36 - 60V

Aluminum base plate
Tc : Measuring point
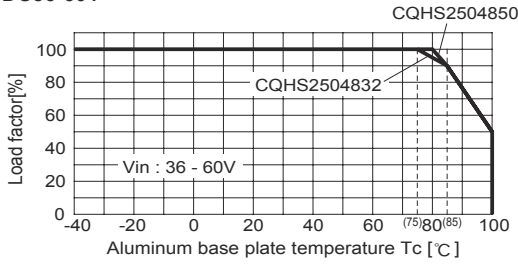

② Vin=DC60-76V

Vin : 60 - 76V

● CQHS300/CQHS350

■ Use the power modules with conduction cooling (e.g. heat dissipation from the aluminum base plate to the attached heat sink).
Below figure shows the derating curves with respect to the aluminum base plate temperature. Note that operation within the hatched areas will cause a significant level of ripple and ripple noise. Contact us for more information on cooling methods.

■ Please measure the temperature on the aluminum base plate edge side when you cannot measure the temperature of the center part of the aluminum base plate. In this case, please take 5deg temperature margin from the derating characteristic of below figure .
