

FEATURES

- *Guaranteed 25 μ V max. Offset Voltage*
- *Guaranteed 0.6 μ V/ $^{\circ}$ C max. Offset Voltage Drift with Temperature*
- *Excellent 1.0 μ V/Month max. Long Term Stability*
- *Guaranteed 0.6 μ V_{p-p} max. Noise*
- *Guaranteed 2.0nA max. Input Bias Current*

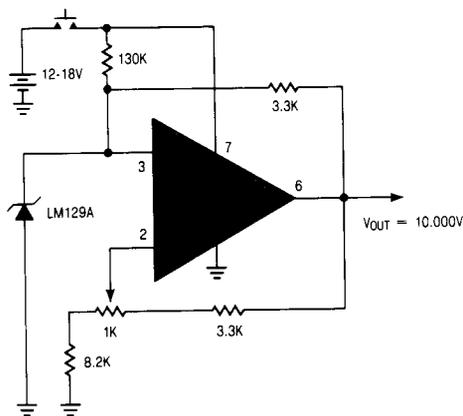

APPLICATIONS

- Thermocouple Amplifiers
- Strain Gauge Amplifiers
- Low Level Signal Processing
- Medical Instrumentation

DESCRIPTION

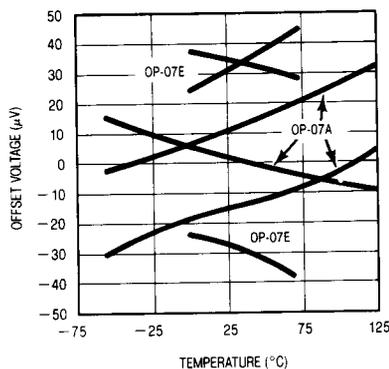

The OP-07 offers excellent performance in applications requiring low offset voltage, low drift with time and temperature and very low noise. Linear's OP-07 is interchangeable with many of the precision op-amp device types. The OP-07 also offers a wide input voltage range, high common mode rejection and low input bias current. These features result in optimum performance for small signal level and low frequency applications. Use of advanced design, processing and testing techniques make Linear's OP-07 a superior choice over similar products. A buffered reference application is shown below. For single op amp applications requiring higher performance, see the LT1001 and for matched dual precision applications see the LT1002.

Precision Buffered Single Supply Reference

The OP-07 contributes less than 5% of the total drift with temperature, noise and long term drift of the reference application.

The ● denotes the specifications which apply over full operating temperature range.

For MIL-STD components, please refer to LTC 883C data sheet for test listing and parameters.

Note 1: Offset voltage for the OP-07A is measured 60 seconds after power is applied. All other grades are measured with high speed test equipment, approximately 1 second after power is applied.

Note 2: This parameter is tested on a sample basis only.

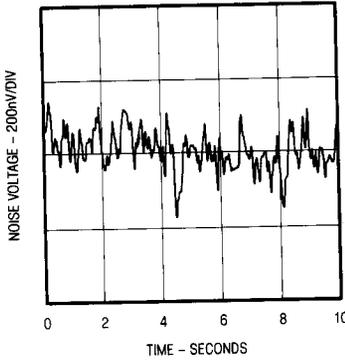

Note 3: Long term Input Offset Voltage Stability refers to the averaged trend line of V_{OS} versus Time over extended periods after the first 30 days of operation. Excluding the initial hour of operation, changes in V_{OS} during the first 30 operating days are typically $2.5\mu V$.

Note 4: This parameter is guaranteed by design.

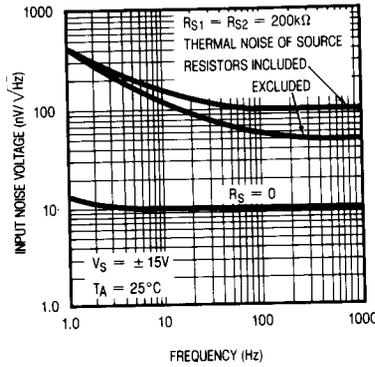

Note 5: The OP-07D is available by special request.

 - 2) OBSERVE OUTPUT FOR 10 SECONDS
 $A_V = 25000$

† This circuit is also used as the burn-in configuration with supply voltages changed to $\pm 20V$, $R1 = R3 = 10k\Omega$, $R2 = 200\Omega$, $A_V = 100$.

Application Tip:

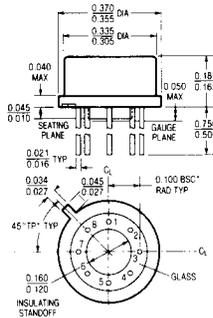

When the OP-07 is used as a replacement in 725, 108/108A, 308/308A applications, removal of external compensation is optional. For conventionally nulled 741 type applications, external trimming should be removed. Care should be taken to avoid thermocouple voltages caused by temperature variations between the input terminals or dissimilar metals.
