## 150 mA CMOS Low Iq Low-Dropout Voltage Regulator with Voltage Detector Output

The NCP400 is an integration of a low-dropout regulator and a voltage detector in a very small chip scale package. The voltage regulator is capable of supplying 150 mA with a low dropout of 160 mV at 100 mA. It contains a voltage reference unit, an error amplifier, comparators, PMOS power transistor, current limit and thermal shutdown protection circuits for the regulator portion.

A highly accurate voltage detector with hysteresis and an externally programmable time delay generator are implemented to prevent erratic system reset operation. It features complementary output with active low reset function.

The NCP400 is designed to work with low cost ceramic capacitors and requires only a small 1.0  $\mu$ F capacitor at regulator output. Its low quiescent current is ideal for battery powered applications.

### Features

- LDO Voltage Regulator and Voltage Detector Together in a Very Small Wafer Level Package, 6 Bump Flip-Chip, 1.0 x 1.5 mm
  - Low Quiescent Current of 50  $\mu$ A Typical
  - Internal Current Limit and Thermal Shutdown Protection
  - Low Cost and Small Size Ceramic Capacitors
  - Input Voltage Range of 1.8 V to 5.0 V
  - Voltage Regulator
    - ◆ 1.8 V (\*) Output with 2% Accuracy
    - ◆ Excellent Line and Load Regulation
    - ◆ Low Dropout of 160 mV at 100 mA
  - Voltage Detector
    - ◆ 2.3 V (\*) Threshold with 2% Accuracy
    - ◆ Externally Programmable Time Delay Generator
    - ◆ Excellent Line and Load Regulation
  - This is a Pb-Free Device
- (\*) Other voltages can be developed upon request.  
Please contact your ON Semiconductor representative.

### Typical Applications

- Memory Cards
- Cellular Phones
- Digital Still Cameras and Camcorders
- Battery Powered Equipment

## TYPICAL OPERATION CIRCUIT

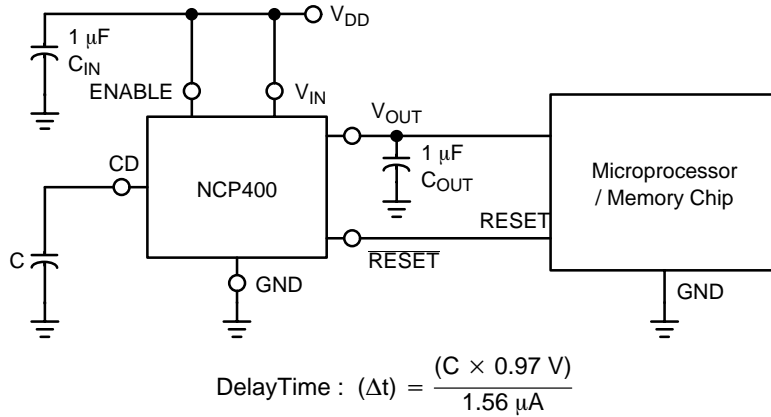

Figure 1. Power Supply and Reset Circuit for Microprocessor and/or Memory Chip

## PIN DESCRIPTION

Pin No.	Symbol	Description
1	$V_{IN}$	Positive power supply input voltage.
2	ENABLE	This input is used to place the device into low-power standby. When this input is pulled low, the device is disabled. If this function is not used, ENABLE should be connected to $V_{IN}$ .
3	$\overline{\text{RESET}}$	Voltage detect output signal.
4	CD	Delay capacitor pin.
5	GND	Power supply ground.
6	$V_{OUT}$	Voltage regulator output voltage.

## REPRESENTATIVE BLOCK DIAGRAM

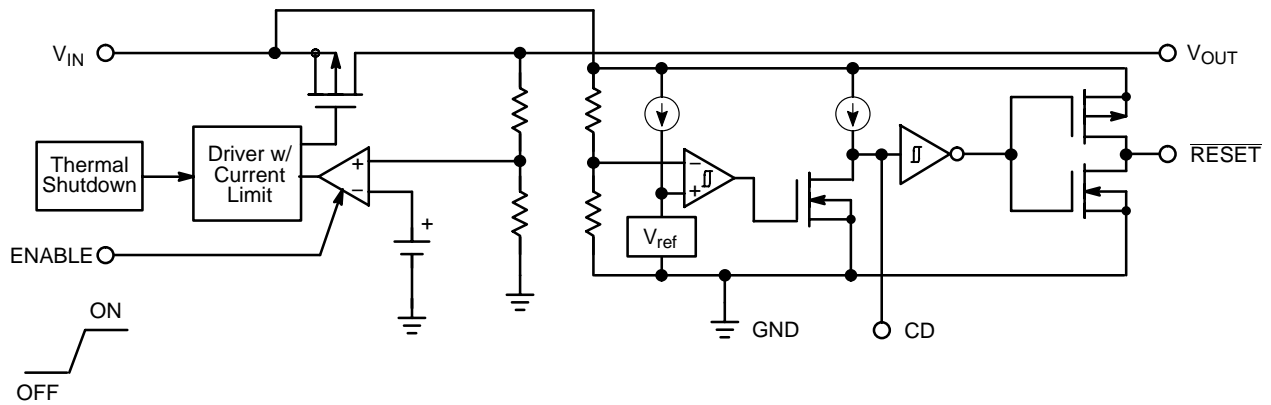

Figure 2. Representative Block Diagram

# NCP400

## ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage	$V_{IN}$	0 to 5.5	V
Enable Voltage	ENABLE	-0.3 to $V_{IN}+0.3$	V
Output Voltage	$V_{OUT}$	-0.3 to $V_{IN}+0.3$	V
Delay Capacitor Pin Voltage	$V_{CD}$	-0.3 to $V_{IN}+0.3$	V
Reset Pin Voltage	$V_{reset}$	-0.3 to $V_{IN}+0.3$	V
Reset Pin Current	$I_{reset}$	70	mA
Power Dissipation and Thermal Characteristics for Microbump-6 Thermal Resistance Junction-to-Air (Note 3)	$R_{\theta JA}$	Refer to Figure 22	°C/W
Operating Junction Temperature	$T_J$	-40 to +125	°C
Operating Ambient Temperature	$T_A$	-40 to +85	°C

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

1. This device contains ESD protection and exceeds the following tests:  
Human Body Model (HBM)  $\pm 2000$  V per MIL-STD-883, Method 3015  
Machine Model (MM)  $\pm 200$  V.
2. Latchup capability (85°C) 100 mA DC with trigger voltage.
3. PCB top layer uses a single copper layer and is tested @ 250 mW.

OPERATION DESCRIPTION

**Low Dropout Voltage Regulator**

The low dropout voltage regulator contains a voltage reference unit, an error amplifier, a PMOS power transistor, resistors for setting output voltage, current limit and thermal shutdown protection circuits.

**Enable Operation**

The enable pin will turn on or off the regulator. The limits of threshold are covered in the electrical specification section of this data sheet. If the enable is not used then the pin should be connected to  $V_{in}$ .

**Voltage Detector**

The NCP400 consist of a precision voltage detector that drives a time delay generator. Figures 23 and 24 show a timing diagram and a typical application. Initially consider that input voltage  $V_{in}$  is at a nominal level and it is greater than the voltage detector upper threshold ( $V_{DET+}$ ). The

voltage at CD Pin (Pin 4) will be at the same level as  $V_{in}$ , and the reset output (Pin 3) will be in the high state. If there is a power interruption and  $V_{in}$  becomes significantly deficient, it will fall below the lower detector threshold ( $V_{DET-}$ ) and the external time delay capacitor CD will be immediately discharged by an internal N-Channel MOSFET that connects to Pin 4. This sequence of events causes the Reset output to be in the low state. After completion of the power interruption,  $V_{in}$  will again return to its nominal level and become greater than the  $V_{DET+}$ . The voltage detector will turn off the N-Channel MOSFET and allow internal current source to charge the external capacitor CD, thus creating a programmable delay for releasing the reset signal. When the voltage at CD Pin 4 exceeds the inverter threshold, typically 0.97 V, the reset output will revert back to its original state. The detail reset output time delay calculation is shown in Figure 24.

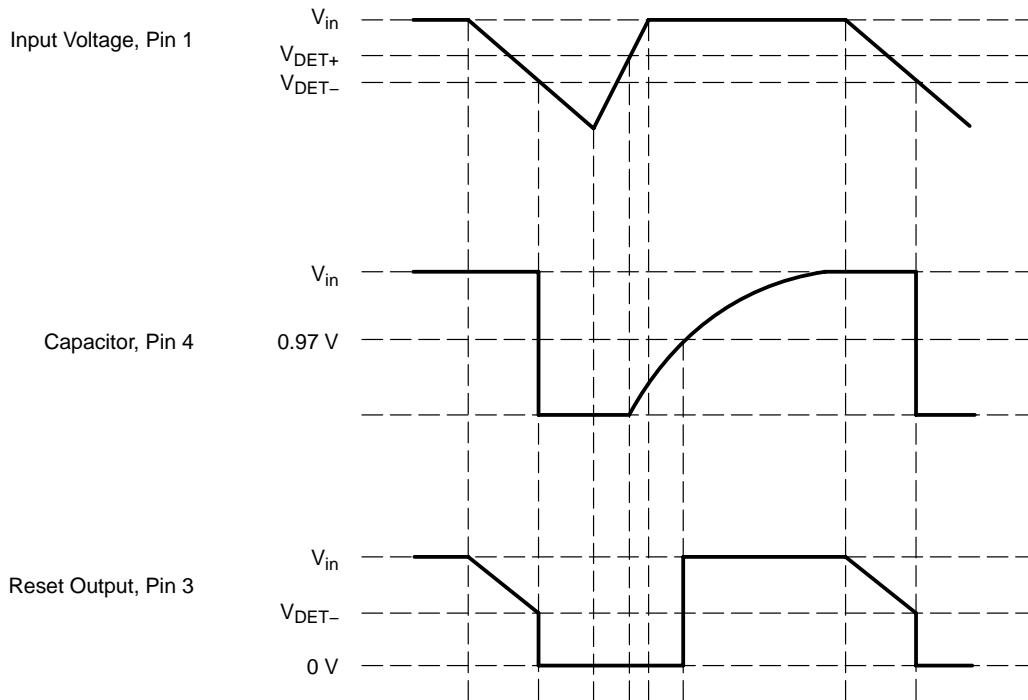

Figure 23. Timing diagram

# NCP400

## APPLICATION NOTES

Figure 24. Timing Diagram

$$\text{Delay Time: } (\Delta t) = \frac{(C \times \Delta V_{ThCD})}{I_{CD}}$$

where:  $C$  is the CD pin capacitor  
 $\Delta V_{ThCD}$  is the delay threshold voltage  
 $I_{CD}$  is delay current source.

As target use  $C = 3300\text{ pF}$  and have  $\Delta t = 2\text{ ms}$ :

With internal  $\Delta V_{ThCD} = 0.97\text{ V}$  and  $I_{CD} = 1.56\text{ }\mu\text{A}$ , then

$$\Rightarrow \text{Delay Time: } (\Delta t) = \frac{(3300\text{ pF} \times 0.97\text{ V})}{1.56\text{ }\mu\text{A}} = 2.05\text{ ms}$$

# NCP400

## APPLICATION INFORMATION

### Low Dropout Voltage Regulator

#### –Input Decoupling

A 1.0  $\mu\text{F}$  capacitor either ceramic or tantalum is recommended and should be connected close to the NCP400 package. Higher values and lower ESR will improve the overall line transient response.

#### –Output Decoupling

The NCP400 is a stable Regulator and does not require any specific Equivalent Series Resistance (ESR) or a

minimum output current. Capacitors exhibiting ESRs ranging from a few  $\text{m}\Omega$  up to  $10\ \Omega$  can thus safely be used. The minimum decoupling value is  $1.0\ \mu\text{F}$  and can be augmented to fulfill stringent load transient requirements. The regulator accepts ceramic chip capacitors as well as tantalum devices. Larger values improve noise rejection and load regulation transient response. Figure 25 shows the stable area of the regulator with different output capacitor ESR and output current.

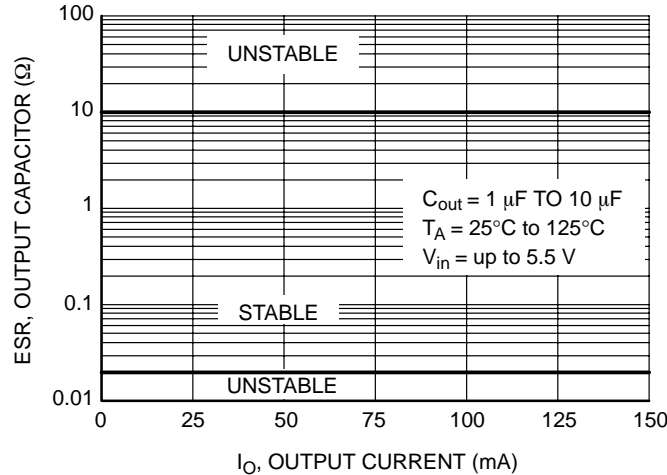

Figure 25. Output Capacitor versus Output Current

#### –Thermal Protection

Internal thermal shutdown circuit is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. When the thermal protection activated, higher than  $150^\circ\text{C}$ , the regulator turns off. This feature is provided to prevent failures from accidental overheating.

#### –Hints

Please be sure the  $V_{in}$  and GND lines are sufficiently wide. When the impedance of these lines is high, there is a chance to pick up noise or cause the regulator to

malfunction. Set external components, especially the output capacitor, as close as possible to the circuit, and make leads a short as possible.

#### Voltage Detector

The voltage detector has built-in hysteresis to prevent erratic reset operation. This device is specifically designed for use as reset controllers in portable microprocessor based systems, it can offer a cost-effective solution in numerous applications where precise voltage monitoring and time delay are required. Figures 26 through 27 shows various application examples.
