Low Voltage 5-Bit Self-Timed, Single-Wire Output Expander

Check for Samples: TCA5405

FEATURES

- **Operating Power-Supply Voltage Range of 1.65 V to 3.6 V**
- **Five Independent Push-Pull Outputs**
- **Single Input (DIN) Controls State of All Outputs**
- **High-Current Drive Outputs Maximum Capability for Directly Driving LEDs**
- **Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II**
- **ESD Protection Exceeds JESD 22**
  - **2000-V Human-Body Model (A114-A)**
  - **1000-V Charged-Device Model (C101)**

APPLICATIONS

- **Cell Phones**
- **PDAs**
- **Portable Media Players**
- **MP3 Players**
- **Portable Instrumentation**

DESCRIPTION

The TCA5405 is a 5-bit output expander controlled using a single wire input. This device is ideal for portable applications as it has a wide VCC range of 1.65V to 3.6 V. The TCA5405 uses a self-timed serial data protocol with a single data input driven by a master device synchronized to an internal clock of that device. During a Setup phase, the bit period is sampled, then the TCA5405 generates its own internal clock synchronized to that of the Master device to sample the input over a five-bit-period Data Transfer phase and writes the bit states on the parallel outputs after the last bit is sampled. The TCA5405 is available in an 8-pin 1.5mm x 1.5mm RUG uQFN package.

ORDERING INFORMATION

T_A	PACKAGE(1)		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	uQFN – RUG	Tape and Reel	TCA5405RUGR	6Y

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

APPLICATION DIAGRAM

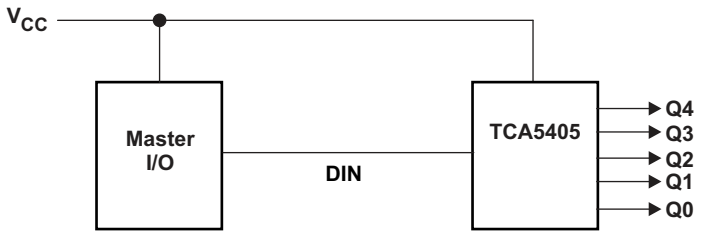

Figure 1. TCA5405 Application Diagram

ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		–0.5	4.0	V
V_I	Input voltage range(2)		–0.5	4.0	V
V_O	Output voltage range(2)		–0.5	4.0	V
I_{IK}	Input clamp current	$V_I < 0$		±20	mA
I_{OK}	Output clamp current	$V_O < 0$		±20	mA
I_{OL}	Continuous output low current	$V_O = 0$ to V_{CC}		50	mA
I_{OH}	Continuous output high current	$V_O = 0$ to V_{CC}		50	mA
I_{CC}	Continuous current through GND			200	mA
	Continuous current through V_{CC}			160	
ΘJA	Package thermal impedance(3)	RUG package		243	°C/W
TSTG	Storage temperature range		–65	150	°C

(1) Stresses above these ratings may cause permanent damage. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.
(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
(3) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

			MIN	MAX	UNIT
V_{CC}	Supply voltage		1.65	3.6	V
V_{IH}	High-level input voltage	DIN	0.7 × V_{CC}	V_{CC} + 0.5	V
V_{IL}	Low-level input voltage	DIN	–0.3	0.3 × V_{CC}	V
I_{OH}	High-level output current	Q0–Q4		20	mA
I_{OL}	Low-level output current	Q0–Q4		20	mA
T_A	Operating free-air temperature		–40	85	°C

ELECTRICAL CHARACTERISTICS

over recommended operating free-air temperature range, V_{CC} = 1.65 V to 3.6 V (unless otherwise noted)

PARAMETER		TEST CONDITIONS	V_{CC}	MIN	TYP	MAX	UNIT
V_{IK}	Input diode clamp voltage	I_I = –18 mA	1.65 V to 3.6 V	–1.2			V
V_{POR}	Power on reset voltage	$V_I = V_{CC}$ or GND, I_O = 0	1.65 V to 3.6 V		1	1.4	V
I_I	DIN	$V_I = V_{CC}$ or GND	1.65 V to 3.6 V			±0.1	µA
I_{CC_STBY}	Standby Supply Current	V_I on DIN = V_{CC} or GND, I_O = 0	1.65 V to 3.6 V		1	2	µA
I_{CC_ACTIVE}	Active current during startup and data transfer					400	µA
C_I	DIN	$V_I = V_{CC}$ or GND	1.65 V to 3.6 V		6	7	pF
V_{OH}	OUT-port high-level output voltage	I_{OH} = –20 mA	1.65 V	1.1			V
			2.3 V	1.7			
			3.6 V	2.5			
V_{OL}	OUT-port low-level output voltage	I_{OL} = 20 mA	1.65 V			0.6	V
			2.3 V			0.3	
			3.6 V			0.25	

TIMING REQUIREMENTS

over recommended operating free-air temperature range, V_{CC} = 1.65 V to 3.6 V (unless otherwise noted)

PARAMETER		TEST CONDITIONS	VCC	MIN	TYP	MAX	UNIT
t_{PER}	DIN period		1.65 V to 3.6 V	0.001		10	ms
t_{rise}	DIN rise time		1.65 V to 3.6 V			100	ns
t_{fall}	DIN fall time		1.65 V to 3.6 V			100	ns
f_{MIN}	Maximum switching frequency on DIN		1.65 V to 3.6 V	1			MHz
f_{MAX}	Minimum switching frequency on DIN		1.65 V to 3.6 V			10	kHz

PRINCIPLES OF OPERATION

The TCA5405 single-wire bus device has a single-bit Data Line Bus input and has five independent parallel push-pull buffered outputs. A single input is used to control the output state for the writing to these five outputs. This single-wire serial interface is similar to a UART type interface but operates over a wide range of values for the bit period.

The TCA5405 uses a self-timed serial data protocol with a single data input driven by a master device synchronized to an internal clock of that device. During a Setup phase, the bit period is sampled, then the TCA5405 generates its own internal clock synchronized to that of the Master device to sample the input over a five-bit-period Data Transfer phase and writes the bit states on the parallel outputs after the last bit is sampled. The Master output bit must be transmitted via a Totem-pole output structure to ensure proper interpretation of the incoming serial burst.

The single-wire unidirectional interface operation is defined in Figure 2.

INTERFACE TIMING

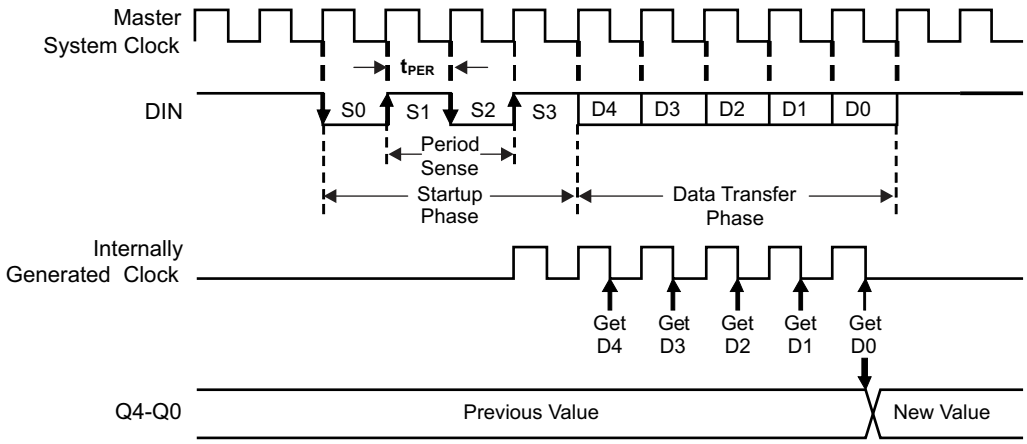

Figure 2. Definition of Single-Wire Interface

To function correctly, the bit period (tPER) of the DIN signal must be constant over the entire data transaction. Therefore, DIN should be driven by a stable periodic signal internal to the Master device (see Figure 2 - Master System Clock). The bit period can be any value between 1µS and 10mS.

The TCA5405 first detects the falling transition on DIN at the beginning of the S0 period to signal the start of an incoming data burst. Next, over the period of S1 and S2, between the two rising edges on DIN, a timer measures the duration of S1/S2 to calculate the bit period of the incoming signal. After that, the TCA5405 uses that value to generate its own internal clock which it uses to sample DIN as near as possible to the center of the subsequent D4-D0 bit periods. After bit D0 is sampled, the five sampled values are sent to the Q4-Q0 outputs. At the end of the D0 bit period, if DIN is not already high, it must be set high to signal the end of the transaction and to prepare for the next one.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TCA5405RUGR	ACTIVE	X2QFN	RUG	8	3000	RoHS & Green	NIPDAUAG	Level-1-260C-UNLIM	-40 to 85	6Y	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

TAPE AND REEL INFORMATION
