### **DESCRIPTION**

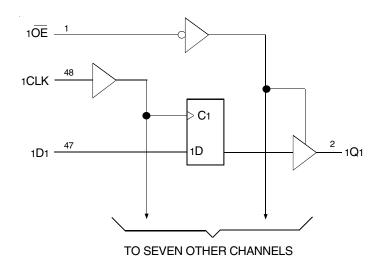

The LVCH16374A 16-bit edge-triggered D-type register is built using advanced dual metal CMOS technology. This high-speed, low-power register is ideal for use as a buffer register for data synchronization and storage. The Output Enable  $(\overline{OE})$  and clock (CLK) controls are organized to operate each device as two 8-bit registers or one 16-bit register with common clock. Flow-through organization of signal pins simplifies layout. All inputs are designed with hysteresis for improved noise margin.

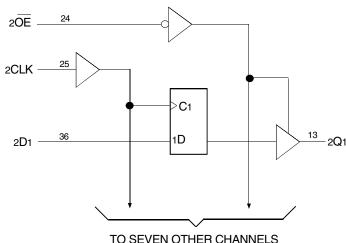

All pins of the LVCH16374A can be driven from either 3.3V or 5V devices. This feature allows the use of this device as a translator in a mixed 3.3V/5V supply system.

The LVCH16374A has been designed with a  $\pm 24$ mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

The LVCH16374A has "bus-hold" which retains the inputs' last state whenever the input goes to a high impedance. This prevents floating inputs and eliminates the need for pull-up/down resistors.
