

Item # 26100-255, 720p HD CCD Camera

720p HD CCD Camera

The importance of inspection in HD.

The 720p HD Camera, with its Sony® 1/3" CCD sensor and quick connection to a monitor or flat screen for image viewing, has a simple plug and play HDMI interface.

The ultra fast refresh rate of up to 60fps allows the user to manipulate the specimen without the image blur and delay common with other cameras. The crisp, true to life, images produce stunning color replication and geometry. It is a great choice for industries that need a brilliant image to examine multiple minute aspects of a specimen as efficiently as possible. The 720p also offers a remote control attachment to gain further control of the image output.
