

Evaluation Board for the **AD5161** Digital Potentiometer

FEATURES

- Full featured evaluation board used in conjunction with low voltage digiPOT motherboard (EVAL-MB-LV-SDZ)
- Multiple test circuits
- Multiple ac/dc input signals
- PC control via a separately purchased system demonstration platform (SDP-B or SDP-S)
- PC software for control

EVALUATION KIT CONTENTS

- EVAL-AD5161DBZ** evaluation board
- EVAL-MB-LV-SDZ motherboard
- CD that includes
 - Self-installing software that allows users to control the board and exercise all functions of the device
 - Electronic version of the **AD5161** data sheet
 - Electronic version of the **EVAL-AD5161DBZ** user guide

GENERAL DESCRIPTION

This user guide describes the evaluation boards for evaluating the **AD5161**, a 256-position SPI-/I²C-selectable digital potentiometer. The **AD5161** supports single-supply 2.7 V to 5.5 V operation, making the device suitable for battery-powered applications and many applications requiring superior low temperature coefficient performance.

In addition, the **AD5161** has a pin-selectable SPI- or I²C-compatible digital interface, which can be used to control the wiper settings or to read back the wiper register content. In SPI mode, the device can be daisy-chained (SDO to SDI), allowing several parts to share the same control lines. In I²C mode, Address Pin AD0 can be used to place up to two devices on the same bus. In this same mode, command bits are available to reset the wiper position to midscale or to shut down the device into a state of zero power consumption.

The **EVAL-AD5161DBZ** daughter board and the EVAL-MB-LV-SDZ motherboard can operate in single-supply mode and incorporate an internal power supply from the USB.

Complete specifications for the **AD5161** can be found in the **AD5161** data sheet, which is available from www.analog.com and should be consulted in conjunction with this user guide when using the evaluation board.

REVISION HISTORY

12/13—Revision 0: Initial Version

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The EVAL-MB-LV-SDZ supports using single power supplies.

The evaluation board can be powered either from the SDP port or externally by the J1 and J2 connectors, as described in Table 1.

All supplies are decoupled to ground using 10 μ F and 0.1 μ F ceramic capacitors.

LINK OPTIONS

Several link and switch options are incorporated on the EVAL-MB-LV-SDZ and [EVAL-AD5161DBZ](#) boards and must be set up before using the evaluation system. The functions of these link options are described in detail in Table 2 through Table 6. By default, the evaluation system is set up to be controlled by a PC via the SDP board.

DIGITAL INTERFACE

The [EVAL-AD5161DBZ](#) can be configured as an I²C or SPI digital interface, depending on the position of the P9 jumper. If the device is configured in I²C mode, the P10 jumper selects the I²C address. See Table 3 for further details.

Table 1. Connector Functions

Connector No.	Label	Description	Voltage	
			Min	Max
J1-1	VDD	Analog positive power supply, V _{DD}	2.7 V	5.5 V
J1-2	AGND	Analog ground		
J2-1	VLOGIC	Digital supply	2.7 V	V _{DD}
J2-2	DGND	Digital ground		

Table 2. Link Functions

Link No.	Power Supply	Options	Default Position
A5	V _{LOGIC}	Digital supply select options: 3.3 V (from the SDP board) VLOGIC EXT (external supply from the J2 connector)	3.3 V
A11	V _{DD}	Positive power supply select options: 5 V (from the SDP board) 3.3 V (from the SDP board) VDD (external supply from the J1 connector)	3.3 V
A12	GND	AGND	AGND

Table 3. Digital Interface Link Functions

Link No.	Options	Default Position
P9	Digital interface select options: SPI (use SPI digital interface). I ² C (use I ² C digital interface).	SPI
P10	Chip select options (I ² C mode only): Left side: address pin is connected to AGND. Right side: address pin is connected to V _{LOGIC} . This jumper is unused in SPI mode.	Left

TEST CIRCUITS

The EVAL-AD5161DBZ and EVAL-MB-LV-SDZ incorporate several test circuits to evaluate the performance of the AD5161.

DAC

The RDAC can be operated as a digital-to-analog converter (DAC), as shown in Figure 2.

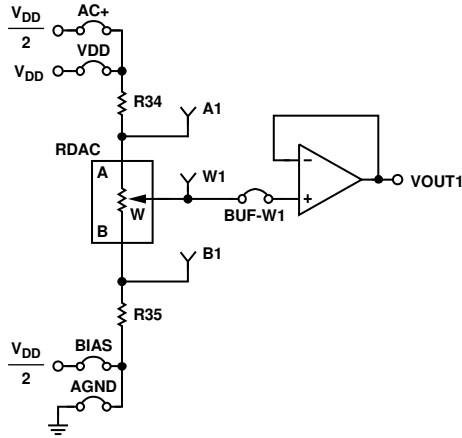

Figure 2. DAC

Table 5 shows the options available for the voltage references.

The output voltage is defined in Equation 1.

$$V_{OUT} = (V_A - V_B) \times \frac{RDAC}{256} \tag{1}$$

where:

RDAC is the code loaded in the RDAC register.

V_A is the voltage applied to the A terminal (A9 link).

V_B is the voltage applied to the B terminal (A10 link).

However, by using the R34 and R35 external resistors, you can reduce the voltage of the voltage references. In this case, use the A1 and B1 test points to measure the voltage applied to the A and B terminals and recalculate V_A and V_B in Equation 1.

AC Signal Attenuation

The RDAC can be used to attenuate an ac signal, which must be provided externally using the AC_INPUT connector, as shown in Figure 3.

Figure 3. AC Signal Attenuator

Depending on the voltage supply rails and the dc offset voltage of the ac signal, various configurations can be used, as described in Table 4.

Table 4. AC Signal Attenuation Link Options

Link	Options	Conditions
A9	AC+	No dc offset voltage. AC signal is outside the voltage supply rails due to the dc offset voltage. DC offset voltage ≠ V _{DD} /2. ¹
	AC	All other conditions.
A10	BIAS AGND	Use in conjunction with AC+ link. ¹ All other conditions.

¹ Recommended to ensure optimal total harmonic distortion (THD) performance.

The signal attenuation is defined in Equation 2.

$$Attenuation \text{ (dB)} = 20 \times \log \left(\frac{R_{WB} + R_W}{R_{END-TO-END}} \right) \tag{2}$$

where:

R_{WB} is the resistance between the W and B terminals.

R_W is the wiper resistance.

R_{END-TO-END} is the end-to-end resistance value.

Table 5. DAC Voltage References

Terminal	Link Settings		Description
	Daughter Board	Motherboard	
A1	P5: A1 position	A9: AC+ position A9: VDD position	Connects Terminal A1 to V _{DD} /2 Connects Terminal A1 to V _{DD}
W1	P6: W1 position	BUF-W1: inserted	Connects Terminal W1 to an output buffer
B1	P7: B1 position	A10: BIAS position A10: AGND position	Connects Terminal B1 to V _{DD} /2 Connects Terminal B1 to analog ground
	P8: inserted		Closes the feedback loop of the second op amp in the AD8618

Signal Amplifier

The RDAC can be operated as an inverting or noninverting signal amplifier and can support linear or pseudologarithmic gain. Table 6 shows the available configurations.

The noninverting amplifier with linear gain is shown in Figure 4, and the gain is defined in Equation 3.

$$G = 1 + \frac{R_{WB}}{R_{38}} \tag{3}$$

where R_{WB} is the resistance between the W and B terminals.

Figure 4. Noninverting Amplifier with Linear Gain

The noninverting amplifier with pseudologarithmic gain is shown in Figure 5, and the gain is defined in Equation 4.

$$G = 1 + \frac{R_{WB}}{R_{AW}} \tag{4}$$

where:

R_{WB} is the resistance between the W and B terminals.

R_{AW} is the resistance between the A and W terminals.

Figure 5. Noninverting Amplifier with Pseudologarithmic Gain

R43 and R42 can be used to set the maximum and minimum gain limits.

The inverting amplifier with linear gain is shown in Figure 6, and the gain is defined in Equation 5.

$$G = -\frac{R_{WB}}{R_{38}} \tag{5}$$

where R_{WB} is the resistor between the W and B terminals.

Note that the input signal, V_{IN} , must be negative.

NOTES
1. THE INPUT SIGNAL, V_{IN} , MUST BE NEGATIVE.

Figure 6. Inverting Amplifier with Linear Gain

Table 6. Amplifier Selection Link Settings

Amplifier	Gain	Link Settings		V_{IN} Range
		Daughter Board	Motherboard	
Noninverting	Linear	P5: A2 position, P6: W2 position, P7: B2 position, P8: not inserted	A7: LIN position, A6: N-INV position, A8: N-INV position	0 V to V_{DD}
	Pseudologarithmic	P5: A2 position, P6: W2 position, P7: B2 position, P8: not inserted	A7: LOG position, A6: N-INV position, A8: N-INV position	0 V to V_{DD}
Inverting	Linear	P5: A2 position, P6: W2 position, P7: B2 position, P8: not inserted	A7: LIN position, A6: INV position, A8: INV position	$-V_{DD}$ to 0 V

EVALUATION BOARD SOFTWARE

INSTALLING THE SOFTWARE

The [EVAL-AD5161DBZ](#) kit includes evaluation board software provided on a CD. The software is compatible with Windows® XP, Windows Vista, and Windows 7 (both 32-bit and 64-bit versions).

Install the software before connecting the [SDP board](#) to the USB port of the PC to ensure that the SDP board is recognized when it is connected to the PC.

1. Start the Windows operating system and insert the CD.
2. The installation software opens automatically. If it does not, run the **setup.exe** file from the CD.
3. After the installation is complete, power up the evaluation board as described in the Power Supplies section.
4. Connect the [EVAL-AD5161DBZ](#) and EVAL-MB-LV-SDZ to the SDP board and the SDP board to the PC.
5. When the software detects the evaluation board, follow the instructions that appear to finalize the installation.

RUNNING THE SOFTWARE

To run the program, do the following:

1. Click **Start > All Programs > Analog Devices > AD5161 > AD5161 Eval Board**. (To uninstall the program, click **Start > Control Panel > Add or Remove Programs > AD5161 Eval Board**.)

2. If the SDP board is not connected to the USB port when the software is launched, a connectivity error displays (see Figure 7). If a connectivity error is displayed, connect the evaluation board to the USB port of the PC and wait a few seconds, and then click **Rescan** and follow the instructions that appear on-screen.

Figure 7. Pop-Up Window Error

The main window of the [EVAL-AD5161DBZ](#) software then opens, as shown in Figure 8.

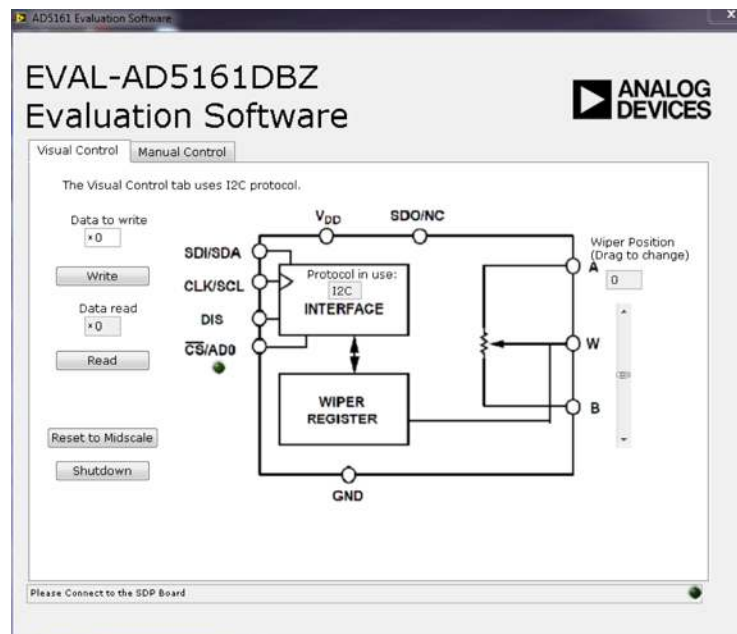

Figure 8. [EVAL-AD5161DBZ](#) Software Main Window, Visual Control Tab

OPERATING THE SOFTWARE

The main window of the EVAL-AD5161DBZ software is divided into two tabs: **Visual Control** and **Manual Control**.

Visual Control Tab

The **Visual Control** tab, as shown in Figure 8, contains a block diagram that allows inputting data in hexadecimal format to be written to or read from the device. To write data to the device, type a hexadecimal value into the **Data to write** box and click **Write**. To read data from the device, click **Read**; the data is displayed in hexadecimal format in the **Data read** box. A slider control, located on the right side of the window, allows changing the wiper setting.

Manual Control Tab

The **Manual Control** tab, as shown in Figure 9, allows customizing an I²C or SPI data-word by manually switching each serial data-word from 0 to 1 or from 1 to 0, as desired, and then clicking **I2C Write** or **SPI Write/Read**. Similarly, data can also be read from either I²C or SPI using the corresponding controls.

The **I2C Data Written** or **SPI Data Written** box shows the value that is written to the evaluation board. It is set using the sliders in the **I2C - Write** or **SPI - Write / Read** section.

Exiting the window closes the program.

¹ FEC refers to Farnell Electronic Component Distributors.

NOTES

I²C refers to a communications protocol originally developed by Philips Semiconductors (now NXP Semiconductors).

**ESD Caution**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
