

## Series Impedance Film Capacitors Radial Potted Type

### APPLICATIONS

Based on long term capacitance stability and good self-healing properties, these capacitors are intended for applications in series with the mains acting as voltage-dividing impedance.

These capacitors are not allowed to be used as across-the-line capacitors.

### REFERENCE SPECIFICATIONS

IEC 60384-14

### PERFORMANCE GRADE

Grade 1 (long life)

### MARKING

C-value, tolerance, rated voltage, manufacturer's type, code for dielectric material, manufacturer's location, manufacturer's logo, year and week

### DIELECTRIC

Polyester film <sup>(1)</sup>

### ELECTRODES

Metallized electrodes

### CONSTRUCTION

Series construction

### RATED AC VOLTAGE

AC 275 V; 50 Hz to 60 Hz

### PERMISSIBLE DC VOLTAGE

DC 400 V

### Notes

<sup>(1)</sup> For pitch = 15 mm, C < 15 nF, dielectric is polypropylene

<sup>(2)</sup> 27.5 mm pitch parts - in progress

### FEATURES

- 10 mm to 27.5 mm lead pitch <sup>(2)</sup>
- Supplied loose in box, taped on ammpack or reel
- Compliant to RoHS Directive 2002/95/EC

**RoHS**  
COMPLIANT

### ENCAPSULATION

Plastic case, epoxy resin sealed, flame retardant (UL-class 94 V-0)

### CLIMATIC TESTING CLASS ACC. TO IEC 60068-1

55/105/56/B

### CAPACITANCE RANGE AND TOLERANCE <sup>(2)</sup>

E6 series 0.01 µF to 2.2 µF, tolerance ± 20 %

E12 series 0.01 µF to 2.2 µF, tolerance ± 10 % and ± 5 %

Preferred values acc. to E6

### LEADS

Tinned wire

### RATED TEMPERATURE

110 °C

### MAXIMUM APPLICATION TEMPERATURE

105 °C

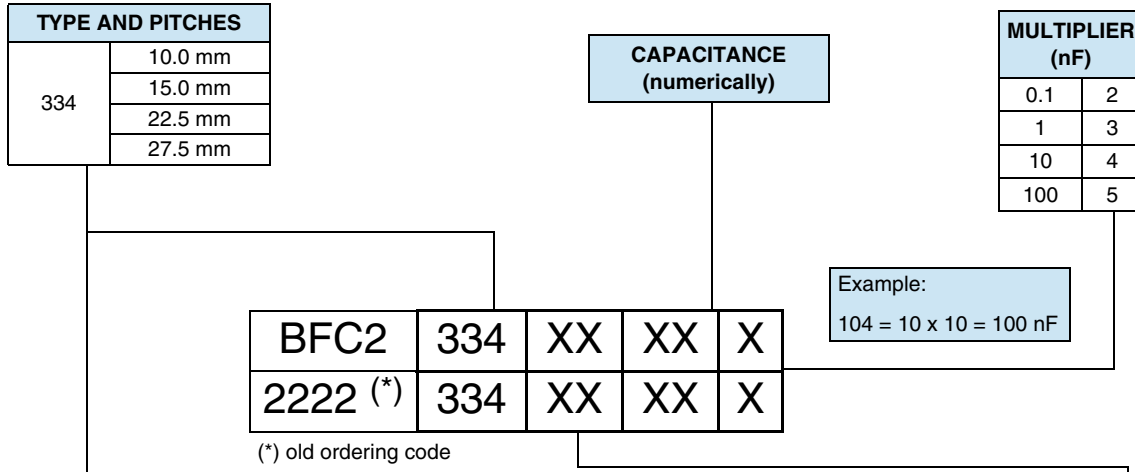

### DETAIL SPECIFICATION

For more detailed data and test requirements contact:

**SPECIFIC REFERENCE DATA**

DESCRIPTION	VALUE
Rated AC voltage ( $U_{RAC}$ )	275 V
Permissible DC voltage ( $U_{RDC}$ )	400 V
Tangent of loss angle:	<b>AT 1 kHz</b> <b>AT 10 kHz</b>
$C \leq 0.1 \mu F$	$\leq 75 \times 10^{-4}$ $\leq 110 \times 10^{-4}$
$0.1 \mu F < C \leq 0.47 \mu F$	$\leq 75 \times 10^{-4}$ $\leq 120 \times 10^{-4}$
$0.47 \mu F < C \leq 2.2 \mu F$	$\leq 75 \times 10^{-4}$ $\leq 150 \times 10^{-4}$
Rated voltage pulse slope ( $dU/dt$ ) <sub>R</sub> at 400 V <sub>DC</sub>	
$l_{max.} = 12.5 \text{ mm}$	200 V/ $\mu s$
$l_{max.} = 17.5 \text{ mm}$	100 V/ $\mu s$
$l_{max.} = 26.0 \text{ mm}$	70 V/ $\mu s$
$l_{max.} = 31.0 \text{ mm}$	55 V/ $\mu s$
R between leads, for $C \leq 0.33 \mu F$ : at 100 V, 1 min	> 30 000 M $\Omega$
RC between leads, for $C > 0.33 \mu F$ : at 100 V, 1 min	> 10 000 s
R between interconnecting leads and casing: at 100 V, 1 min	> 30 000 M $\Omega$
Withstanding (DC) voltage (cut off current 10 mA) <sup>(1)</sup> , rise time $\leq 1000 \text{ V/s}$	720 V; 1 min
Withstanding (AC) voltage between leads and case	2050 V; 1 min
Maximum application temperature	105 °C

## MOUNTING

### Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.

For detailed tape specification refer to "Packaging Information" [www.vishay.com/doc?28139](http://www.vishay.com/doc?28139)

### Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that the stand-off pips are in good contact with the printed-circuit board:

- For pitches  $\leq 15$  mm capacitors shall be mechanically fixed by the leads
- For larger pitches the capacitors shall be mounted in the same way and the body clamped

### Space Requirements on Printed Circuit Board

The maximum space for length ( $l_{max.}$ ), width ( $w_{max.}$ ) and height ( $h_{max.}$ ) of film capacitors to take in account on the printed-circuit board is shown in the drawings.

- For products with pitch  $\leq 15$  mm,  $\Delta w = \Delta l = 0.3$  mm;  $\Delta h = 0.1$  mm
- For products with  $15$  mm  $<$  pitch  $\leq 27.5$  mm,  $\Delta w = \Delta l = 0.5$  mm;  $\Delta h = 0.1$  mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.

## SOLDERING CONDITIONS

For general soldering conditions and wave soldering profile, we refer to the application note:

"Soldering Guidelines for Film Capacitors": [www.vishay.com/doc?28171](http://www.vishay.com/doc?28171)

### Storage Temperature

- Storage temperature:  $T_{stg} = -25$  °C to  $+40$  °C with RH maximum 80 % without condensation

### Ratings and Characteristics Reference Conditions

Unless otherwise specified, all electrical values apply to an ambient temperature of  $23$  °C  $\pm 1$  °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of  $50$  %  $\pm 2$  %.

For reference testing, a conditioning period shall be applied over  $96$  h  $\pm 4$  h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

**CHARACTERISTICS**

Capacitance change as a function of free air temperature (typical curve)

Capacitance change as a function of frequency (typical curve)

Tangent of loss angle as a function of frequency (typical curves)

Insulation resistance (RC) as a function of ambient free air temperature (typical curve)

Max. RMS voltage (sine wave) as a function of frequency at  $T_{amb} \leq 105^\circ\text{C}$

**APPLICATION NOTES**

- These capacitors are suitable for the application as voltage-division impedance in series with the mains (50 Hz/60 Hz) with a maximum mains voltage of  $U_{RAC}$ .
- For capacitors connected in parallel, normally the proof voltage and possibly the rated voltage must be reduced. For information depending of the capacitance value and the number of parallel connections contact: [dc-film@vishay.com](mailto:dc-film@vishay.com)
- These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described under item 7. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.
- The peak voltage ( $U_p$ ) shall not be greater than the permissible DC voltage ( $U_{RDC}$ ).
- The peak-to-peak voltage ( $U_{p-p}$ ) shall not be greater than  $2 \sqrt{2} \times U_{RAC}$  to avoid the ionization inception level.
- The voltage peak slope ( $dU/dt$ ) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by  $U_{RDC}$  and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left( \frac{dU}{dt} \right)^2 \times dt < U_{RDC} \times \left( \frac{dU}{dt} \right)_{rated}$$

- T is the pulse duration
- The rated voltage pulse slope is valid for ambient temperatures up to 105 °C.
- The maximum component surface temperature must be lower than 105 °C.
- Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in the table: "Heat conductivity". This is normally fulfilled by the impedance of the device in series with capacitor or by an additional resistor.

**HEAT CONDUCTIVITY (G) AS A FUNCTION OF (ORIGINAL) PITCH AND CAPACITOR BODY THICKNESS IN mW/°C**
