

100304

Low Power Quint AND/NAND Gate

The 100304 is monolithic quint AND/NAND gate. The Function output is the wire-NOR of all five AND gate out-puts. All inputs have 50 k Ω pull-down resistors.

Rochester Electronics
Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer (OCM).

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

Features

Low Power Operation

■ 2000V ESD protection

(PLCC package only)

■ Pin/function compatible with 100104

Voltage compensated operating range = -4.2V to -5.7V
Available to industrial grade temperature range

Absolute Maximum Ratings(Note 1)

Storage Temperature (T _{STG})	$-65^{\circ}C$ to $+150^{\circ}C$
Maximum Junction Temperature (T_J)	+150°C
V _{EE} Pin Potential to Ground Pin	-7.0V to +0.5V
Input Voltage (DC)	V_{EE} to +0.5V
Output Current (DC Output HIGH)	–50 mA
ESD (Note 2)	≥2000V

Recommended Operating Conditions

Case Temperature (T _C)	
Commercial	$0^{\circ}C$ to $+85^{\circ}C$
Industrial	$-40^{\circ}C$ to $+85^{\circ}C$
Supply Voltage (V _{EE})	-5.7V to -4.2V

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: ESD testing conforms to MIL-STD-883, Method 3015.

Note 3: The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.
