EVQ6526-U-00A 0.9A, 28V Six Half-Bridge Motor Driver **Evaluation Board**

The Future of Analog IC Technology

DESCRIPTION

The MPQ6526 is a six half-bridge DMOS output driver with integrated power MOSFETs. It can drive up to six different loads. The input voltage ranges from 7V to 28V, with the up to 0.9A output current capability.

The six half-bridges of MPQ6526 can be controlled separately from a standard serial data interface, and have various diagnostic functions. It has very low quiescent current in standby mode make a wide range of applications possible.

Fully protection includes short-circuit protection, under-voltage protection and thermal shutdown.

ELECTRICAL SPECIFICATIONS

Parameter		Symbol	Value	Units
Input Voltage	•	V_{IN}	7 – 28	V
Maximum Current	Output	I _{OUT-L}	0.9	Α

FEATURES

- Wide 7V to 28V Operating Input Range
- Up to 0.9A Output Current for Each Channel
- Total Max Current 2.4A (all outputs combined)
- Rdson (HS + LS) Typically 1.1Ω at 25°C, Maximum 2Ω at 150°C
- Very Low Quiescent Current I_{VS} < 6μA in Standby Mode Versus Total Temperature Range
- Serial Data Interface
- Short-Circuit Protection
- Under-Voltage Protection

APPLICATIONS

- Drive various loads automotive and industrial applications
- DC Motors

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS' and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

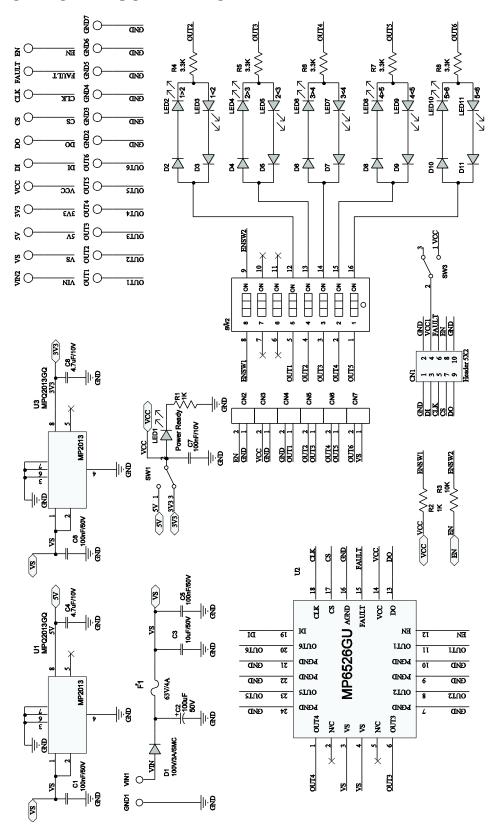

EVQ6526-U-00A EVALUATION BOARD

QUICK START GUIDE

1. Power Requirements

a. Power supply range: 7V to 28V, 3A Max.

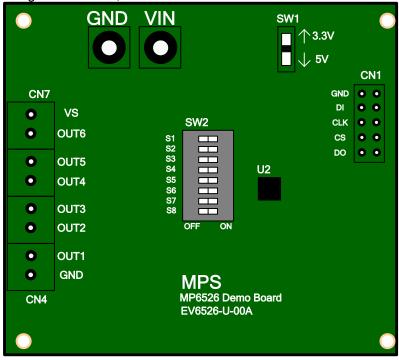

Figure 3 — EVQ6526-U-00A Bird's-eye View

2. Setup Condition

- a. Adjust the power supply VIN with recommended operating range (7V to 28V).
- b. Input for VCC power supply is on board (5V or 3.3V, use SW1 to adjust).
- c. Easy adaptation of loads by CN4 CN7.
- d. EN alternatively connected to VCC or GND, selected by S8 of SW2.
- e. Serial data interface control via CN1 connectors.

3. Monitors

- a. For full-bridge application, indicate rotation direction of DC motors can be observed by LEDs if S1 S5 of SW2 switches ON position.
 - b. All pins are easily accessible via test points.
- c. A low output at FAULT indicates that the IC has detected an over-temperature or over-current condition.
