

LVD SCSI 27-Line Regulator

DS2129

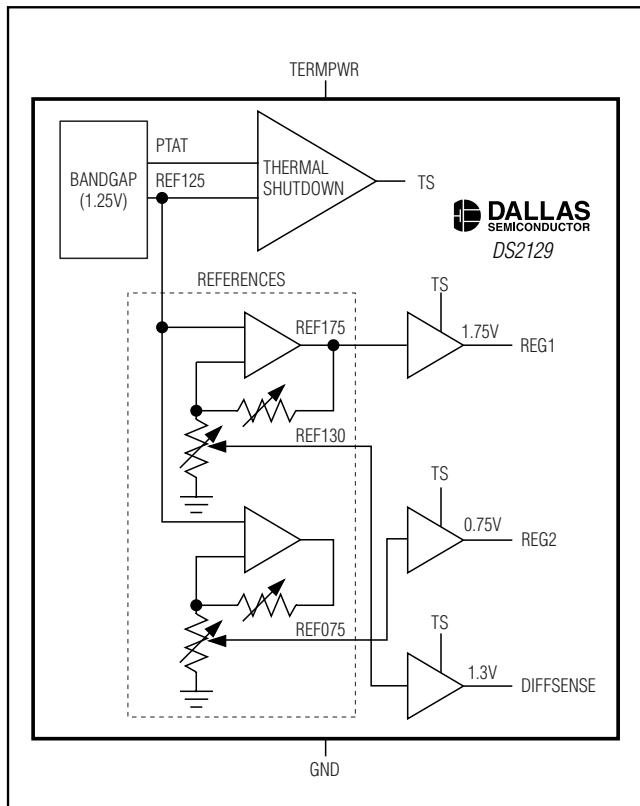

General Description

The DS2129 is a triple-output voltage regulator for 27-line, low-voltage-differential (LVD) SCSI termination for SPI-2 and SPI-3 applications using LVD termination networks. The device provides reference voltages and bias currents for LVD-termination resistor pi (π) networks. With a pi network (475 Ω , 121 Ω , 475 Ω), the DS2129 meets the common-mode bias, differential bias, and termination-impedance requirements of SPI-2 (Ultra2) and SPI-3 (Ultra3). The device also provides a 1.3V output for DIFFSENSE signaling, and includes protection features such as thermal shutdown and active current limiting.

Applications

- SCSI Array Backplane
- SCSI Cables

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Pin Description

PIN	NAME	FUNCTION
1, 8, 9, 10, 15, 16	N.C.	No Connection. Do not connect pins.
2	TERMPWR	Termination Power. Connect to SCSI TERMPWR line and decouple with a 4.7 μ F ceramic capacitor.
3	REG2	Regulator 2, 0.75V Output. Decouple with a 4.7 μ F ceramic capacitor.
4	GND	Signal Ground
5, 11–14	HS_GND	Heat-Sink Ground. Internally connected to the mounting pad. Should be connected to ground.
6	REG1	Regulator 1, 1.75V Output. Decouple with a 4.7 μ F ceramic capacitor.
7	DIFFSENSE	DIFFSENSE Output. Drives the SCSI bus DIFFSENSE line.

Detailed Description

The DS2129 provides three regulated outputs. The REG1 provides a 1.75V output, and the REG2 provides a 0.75V output. Both regulators can sink and source 200mA of current. These regulators are current-limited to less than 700mA. The thermal-shutdown circuit disables the output buffers should the die temperature exceed +150°C. With a pi network of resistors (475 Ω , 121 Ω , 475 Ω) connected to these two outputs, the DS2129 provides common-mode bias, differential bias, and common impedance and differential impedance, as required in a terminator specified in SPI-2 and SPI-3 standards for a SCSI system. The third regulator provides a 1.3V output for DIFFSENSE signaling.
