LS7083N
LS7084N

QUADRATURE CLOCK CONVERTER

June 2015

FEATURES:
- x1 and x4 mode selection
- Up to 16MHz output clock frequency
- Programmable output clock pulse width
- On-chip filtering of inputs for optical or magnetic encoder applications.
- TTL and CMOS compatible I/Os
- +3V to +12V operation (V_{DD} - V_{SS})
- **LS7083N**, **LS7084N** (DIP); **LS7083NS**, **LS7084NS** (SOIC) - See Figure 1

Applications:
- Interface incremental encoders to Up / Down Counters (See Figure 6A and Figure 6B)
- Interface rotary encoders to Digital Potentiometers (See Figure 7)

DESCRIPTION:
The **LS7083N** and **LS7084N** are CMOS quadrature clock converters. Quadrature clocks derived from optical or magnetic encoders, when applied to the A and B inputs of the **LS7083N** or **LS7084N**, are converted to strings of Up Clocks and Down Clocks (**LS7083N**) or to a Clock and an Up/Down direction control (**LS7084N**). These outputs can be interfaced directly with standard Up/Down counters for direction and position sensing of the encoder.

INPUT/OUTPUT DESCRIPTION:

RBIAS (Pin 1)
Input for external component connection. A resistor connected between this input and V_{SS} adjusts the output clock pulse width (Tow). For proper operation, the output clock pulse width must be less than or equal to the A, B pulse separation ($T_{OW} \leq T_{PS}$).

V_{DD} (Pin 2)
Supply Voltage positive terminal.

V_{SS} (Pin 3)
Supply Voltage negative terminal**.**

A (Pin 4)
Quadrature Clock Input A. This input has a filter circuit to validate input logic level and eliminate encoder dither.

B (Pin 5)
Quadrature Clock Input B. This input has a filter circuit identical to input A.

Mode (Pin 6)
Mode is a 3-state input to select resolutions x1, x2 or x4. The selected resolution multiplies the input quadrature clock rate by 1, 2 and 4, respectively, in producing the outputs UPCK / DNCK and CLK (see Figure 2).

The Mode input logic levels selects resolutions as follows:
Logic 0 = x1 Float = x2 Logic 1 = x4

PIN ASSIGNMENT - TOP VIEW

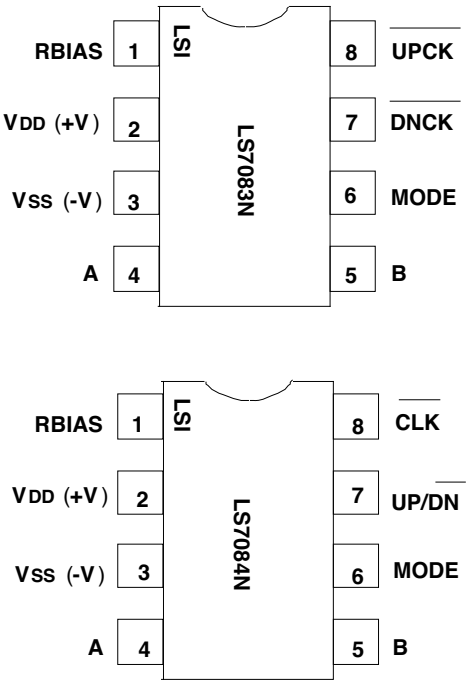

FIGURE 1

LS7083N - $\overline{\text{DNCK}}$ (Pin 7)
In **LS7083N**, this is the DOWN Clock Output. This output consists of low-going pulses generated when A input lags the B input.

LS7084N - UP/$\overline{\text{DN}}$ (Pin 7)
In **LS7084N**, this is the count direction indication output. When A input leads the B input, the UP/$\overline{\text{DN}}$ output goes high indicating that the count direction is UP. When A input lags the B input, UP/$\overline{\text{DN}}$ output goes low, indicating that the count direction is DOWN.

LS7083N - $\overline{\text{UPCK}}$ (Pin 8)
In **LS7083N**, this is the UP Clock output. This output consists of low-going pulses generated when A input leads the B input.

LS7084N - $\overline{\text{CLK}}$ (Pin 8)
In **LS7084N**, this is the combined UP Clock and DOWN Clock output. The count direction at any instant is indicated by the UP/$\overline{\text{DN}}$ output (Pin 7).

NOTE: For the **LS7084N**, the timing of $\overline{\text{CLK}}$ and UP/$\overline{\text{DN}}$ requires that the counter interfacing with **LS7084N** counts on the rising edge of the $\overline{\text{CLK}}$ pulses.
