

## MDCDE51-20-14-A

Ruland MDCDE51-20-14-A, 20mm x 14mm Double Disc Coupling, Aluminum, Clamp Style, Electrically Isolating, 50.8mm OD, 64.0mm Length

## Description

Ruland MDCDE51-20-14-A is an electrically isolating clamp double disc coupling with 20mm x 14mm bores, 50.8mm OD, and 64.0mm length. It is zero-backlash and has a balanced design for reduced vibration at high speeds. The double disc design is comprised of two anodized aluminum hubs, two sets of thin stainless steel disc springs, and an acetal center spacer allowing each disc to bend individually and accommodate all types of misalignment. The acetal center spacer isolates the two hubs preventing the incidental transfer of current from the motor to the driven component or vice versa. MDCDE51-20-14-A is lightweight and has low inertia making it well suited for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland manufactures MDCDE51-20-14-A to be torisionally rigid and an excellent fit for precise positioning stepper servo applications commonly found in semiconductor, solar, printing, machine tool, and test and measurement systems. It is machined from solid bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. MDCDE51-20-14-A is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

## **Product Specifications**
