Evaluation Board  
User's Guide**

---

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM  
CERTIFIED BY DNV  
— ISO/TS 16949 —**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*

**Object of Declaration: EVB-LAN88730 Evaluation Board**

**EU Declaration of Conformity**

Manufacturer: Microchip Technology Inc.  
2355 W. Chandler Blvd.  
Chandler, Arizona, 85224-6199  
USA

This declaration of conformity is issued by the manufacturer.

The development/evaluation tool is designed to be used for research and development in a laboratory environment. This development/evaluation tool is not intended to be a finished appliance, nor is it intended for incorporation into finished appliances that are made commercially available as single functional units to end users. This development/evaluation tool complies with EU EMC Directive 2004/108/EC and as supported by the European Commission's Guide for the EMC Directive 2004/108/EC (8<sup>th</sup> February 2010).

This development/evaluation tool complies with EU RoHS2 Directive 2011/65/EU.

This development/evaluation tool, when incorporating wireless and radio-telecom functionality, is in compliance with the essential requirement and other relevant provisions of the R&TTE Directive 1999/5/EC and the FCC rules as stated in the declaration of conformity provided in the module datasheet and the module product page available at [www.microchip.com](http://www.microchip.com).

For information regarding the exclusive, limited warranties applicable to Microchip products, please see Microchip's standard terms and conditions of sale, which are printed on our sales documentation and available at [www.microchip.com](http://www.microchip.com).

Signed for and on behalf of Microchip Technology Inc. at Chandler, Arizona, USA

## NOTES:

## Preface

### NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site ([www.microchip.com](http://www.microchip.com)) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXA”, where “XXXXX” is the document number and “A” is the revision level of the document.

## INTRODUCTION

This chapter contains general information that will be useful to know before using the EVB-LAN88730 Evaluation Board. Topics discussed in this chapter include:

- Document Layout
- Recommended Reading
- The Microchip Web Site
- Development Systems Customer Change Notification Service
- Customer Support

## DOCUMENT LAYOUT

This user's guide describes how to use the EVB-LAN88730 Evaluation Board. The document is organized as follows:

- [Chapter 1, Introduction](#) – This chapter provides an overview of the EVB-LAN88730 Evaluation Board and shows a simplified block diagram.
- [Chapter 2, Board Details](#) – This chapter describes the board details of the EVB-LAN88730 Evaluation Board including [Power](#), [Configuration](#) and [Mechanicals](#).
- [Appendix A, Evaluation Board](#) – This appendix shows the EVB-LAN88730 Evaluation Board.
- [Appendix B, Schematics](#) – This appendix shows the EVB-LAN88730 Evaluation Board schematics.
- [Appendix C, Bill of Materials](#) – This appendix includes the EVB-LAN88730 Evaluation Board Bill of Material (BOM).
- [Appendix D, Silk Screens](#) – This appendix includes the EVB-LAN88730 Evaluation Board silk screens.

# EVB-LAN88730 User's Guide

---

## RECOMMENDED READING

This user's guide describes how to use the EVB-LAN88730 Evaluation Board. Other useful documents are listed below.

- [1] LAN88730 Datasheet,  
Microchip. [www.microchip.com](http://www.microchip.com)
- [2] AN8-13 Suggested Magnetics  
Microchip. [www.microchip.com](http://www.microchip.com)

## THE MICROCHIP WEB SITE

Microchip provides online support via our web site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** - Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** - Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** - Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listing of Microchip sales offices, distributors and factory representatives

## DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at [www.microchip.com](http://www.microchip.com), click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- **Compilers** – The latest information on Microchip C compilers, assemblers, linkers and other language tools. These include all MPLAB C compilers; all MPLAB assemblers (including MPASM assembler); all MPLAB linkers (including MPLINK object linker); and all MPLAB librarians (including MPLIB object librarian).
- **Emulators** – The latest information on Microchip in-circuit emulators. This includes the MPLAB REAL ICE and MPLAB ICE 2000 in-circuit emulators.
- **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debuggers. This includes MPLAB ICD 3 in-circuit debuggers and PICkit 3 debug express.
- **MPLAB IDE** – The latest information on Microchip MPLAB IDE, the Windows Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB IDE Project Manager, MPLAB Editor and MPLAB SIM simulator, as well as general editing and debugging features.
- **Programmers** – The latest information on Microchip programmers. These include production programmers such as MPLAB REAL ICE in-circuit emulator, MPLAB ICD 3 in-circuit debugger and MPLAB PM3 device programmers. Also included are nonproduction development programmers such as PICSTART Plus and PICkit 2 and 3.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://support.microchip.com>.

## DOCUMENT REVISION HISTORY

### Revision A (February 2014)

- Replaces the previous SMSC version Rev. 1.0

### Revision B (November 2015)

- Added 'Declaration of Conformity'
- Added [Appendix A, Evaluation Board](#)
- Added [Appendix B, Schematics](#)
- Added [Appendix C, Bill of Materials](#)
- Added [Appendix D, Silk Screens](#)

# EVB-LAN88730 User's Guide

---

---

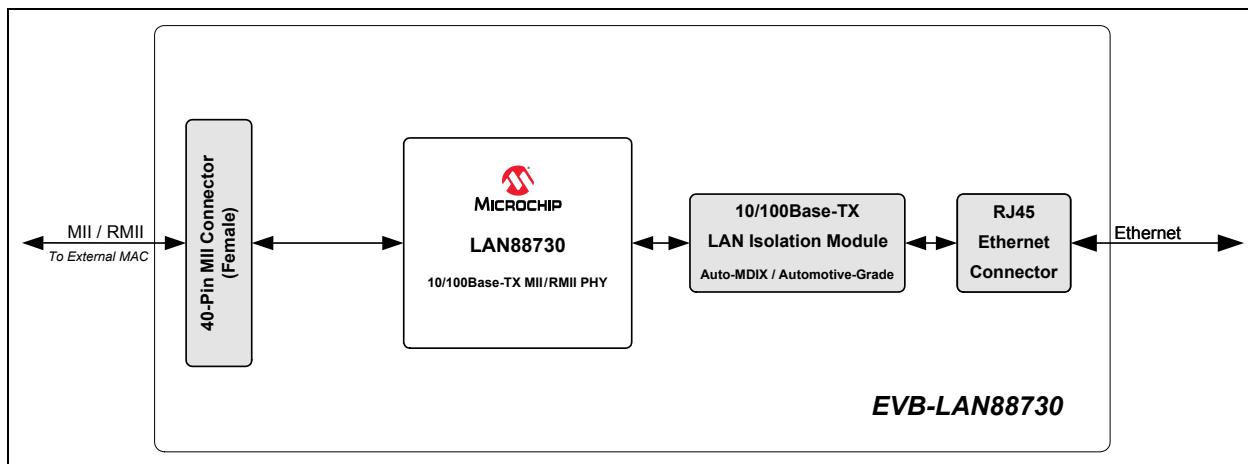

## NOTES:

## Chapter 1. Introduction

The LAN88730 is a low-power, small form factor, highly integrated analog interface IC for high-performance embedded automotive Ethernet applications. The LAN88730 requires only a single +3.3 V supply and provides an integrated +1.2 V supply to run the core digital logic.

The EVB-LAN88730 is a PHY Evaluation Board (EVB) that interfaces a Media Independent Interface (MII) or Reduced Media Independent Interface (RMII™) MAC controller to the LAN88730 Ethernet MII/RMII PHY via a 40-pin MII/RMII connector. The LAN88730 is connected to automotive grade Ethernet magnetics and an RJ45 Ethernet jack for 10/100 connectivity. A simplified block diagram of the EVB-LAN88730 can be seen in [Figure 1-1](#).

**FIGURE 1-1:** EVB-LAN88730 BLOCK DIAGRAM

# EVB-LAN88730 User's Guide

---

---

## NOTES:

## Chapter 2. Board Details

### 2.1 POWER

#### 2.1.1 +5 V Power

Power is normally supplied to the EVB-LAN88730's +3.3 V regulator externally via the +5 V power pins of the 40-pin connector. If desired, the EVB-LAN88730 can be powered without +5 V present on the 40-pin connector by supplying +5 V to the TP2 (red, see [Figure 2-1](#)) test point with ground connected to pin 20 of the J1 header.

**Note:** Before connecting an external power supply to TP2, ensure power is not present on the 40-pin connector's +5 V pins. Connecting +5 V simultaneously via the 40-pin connector and TP2 may result in permanent damage to the board.

#### 2.1.2 VDDIO Power

The LAN88730's VDDIO power may be supplied at a voltage other than +3.3 V by depopulating resistor R12 and supplying +1.6 V to +3.6 V externally via test point TP5 (purple, see [Figure 2-1](#)), with ground connected to pin 20 of the J1 header.

**Note:** Before connecting an external power supply to TP5, ensure that resistor R12 has been removed. Connecting an external power supply to TP5 while resistor R12 is populated may result in permanent damage to the board.

#### 2.1.3 +1.2 V Power

The LAN88730's internal +1.2 V regulator can be optionally disabled. Refer to [Section 2.2.5, "Internal +1.2 V Regulator Configuration \(REGOFF\)"](#) for additional information.

# EVB-LAN88730 User's Guide

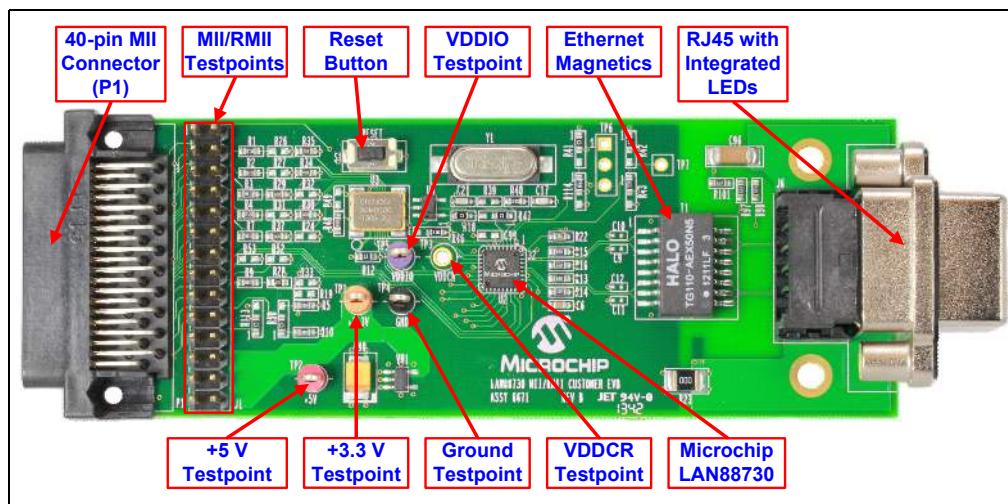

## 2.2 CONFIGURATION

The following sub-sections describe the various board features and configuration settings:

- MII/RMII Mode and Clocking Configuration (RMIISEL)
- PHY Address Configuration
- Mode Configuration
- nINT/TXER/TXD4 Pin Configuration (nINTSEL)
- Internal +1.2 V Regulator Configuration (REGOFF)
- LEDs
- Test Points
- System Connections
- Switches

A top view of the EVB-LAN88730 is shown in [Figure 2-1](#).

**FIGURE 2-1: TOP VIEW OF THE EVB88730**

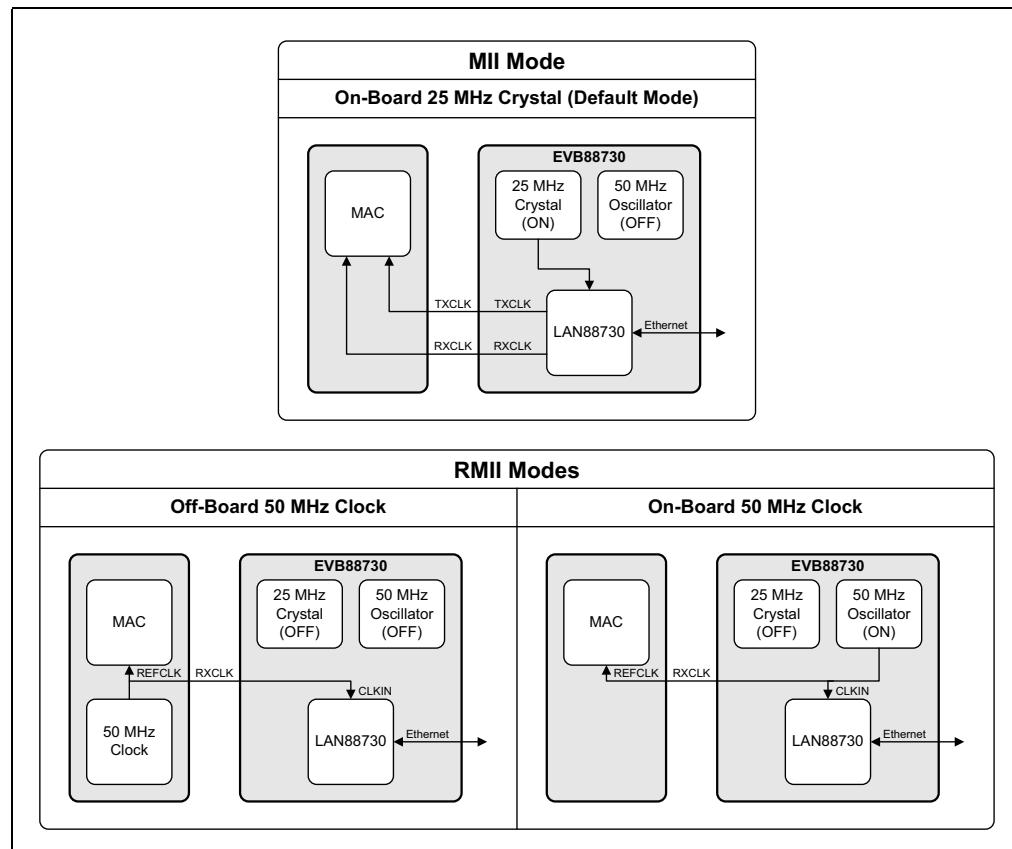

## 2.2.1 MII/RMII Mode and Clocking Configuration (RMIISEL)

The EVB-LAN88730 can operate in two functional modes: MII Mode or RMII Mode. The RMIISEL configuration strap is used to select one of these two modes. In MII Mode, the on-board 25 MHz crystal is used for clocking. In RMII Mode, the 50 MHz clock can be sourced by either the on-board 50 MHz oscillator or an off-board clock source.

Figure 2-2 summarizes the EVB-LAN88730 modes of operation. The EVB-LAN88730 must be properly configured for each mode as shown in Table 2-1. By default, the EVB-LAN88730 is configured to MII Mode. Refer to the LAN88730 Datasheet [1] for additional information on MII and RMII modes of operation.

**FIGURE 2-2: EVB-LAN88730 MODES OF OPERATION**

# EVB-LAN88730 User's Guide

---

**TABLE 2-1:** MII/RMII MODE RESISTOR CONFIGURATION

<b>RMII Mode</b> On-board 50 MHz Clock	Depopulate	Populate	Populate	Depopulate 1-2  Populate 2-3	Depopulate	Populate	Depopulate 1-2  Depopulate 2-3
<b>RMII Mode</b> Off-board 50 MHz Clock	Depopulate	Depopulate	Populate	Depopulate 1-2  Populate 2-3	Populate	Depopulate	Depopulate 1-2  Depopulate 2-3

## 2.2.2 PHY Address Configuration

The EVB-LAN88730 allows the user to configure the default PHY address at power-up via the PHYAD[2:0] configuration straps. [Table 2-2](#) details the proper configuration required for each PHY address value. By default, all EVB-LAN88730 PHY address straps are configured to a value of “0”.

**TABLE 2-2:** PHYAD[2:0] RESISTOR CONFIGURATION

### 2.2.3 Mode Configuration

The EVB-LAN88730 can be configured into a specific mode of operation at power-up via the MODE[2:0] configuration straps. [Table 2-3](#) details the proper configuration required for each mode. By default, all EVB-LAN88730 MODE[2:0] straps are configured to a value of “1”.

**Note:** For additional details on each mode of operation, refer to the LAN88730 Datasheet [1].

**TABLE 2-3: MODE[2:0] RESISTOR CONFIGURATION**

# EVB-LAN88730 User's Guide

## 2.2.4 nINT/TXER/TXD4 Pin Configuration (nINTSEL)

The nINT, TXER and TxD4 functions share a common LAN88730 pin. This pin can operate in two functional modes: nINT (Interrupt) Mode and TXER/TxD4 Mode. The nINTSEL configuration strap is used to select one of these two modes. The EVB-LAN88730 must be properly configured for each mode as detailed in [Table 2-4](#).

**TABLE 2-4:** nINT/TXER/TXD4 MODE RESISTOR CONFIGURATION

Mode	Mode Configuration Resistors		
	R42	R43	R113
nINT Mode (Default)	Populate 1-2  <i>Depopulate 2-3</i>	Populate 1-2  <i>Depopulate 2-3</i>	Populate 1-2  <i>Depopulate 2-3</i>
TXER/TxD4 Mode	<i>Depopulate 1-2</i>  Populate 2-3	<i>Depopulate 1-2</i>  Populate 2-3	<i>Depopulate 1-2</i>  Populate 2-3

**Note:** The nINTSEL configuration strap shares functionality with LED2. Therefore, LED2 may function active-high or active-low depending on the nINTSEL configuration. For additional information on the functionality of the nINT/TXER/TxD4 and LED2/nINTSEL pins, refer to the LAN88730 Datasheet [1] and EVB-LAN88730 [Schematics](#).

## 2.2.5 Internal +1.2 V Regulator Configuration (REGOFF)

The LAN88730 provides the ability to disable the internal +1.2 V regulator. When the regulator is disabled, an external +1.2 V must be supplied to the VDDCR pin (via TP3). Configuration of the internal regulator is controlled by the REGOFF configuration strap. The EVB-LAN88730 must be properly configured for each mode as follows:

### Internal +1.2 V Regulator Enabled (Default Mode)

- Populate the 1-2 positions of R114 and R41 to pull-down the REGOFF strap (enable regulator).
- Depopulate the 2-3 positions of R114 and R41.

### Internal +1.2 V Regulator Disabled

- Populate the 2-3 positions of R114 and R41 to pull-up the REGOFF strap (disable regulator).
- Depopulate the 1-2 positions of R114 and R41.

**Note:** The REGOFF configuration strap shares functionality with LED1. Therefore, LED1 may function active-high or active-low depending on the REGOFF configuration. For additional information on the LED1/REGOFF pin and the disabling of the internal 1.2 V regulator (power sequencing requirements, etc.), refer to the LAN88730 Datasheet [1] and EVB-LAN88730 [Schematics](#).

## 2.2.6 LEDs

**TABLE 2-5:** LEDS

Reference	Color	Indication
LED1	Green	Link/Activity Active when the PHY has established a valid link with a link partner and blinks when activity is detected.
LED2	Yellow	Speed Active when a 100BASE-TX link has been established. Inactive when a 10BASE-T link has been established or during line isolation.

**Note:** LED1 and LED2 are located inside the RJ45 connector. LED1 and LED2 may function active-high or active-low depending on the configuration of the REGOFF and nINTSEL straps, respectively. Refer to the LAN88730 Datasheet [1] and EVB-LAN88730 [Schematics](#) for additional information.

## 2.2.7 Test Points

**TABLE 2-6:** TEST POINTS

Test Point	Description	Connection
TP1	+3.3 V Test Point (Orange)	+3.3 V
TP2	+5.0 V Test Point (Red)	+5.0 V
TP3	+1.2 V VDDCR Test Point (Unpopulated) ( <a href="#">Note 1</a> )	+1.2 V
TP4	Ground Test Point (Black)	Ground
TP5	VDDIO Test Point (Purple)	+3.3 V ( <a href="#">Note 2</a> )

**Note 1:** VDDCR is the internal +1.2 V regulated output. When REGOFF is enabled, the internal 1.2 V regulator is disabled. In this case, an external 1.2 V regulator must be supplied to test point TP3.

**Note 2:** The LAN88730's VDDIO power may be supplied externally at a voltage other than +3.3 V as described in [Section 2.1, "Power"](#).

## 2.2.8 System Connections

**TABLE 2-7:** SYSTEM CONNECTIONS

PLUG/HEADER	DESCRIPTION	PART
J1	2x14 MII Header <b>Note:</b> Refer to <a href="#">Table 2-8</a> for a full pin list.	Adam Tech PH2-28-U-A
J6	RJ45 with Integrated LEDs	Amphenol MRJ-5381-01
P1	40-pin Female MII Connector <b>Note:</b> Refer to <a href="#">Table 2-9</a> for a full pin list.	Tyco 5173278-2

# EVB-LAN88730 User's Guide

---

**TABLE 2-8: J1 - 2x14 MII HEADER PINOUT**

Header Pin	Description	Header Pin	Description
1	NRST	15	TXD1
2	MDIO ( <a href="#">Note 3</a> )	16	TXD2
3	MDC	17	TXD3
4	RXD3/ <u>PHYAD2</u>	18	CRS_DV/COL/ <u>MODE2</u>
5	RXD2/ <u>RMIISEL</u>	19	CRS/RXDV ( <a href="#">Note 6</a> )
6	RXD1/ <u>MODE1</u>	20	Ground
7	RXD0/ <u>MODE0</u>	21	nINT ( <a href="#">Note 5</a> )
8	RXDV	22	VDDIO
9	RXCLK ( <a href="#">Note 4</a> )	23	+3.3 V
10	RXER/RXD4/ <u>PHYAD0</u>	24	Ground
11	TXER/TXD4 ( <a href="#">Note 5</a> )	25	Ground
12	TXCLK	26	Ground
13	TXEN	27	Ground
14	TXD0	28	Ground

**Note 3:** Resistor R11 acts as a pull-up on the MDIO pin. In most situations, the MAC circuitry provides this pull-up and R11 is not required.

**Note 4:** In MII Mode, this pin connects to the RXCLK/PHYAD1 pin of the LAN88730. In RMII Mode, this pin is used to route the 50 MHz clock source between the EVB-LAN88730 and the connected MAC. Refer to [Section 2.2.1, "MII/RMII Mode and Clocking Configuration \(RMIISEL\)"](#) and the EVB-LAN88730 [Schematics](#) for additional information.

**Note 5:** The nINT/TXER/TXD4 configuration determines the functionality of this pin. When in nINT (Interrupt) Mode, pin 21 of J1 is connected to pin 18 (nINT) of the LAN88730 and pin 11 of J1 is not connected. When in TXER/TXD4 Mode, pin 11 of J1 is connected to pin 18 (TXER/TXD4) of the LAN88730 and pin 21 of J1 is not connected. Refer to [Section 2.2.4, "nINT/TXER/TXD4 Pin Configuration \(nINT-SEL\)"](#) for additional information.

**Note 6:** The configuration of the R50 resistor determines the functionality of this pin. In MII Mode, this pin connects to the CRS pin of the LAN88730. In RMII Mode, this pin is not connected. Refer to [Section 2.2.1, "MII/RMII Mode and Clocking Configuration \(RMIISEL\)"](#) and the EVB-LAN88730 [Schematics](#) for additional information.

**TABLE 2-9: P1 - 40-PIN FEMALE CONNECTOR PINOUT**

Pin	Description	Pin	Description	Pin	Description	Pin	Description
1	+5 V	11	TXER ( <a href="#">Note 7</a> )	21	+5 V	31	GND
2	MDIO ( <a href="#">Note 3</a> )	12	TXCLK	22	GND	32	GND
3	MDC	13	TXEN	23	GND	33	GND

7	RXD0	17	TXD3	27	GND	37	GND
8	RXDV	18	COL	28	GND	38	GND
9	RXCLK ( <a href="#">Note 4</a> )	19	CRS ( <a href="#">Note 6</a> )	29	GND	39	GND
10	RXER	20	+5 V	30	GND	40	+5 V

**Note 7:** The nINT/TXER/TXD4 configuration determines the functionality of this pin. When in nINT (Interrupt) Mode, this pin is not connected. When in TXER/TXD4 Mode, this pin is connected to pin 18 (TXER/TXD4) of the LAN88730. Refer to [Section 2.2.4, “nINT/TXER/TXD4 Pin Configuration \(nINTSEL\)”](#) for additional information.

## 2.2.9 Switches

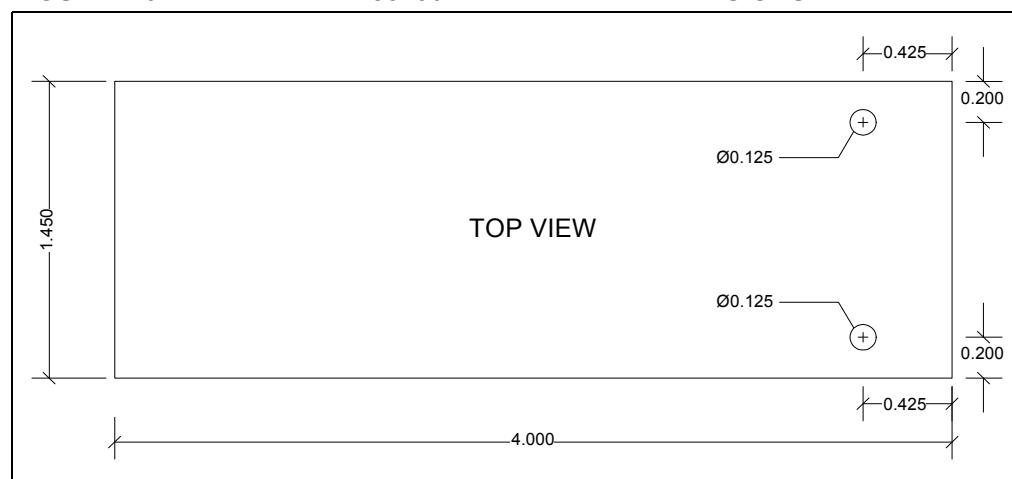

**TABLE 2-10: SWITCHES**

Switch	Description	Function
S1	Reset switch	When pressed, triggers a board reset.

## 2.3 MECHANICALS

[Figure 2-3](#) details the EVB-LAN88730 mechanical dimensions [inch].
