SBAS271 − MARCH 2004

16-Bit, Quad Voltage Output Digital-to-Analog Converter

FEATURES

- **Low Glitch: 1nV-s (typ)**
- **Low Power: 18mW**
- **Unipolar or Bipolar Operation**
- **Settling Time: 12μs to 0.003%**
- **16-Bit Linearity and Monotonicity: –40°C to +85°C**
- **Programmable Reset to Mid-Scale or Zero-Scale**
- **Data Readback**
- **Double-Buffered Data Inputs**
- **Internal Bandgap Voltage Reference**
- **Power-On Reset**
- **3V to 5V Logic Interface**

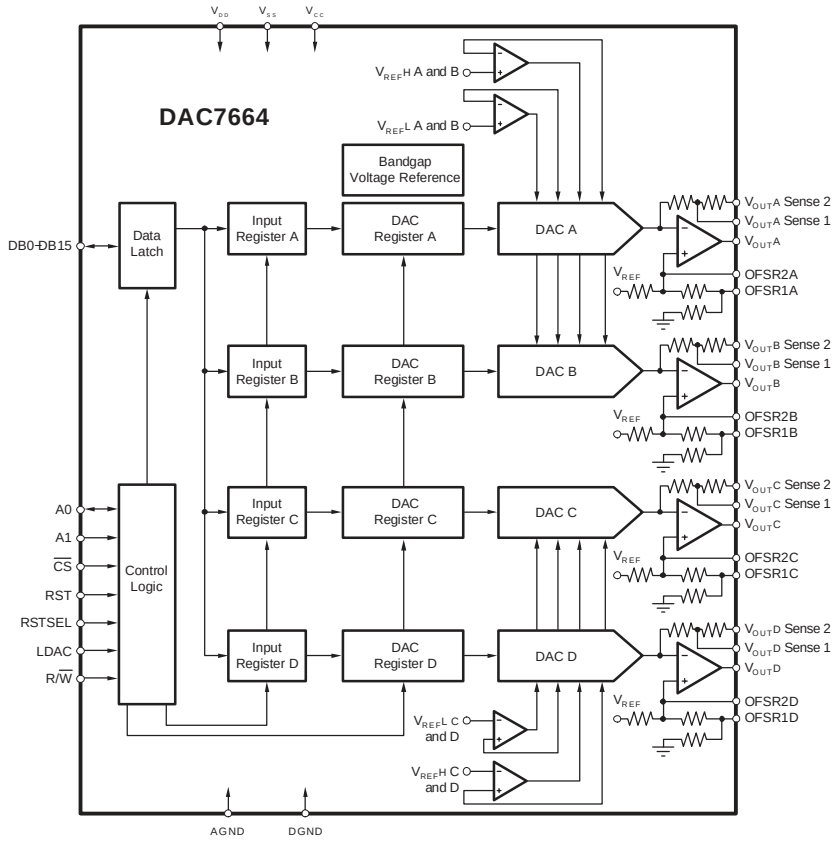
APPLICATIONS

- **Process Control**
- **Closed-Loop Servo Control**
- **Motor Control**
- **Data Acquisition Systems**
- **DAC-per-Pin Programmers**

DESCRIPTION

The DAC7664 is a 16-bit, quad voltage output digital-to-analog converter (DAC) with 16-bit monotonic performance over the specified temperature range. It accepts 16-bit parallel input data, has double-buffered DAC input logic (allowing simultaneous update of all DACs), and provides a readback mode of the internal input registers. Programmable asynchronous reset clears all registers to a mid-scale code of 8000h or to a zero-scale of 0000h. The DAC7664 can operate from a single +5V supply or from +5V and −5V supplies.

Low power and small size per DAC make the DAC7664 ideal for automatic test equipment, DAC-per-pin programmers, data acquisition systems, and closed-loop servo control. The DAC7664 is available in an LQFP-64 package and is specified for operation over the −40°C to +85°C temperature range.



This device has ESD-CDM sensitivity and special handling precautions must be taken.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range unless otherwise noted(1)

	DAC7664	UNIT
IOV_{DD}, V_{CC} and V_{DD} to V_{SS}	−0.3 to 11	V
IOV_{DD}, V_{CC} and V_{DD} to GND	−0.3 to 5.5	V
Digital Input Voltage to GND	−0.3 to V_{DD} + 0.3	V
Digital Output Voltage to GND	−0.3 to V_{DD} + 0.3	V
ESD-CDM	200	V
Maximum Junction Temperature	+150	°C
Operating Temperature Range	−40 to +85	°C
Storage Temperature Range	−65 to +125	°C
Lead Temperature (soldering, 10s)	+300	°C

(1) Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum conditions for extended periods may degrade device reliability. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those specified is not implied.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ELECTRICAL CHARACTERISTICS: V_{SS} = 0V

All specifications at $T_A = T_{MIN}$ to T_{MAX}, $IOV_{DD} = V_{DD} = V_{CC}$ = +5V, and V_{SS} = 0V, unless otherwise noted.

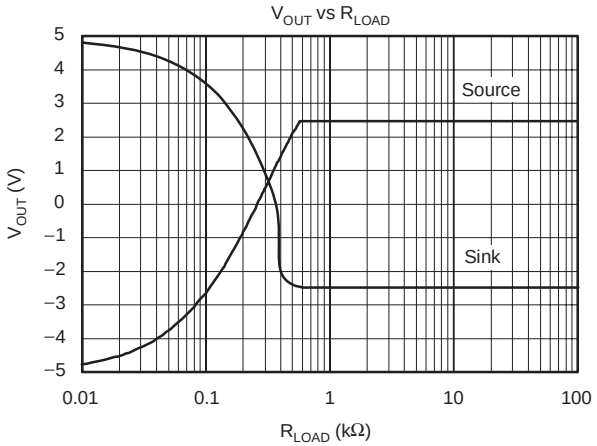

Figure 52

THEORY OF OPERATION

The DAC7664 is a quad voltage output 16-bit DAC. The architecture is an R−2R ladder configuration with the three most significant bits (MSBs) segmented, followed by an operational amplifier that serves as a buffer. Each DAC has its own R−2R ladder network, segmented MSBs, and output op amp, as shown in Figure 53. The minimum voltage output (zero-scale) and maximum voltage output (full-scale) are set by the internal voltage references and the resistors associated with the output operational amplifier.

The digital input is a 16-bit parallel word and the DAC input registers offer readback capability. The converters can be powered from either a single +5V supply or a dual ±5V supply. The device offers a reset function that immediately sets all DAC output voltages and DAC registers to mid-scale (code 8000h) or to zero-scale, code 0000h. See Figure 54 and Figure 55 for the basic operation of the DAC7664.

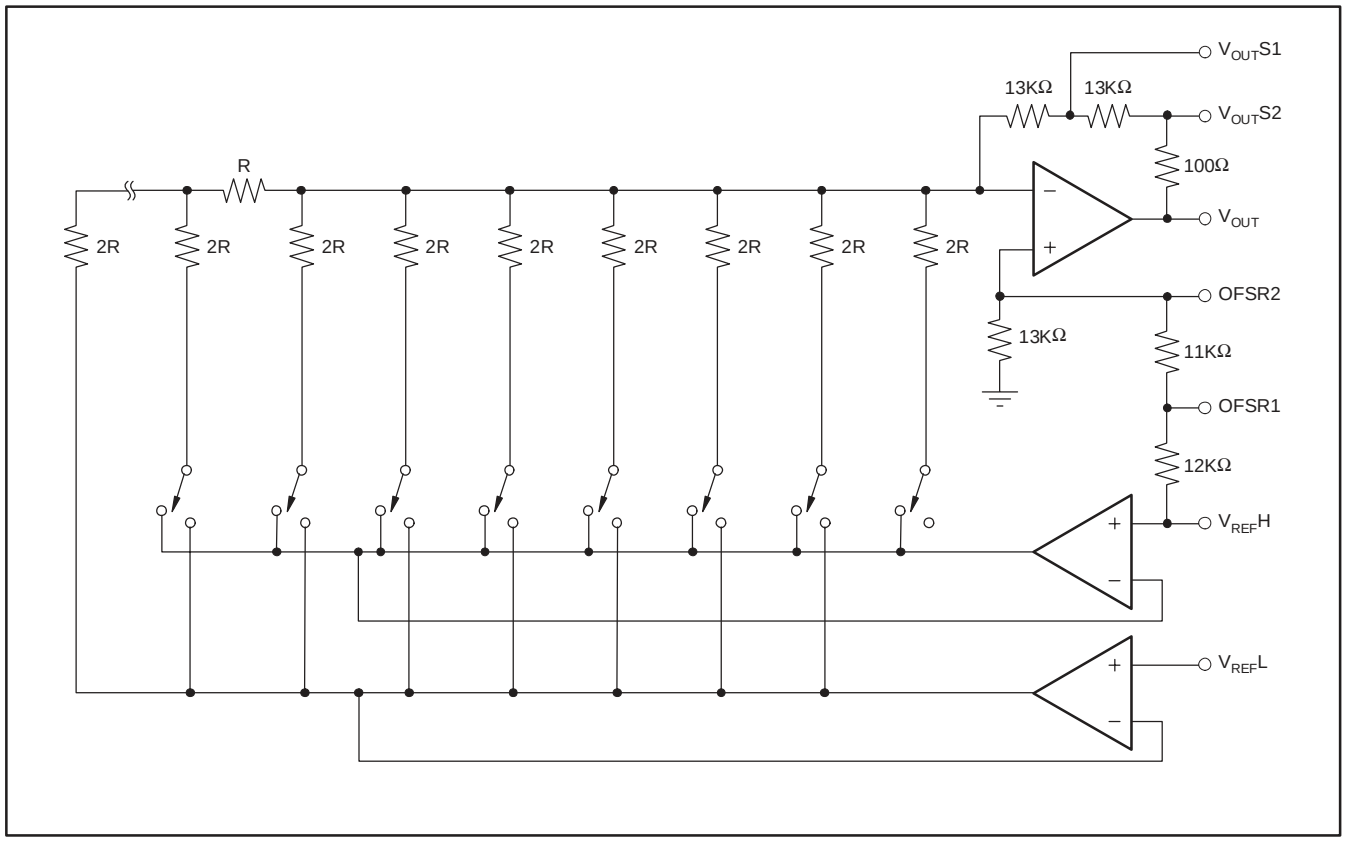

Figure 53. DAC7664 Architecture

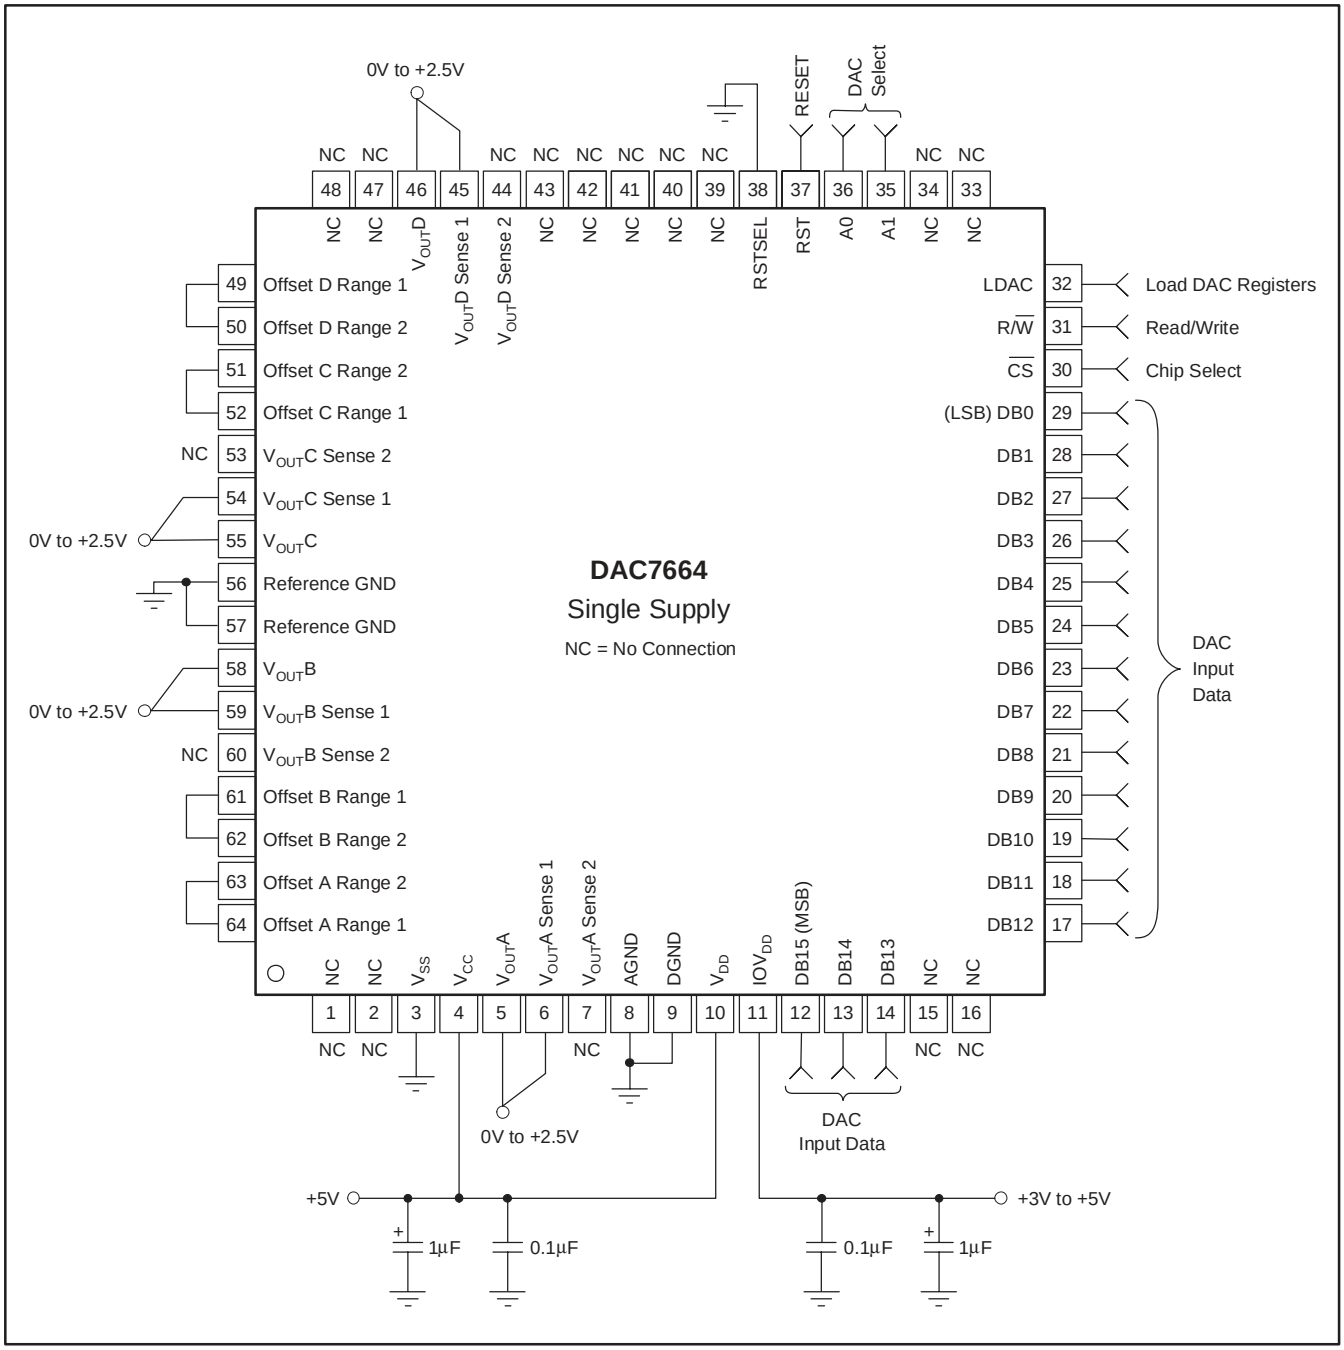

Figure 54. Basic Single-Supply Operation of the DAC7664

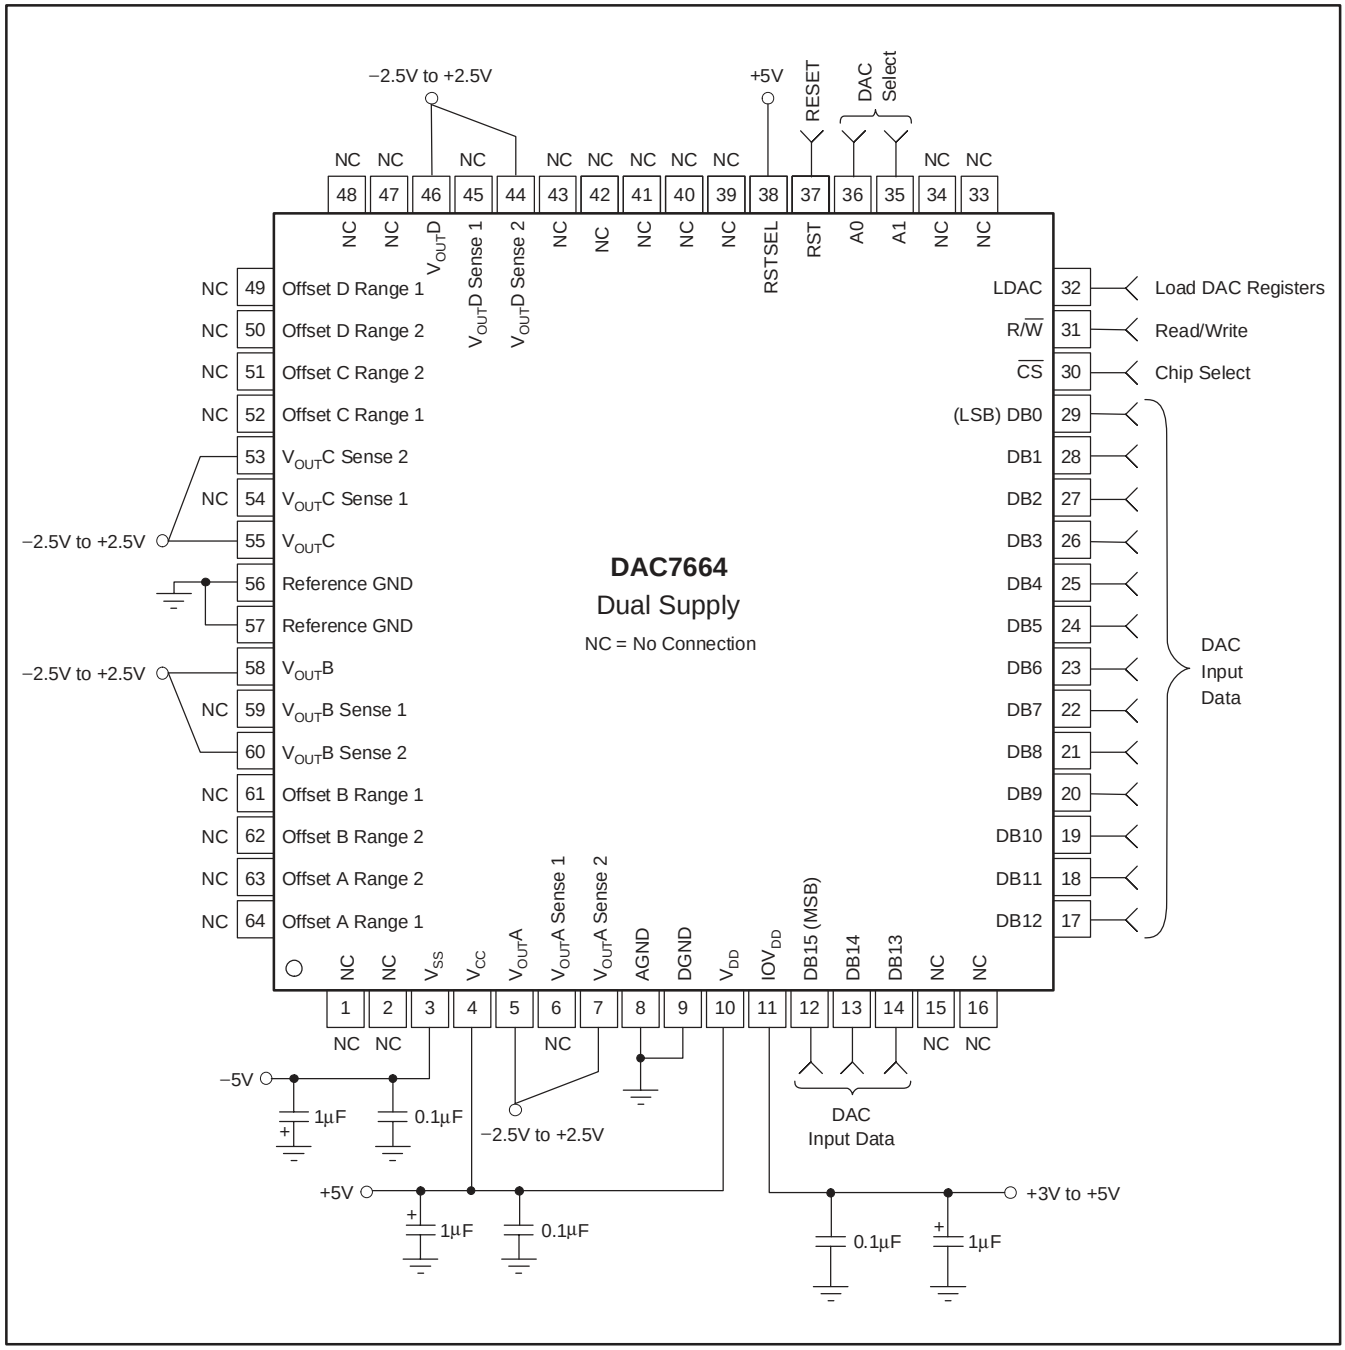

Figure 55. Basic Dual-Supply Operation of the DAC7664

ANALOG OUTPUTS

When V_{SS} = –5V (dual-supply operation), the output amplifier can swing to within 2.25V of the supply rails over a range of –40°C to +85°C. When V_{SS} = 0V (single-supply operation), and with R_{LOAD} also connected to ground, the output can swing to within 5mV of ground. Care must be taken when measuring the zero-scale error when V_{SS} = 0V. Since the output voltage cannot swing below ground, the output voltage may not change for the first few digital input codes (0000h, 0001h, 0002h, etc.) if the output amplifier has a negative offset.

Due to the high accuracy of these DACs, system design problems such as grounding and contact resistance are very important. A 16-bit converter with a 2.5V full-scale range has a 1LSB value of 38µV. With a load current of 1mA, series wiring and connector resistance of only 40mΩ (R_{W2}) will cause a voltage drop of 40µV, as shown in Figure 56. To understand what this means in terms of system layout, the resistivity of a typical 1-ounce copper-clad printed circuit board is 1/2 mΩ per square. For a 1mA load, a 0.01-inch-wide printed circuit conductor 0.6 inches long will result in a voltage drop of 30µV.

The DAC7664 offers a force and sense output configuration for the high open-loop gain output amplifier. This feature allows the loop around the output amplifier to be closed at the load (as shown in Figure 56), thus ensuring an accurate output voltage.

DIGITAL INTERFACE

Table 1 shows the basic control logic for the DAC7664. Note that each internal register is edge-triggered and not level-triggered. When the LDAC signal is transitioned to high, the digital word currently in the register is latched. The first set of registers (the input registers) are triggered via the A0, A1, R/$\overline{W}$, and $\overline{CS}$ inputs. Only one of these registers is transparent at any given time.

The double-buffered architecture is designed mainly so each DAC input register can be written to at any time and then all DAC voltages updated simultaneously by the rising edge of LDAC. It also allows a DAC input register to be written to at any point and the DAC voltages to be synchronously changed via a trigger signal connected to LDAC.

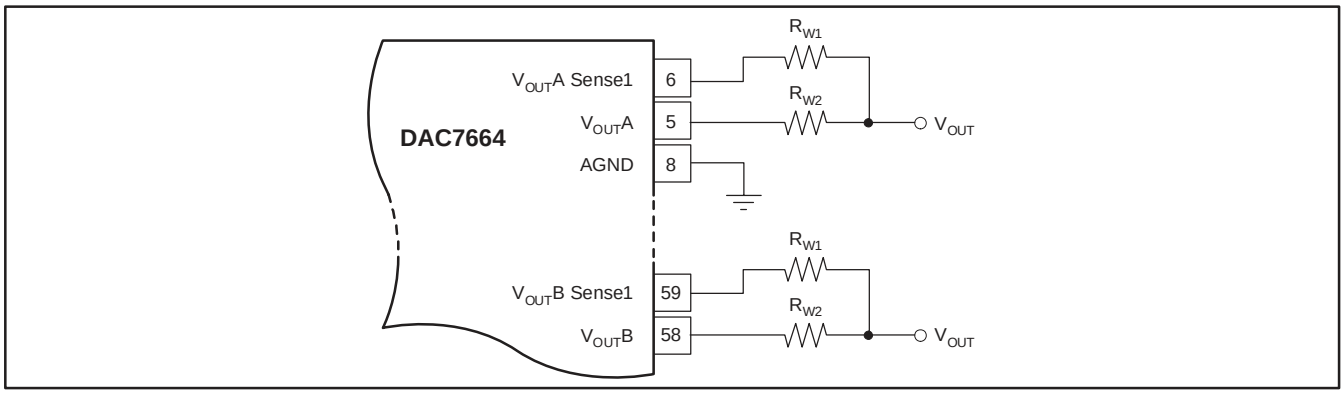

Figure 56. Analog Output Closed-Loop Configuration (1/2 DAC7664). R_W represents wiring resistances.

Table 1. DAC7664 Logic Truth Table

X	X	X	X	↑	H	X	Reset to mid-scale	Reset to mid-scale	Reset to mid-scale	All

3V TO 5V LOGIC INTERFACE

All of the digital input and output pins are compatible with any logic supply voltage between 3V and 5V. Connect the interface logic supply voltage to the IOV_{DD} pin. Note that the internal digital logic operates from 5V, so the VDD pin must connect to a 5V supply.

GLITCH SUPPRESSION CIRCUIT

Figure 21, Figure 22, Figure 48, and Figure 49 show the typical DAC output when switching between codes 7FFFh and 8000h. For R-2R ladder DACs, this is potentially the worst-case glitch condition, since every switch in the DAC changes state. To minimize the glitch energy at this and other code pairs with possible high-glitch outputs, an internal track-and-hold circuit is used to maintain the DAC ouput voltage at a nearly constant level during the internal switching interval. This track-and-hold circuit is activated only when the transition is at, or close to, one of the code pairs with the high-glitch possibility.

It is advisable to avoid digital transitions within 1µs of the rising edge of the LDAC signal. These signals can affect the charge on the track-and-hold capacitor, thus increasing the glitch energy.

DIGITAL TIMING

Figure 57 and Table 2 provide detailed timing information for the digital interface of the DAC7664.

DIGITAL INPUT CODING

The DAC7664 input data is in straight binary format. The output voltage for single-supply operation is given by Equation 1:

$$V_{OUT} = \frac{2.5 \times N}{65,536} \quad (1)$$

where N is the digital input code.

This equation does not include the effects of offset (zero-scale) or gain (full-scale) errors.

The output for the dual supply operation is given by Equation 2:

$$V_{OUT} = \frac{5 \times N}{65,536} - 2.5 \quad (2)$$

t_{LH}	$\overline{CS}$ low after LDAC high	100			ns
t_{LX}	LDAC high	100			ns
t_{DS}	Data valid to $\overline{CS}$ low	0			ns
t_{DH}	Data valid after $\overline{CS}$ low	10			ns
t_{LWD}	LDAC low	100			ns
t_{SS}	RSTSEL valid before RST high	0			ns
t_{SH}	RSTSEL valid after RST high	200			ns
t_{RSS}	RSTSEL low before RST high	10			ns
t_{RSH}	RSTSEL low after RST high	10			ns
t_{S}	Settling time		12		µs

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
DAC7664YBT	ACTIVE	LQFP	PM	64	250	RoHS & Green	NIPDAU-DCC	Level-3-260C-168 HR	-40 to 85	DAC7664Y B	Samples
DAC7664YCT	ACTIVE	LQFP	PM	64	250	RoHS & Green	NIPDAU-DCC	Level-3-260C-168 HR	-40 to 85	DAC7664Y C	Samples
DAC7664YT	ACTIVE	LQFP	PM	64	250	RoHS & Green	NIPDAU-DCC	Level-3-260C-168 HR	-40 to 85	DAC7664Y	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

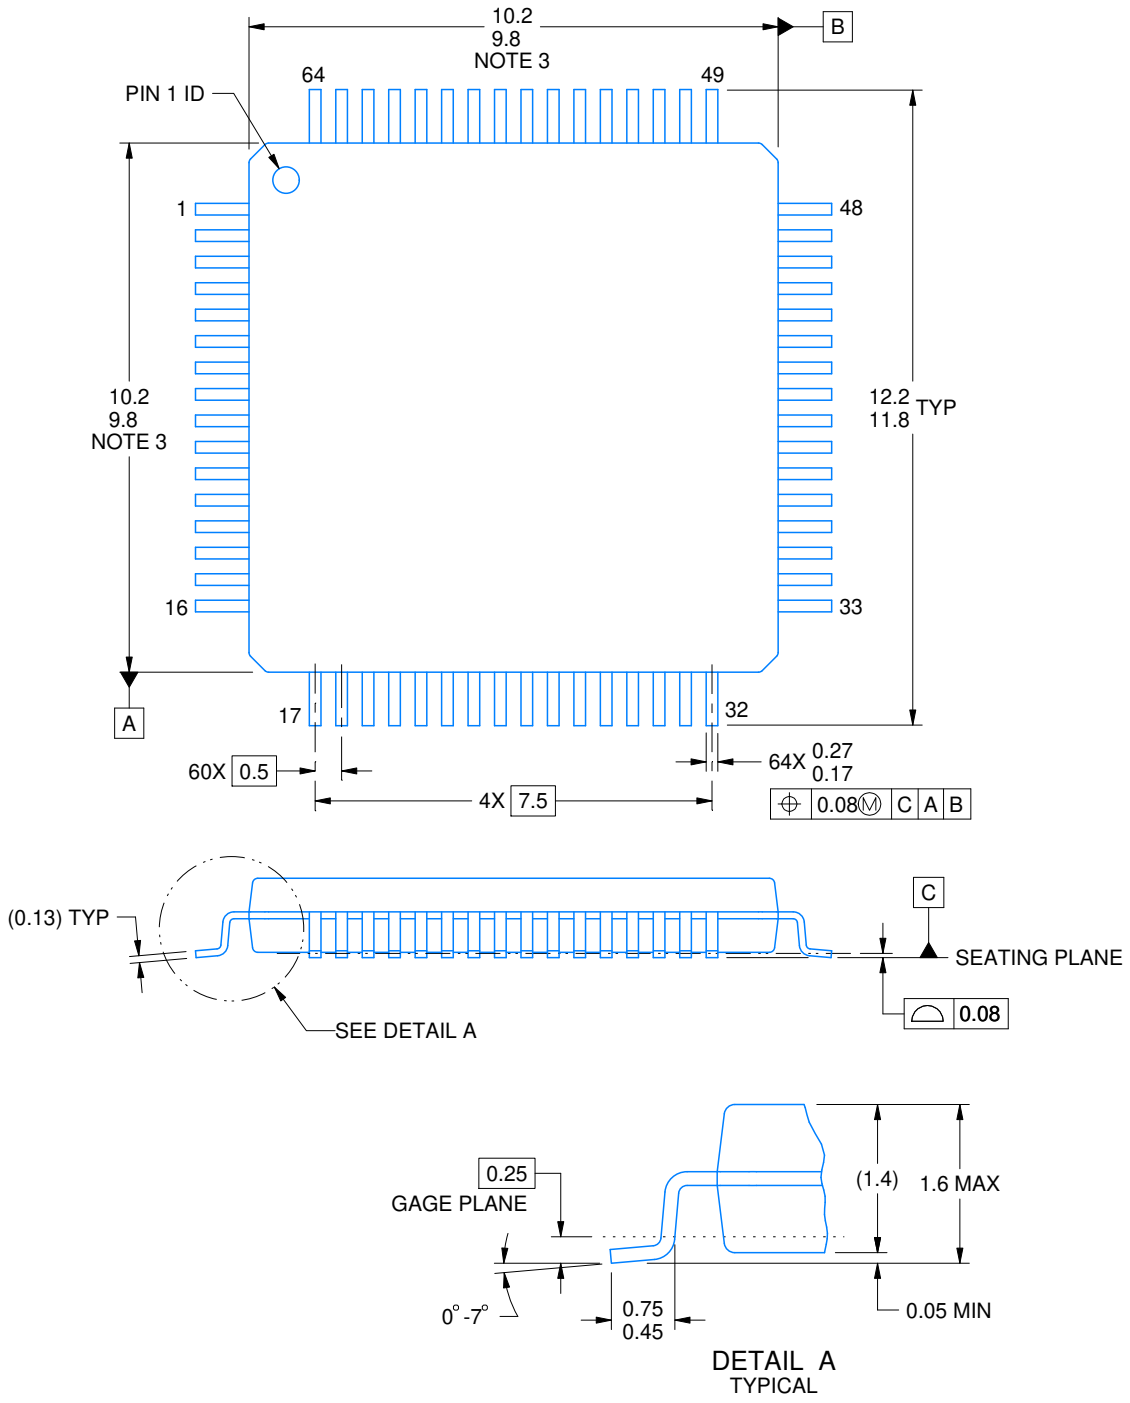
In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE OUTLINE

PM0064A

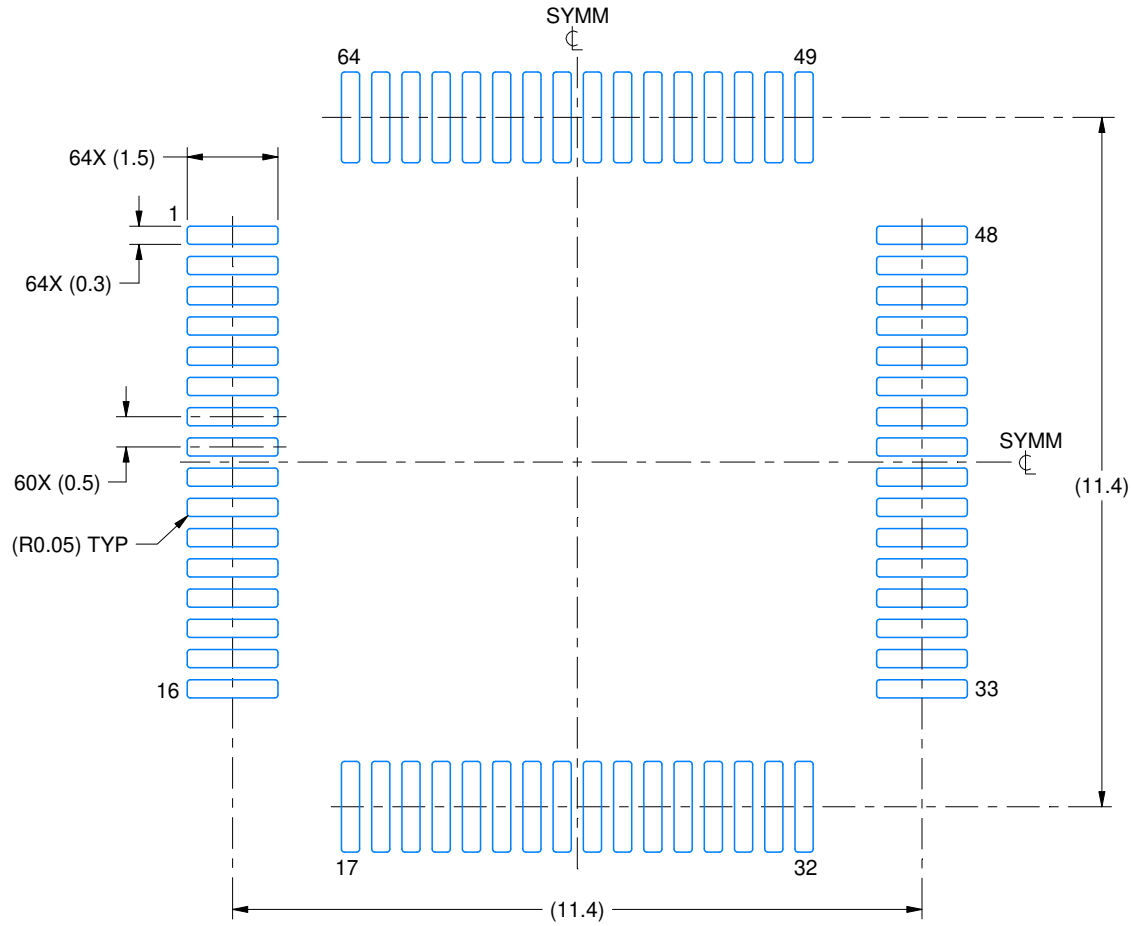
LQFP - 1.6 mm max height

PLASTIC QUAD FLATPACK

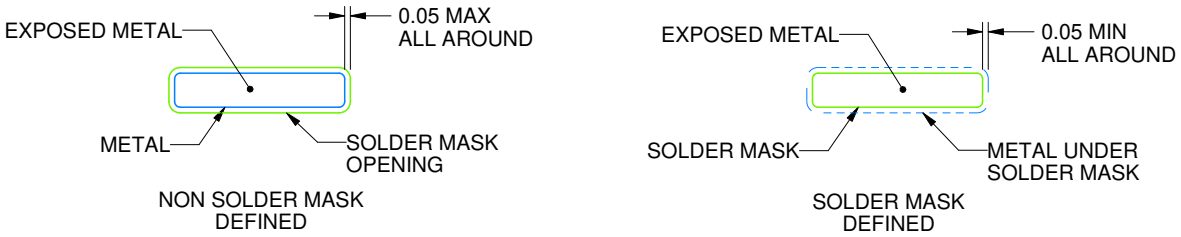


NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MS-026.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:8X

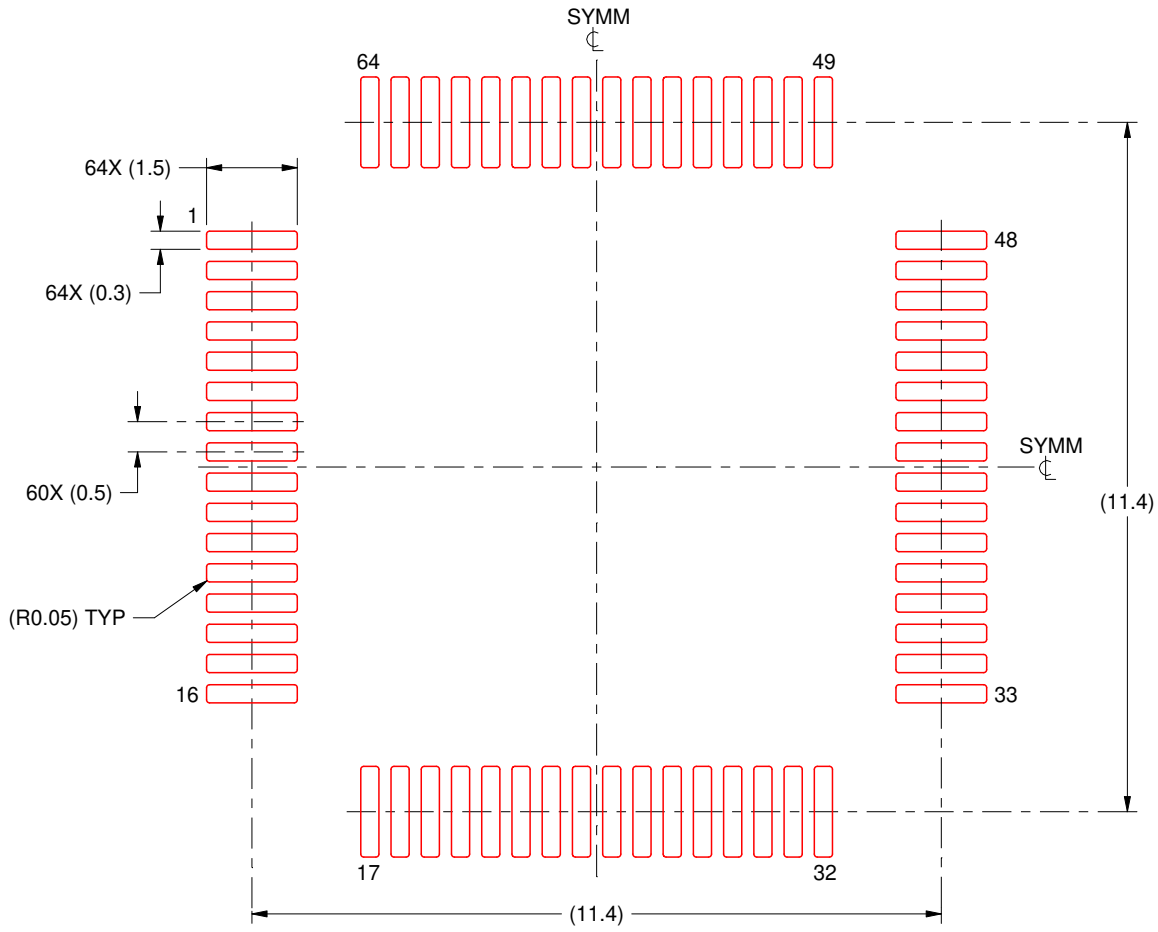


SOLDER MASK DETAILS

4215162/A 03/2017

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
7. For more information, see Texas Instruments literature number SLMA004 (www.ti.com/lit/slma004).



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:8X

4215162/A 03/2017

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
