

NCP432FCT2GEVB: Controlled 1.5 A Load Switch, without Auto-Discharge Path, Evaluation Board

Evaluation/Development Tool Description

The NCP432FCT2GEVB evaluation board is designed to quickly test the NCP432, a low Ron MOSFET controlled by an external logic pin, allowing optimization of battery life, and portable device autonomy.

Evaluation/Development Tool Information

| Product | Status | Compliance | Short Description | Parts Used | Action |
|----------------|----------|------------|-----------------------------------------------------------------------------|-------------|----------------------------------------------|
| NCP432FCT2GEVB | Lifetime | Pb-free | Controlled 1.5 A Load Switch, without Auto-Discharge Path, Evaluation Board | NCP432FCT2G | » Contact Local Sales Office |
