THB Grade IIIB Class X1 Interference Suppression Film Capacitor Radial MKP 480 V_{AC} - Three Phase Across the Line

FEATURES

- IEC 60384-14: 2013 / AMD1: 2016 grade IIIB: 85 °C, 85 % RH, 1000 h at U_{RAC} certified
- AEC-Q200 qualified
- Maximum permissible AC voltage up to 530 V
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

AUTOMOTIVE GRADE

MOUNTING

Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.

Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that the stand-off pips are in good contact with the printed-circuit board.

- For pitches ≥ 27.5 mm the capacitors shall be mechanically fixed by the leads and the body clamped

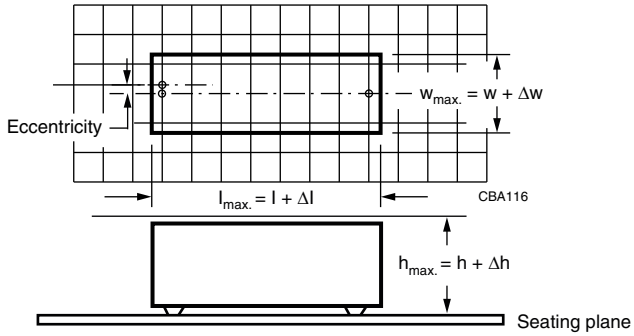
Space Requirements for Printed-Circuit Board Applications and Dimension Tolerances

For the maximum product dimensions and maximum space requirements for length ($l_{max.}$), width ($w_{max.}$), and height ($h_{max.}$) following tolerances must be taken in account in the envelopment of the components as shown in the drawings below.

$l_{max.} = l + \Delta l$, $w_{max.} = w + \Delta w$, and $h_{max.} = h + \Delta h$

- For products with pitch = 27.5 mm, $\Delta w = \Delta l = \Delta h = 0.7$ mm
- For products with pitch = 37.5 mm, $\Delta w = \Delta l = \Delta h = 0.7$ mm
- For products with pitch = 52.5 mm, $\Delta w = \Delta l = \Delta h = 1.0$ mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.



For the minimum product dimensions for length ($l_{min.}$), width ($w_{min.}$), and height ($h_{min.}$) following tolerances of the components are valid:

$l_{min.} = l - \Delta l$, $w_{min.} = w - \Delta w$, and $h_{min.} = h - \Delta h$

- For products with pitch = 27.5 mm, $\Delta w = \Delta l = \Delta h = 1.0$ mm
- For products with pitch = 37.5 mm, $\Delta w = \Delta l = \Delta h = 1.0$ mm
- For products with pitch = 52.5 mm, $\Delta w = \Delta l = \Delta h = 1.5$ mm

SOLDERING CONDITIONS

For general soldering conditions and wave soldering profile we refer to the document “Soldering Guidelines for Film Capacitors”: www.vishay.com/doc?28171

STORAGE TEMPERATURE

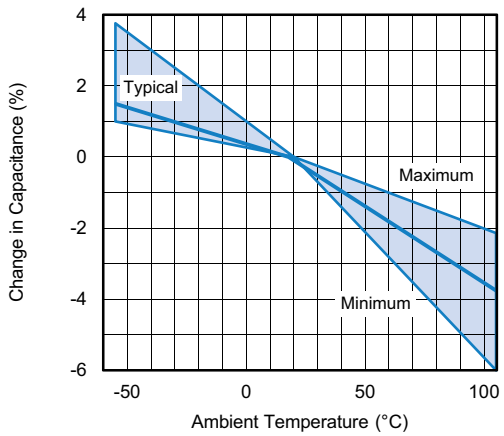
T_{stg} = -25 °C to +35 °C with RH maximum 75 % without condensation.

RATINGS AND CHARACTERISTICS REFERENCE CONDITIONS

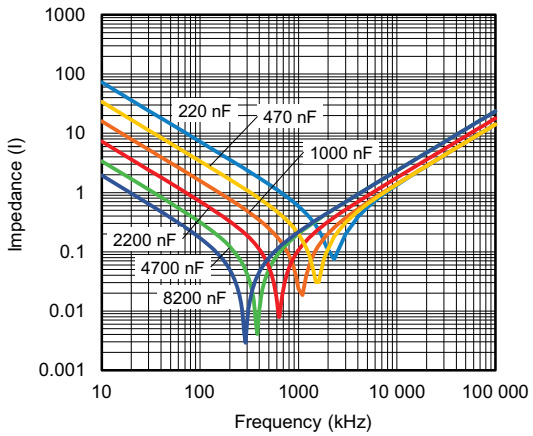
Unless otherwise specified. all electrical values apply to an ambient temperature of 23 °C ± 1°C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of 50 % ± 2 %.

For reference testing. a conditioning period shall be applied over 96 hours ± 4 hours by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

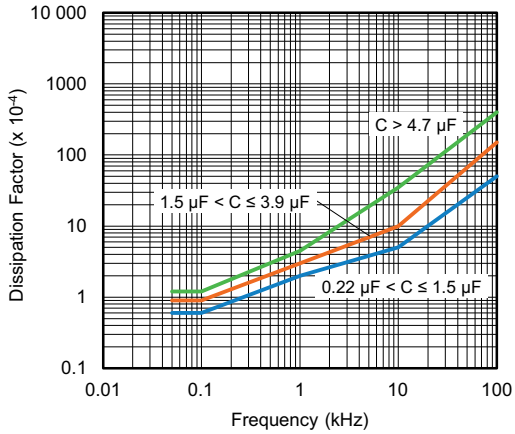
CHARACTERISTICS



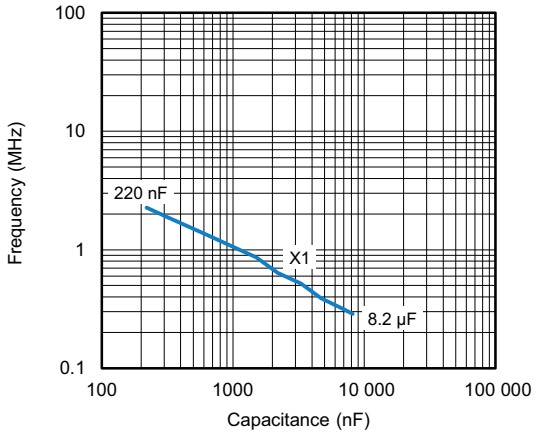
Capacitance as a function of ambient temperature (typical curve)



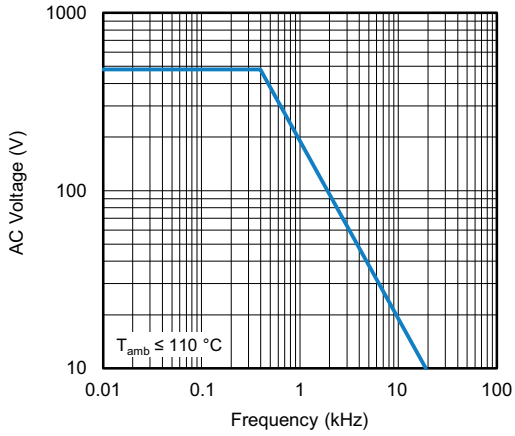
Impedance as a function of frequency (typical curve)



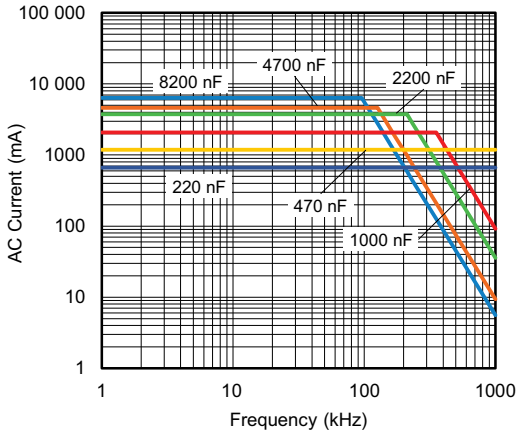
Tangent of loss angle as a function of frequency (typical curve)



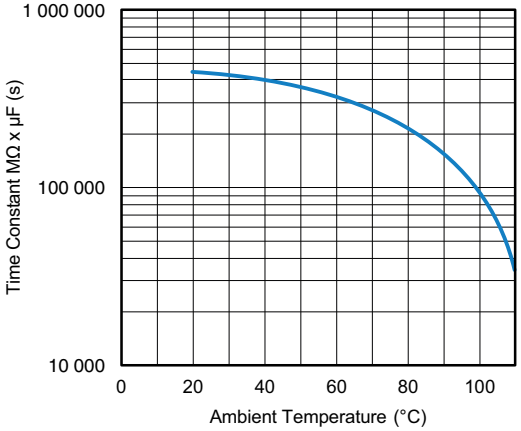
Resonant frequency as a function of capacitance (typical curve)



Max. RMS voltage as a function of frequency



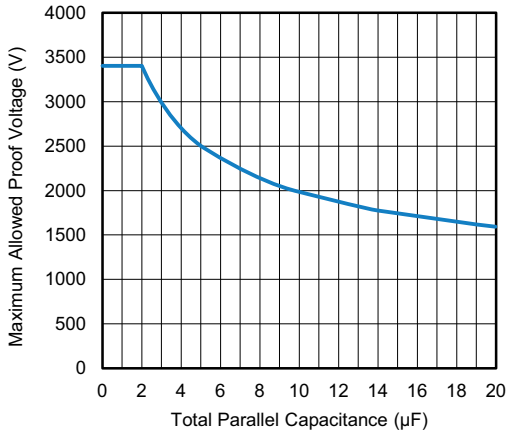
Max. RMS current as a function of frequency



Insulation resistance as a function of ambient temperature
(typical curve)

APPLICATION NOTES

- For X1 electromagnetic interference suppression in standard across the line applications (50 Hz / 60 Hz) with a maximum of 480 V_{AC} rated voltage including fluctuation of the mains. It is recommended to use these components in a mains with maximum nominal voltage of 400 V_{AC}. Higher continuous applied voltages will shorten the life time
- For series impedance applications we refer to application note www.vishay.com/doc?28153
- To ensure withstanding high humidity requirements in the application the epoxy adhesion at the leads shall not be damaged. Therefore the leads may not be damaged or not be bent before soldering
- For capacitors connected in parallel, normally the proof voltage must be reduced in function of the total parallel capacitance value, see graph.



Proof voltage as function of total parallel capacitance

- These capacitors are not intended for continuous pulse applications. For these situations, capacitors of the AC and pulse programs must be used
- The maximum ambient temperature must not exceed 105 °C
- Rated voltage pulse slope:
  if the pulse voltage is lower than the rated voltage, the values of the specific reference data can be multiplied by 670 V_{DC} and divided by the applied voltage

6. Terminal strength (leaded)	Test as per MIL-STD 202, method 211 Test leaded device lead integrity only. A (pull-test): 2.27 kg (10 s) - C (wire-lead bend test): 227 g (3 x 3 s)	30	No visual damage
7. Resistance to solvents	MIL-STD-202 method 215 - Also aqueous chemical - OKEM clean or equivalent Do not use banned solvents.	5	No visual damage Legible marking
8. Mechanical shock	MIL-STD-202 method 213 100 *g*'s ; 6 ms half-sine; 3.75 m/s	30	No visual damage
9. Vibration	MIL-STD-202 method 204 5 *g*'s for 20 min; 12 cycles x 3 directions 10 Hz to 2000 Hz	30	No visual damage
10. Resistance to soldering heat	MIL-STD-202 method 210 Temperature: 280 °C; Time: 10 s Procedure 1 solder within 1.5 mm of device body	30	$\lvert\Delta C/C\rvert \leq 5$ % Increase of tan δ: ≤ 0.008 for C $\leq$ 1 µF at 10 kHz ≤ 0.005 for C > 1 µF at 1 kHz IR > 50 % of initial specified value
11. Solderability	J-STD-002 Leaded: method A at 235 °C, category 3	15	Good tinning as evidence by free flowing of the solder with wetting of terminations > 95 %
12. Electrical characterization	-	30	-
13. Flammability	UL 94 One flame application Class B	15	V-0 or V-1 are acceptable. Class B or C acc. IEC is also acceptable

Vishay Intertechnology, Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, “Vishay”), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Vishay makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product. To the maximum extent permitted by applicable law, Vishay disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on Vishay's knowledge of typical requirements that are often placed on Vishay products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and / or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.
