

Raspberry Pi Compatible SNES Controller

Gaming on the Raspberry Pi has never felt so nostalgic! Go retro with this wired, USB game controller in the classic "SNES" design.

This is not an official Nintendo product, but a 3rd party USB type replica of the Super Nintendo/Famicom unit produced in the early 90's!.

It feels like finding the perfect USB controller for the Raspberry Pi has taken us forever. We tested a dozen samples from an array of manufacturers before finding a model we were confident sell on our website.
