NOMENCLATURE:

The Cat Nos. $\underline{X-1744511-Y}$ are designated as follows:

Example: X Y II

I: - X=0-1 and represents the number of contact positions.

II: - Y=0-9 and represents the number of contact positions.

The Cat Nos. $\underline{X-1744524-Y}$ are designated as follows:

Example: X Y II

- I: $\underline{X=0-9}$ and represents the number of contact positions, different contact omissions, and keying options.
- II: Y=1-9 and represents the number of contact positions, different contact omissions, and keying options.

ENGINEERING CONSIDERATIONS (NOT FOR UL REPRESENTATIVE USE):

Use - For use only in complete equipment where the acceptability of the combination is determined by Underwriters Laboratories Inc.

Condition of Acceptability - In order to be judged acceptable as component of electrical equipment, the following conditions should be met.

- 1. These devices should be used only where they will not interrupt the current.
- 2. Cat. No. 1123722, mated with 1123723has been investigated for a current of 5.0 A carried by each pole, when using 22 AWG wire, with a maximum temperature rise of 25.8° C.
- 3. Cat. No. 1123722, mated with 1123723 has been investigated for a current of 5.0 A carried by each pole, when using 20 AWG wire, with a maximum temperature rise of 15.5°C .
- 4. Cat. NO. 1123722, mated with 1123723 has been investigated for a current of 7.5 A carried by each pole, when using 18 AWG wire, with a maximum temperature rise of 27°C .

| | | and Report | | | |

- 5. Cat. No. 1123823, mated with 1123824 has been investigated for a current of 5.0 A carried by each pole, when using 22 AWG wire, with a maximum temperature rise of 12.2° C.
- 6. Cat. No. 1123823, mated with 1123824 has been investigated for a current of 6.0 A carried by each pole, when using 20 AWG wire, with a maximum temperature rise of 12.2° C.
- 7. Cat. No. 1123823, mated with 1123824 has been investigated for a current of 8.0 A carried by each pole, when using 18 AWG wire, with a maximum temperature rise of 15.0° C.

7A. These devices have been subjected to the Temperature test with the rated currents and maximum temperature rise and recorded temperature (adjusted to $25\,^{\circ}C$ ambient) values tabulated below:

| | | Maximum Temperature °C | | |
|-------------|------------|------------------------|-------------|--|
| | | | Recorded | |
| Cat Nos. | Current, A | Rise | Temperature | |
| | 7.5 | 24.6 | 49.6 | |
| 1-1744055-2 | 6 | 23.0 | 48.0 | |
| | 5 | 23.6 | 48.6 | |

- 8. The suitability of the mounting means shall be determined in the end use.
- 9. The placement of these devices within the equipment enclosure should be such that spacings between the live parts and the equipment are suitable for the particular application.

- 10. The suitability of the minimum 2.6 mm (0.10 in) spacings between live parts of opposite polarity (including adjacent poles) and between live parts and exposed dead-metal parts shall be the end use.
- 11. The electrical and mechanical contact between the connector and the printed circuit board is to be judged in the end-use equipment.
- 12. The electrical and mechanical contact between the connector and the wire is to be judged in the end-use equipment.
- 13. The factory assembled contacts have been inspected for the following wire ranges and maximum tensile forces.

| Part No. | Wire Range (AWG) | Tensile force (lb) |
|----------|------------------|--------------------|
| 1123721 | 22, 20 | 8 |
| 1123721 | 18 | 20 |

- 14. The suitability of the insulating materials used in the molded bodies shall be judged in the end-use equipment.
- 15. The operating temperature of these devices should not exceed the temperature rating of the insulating materials. These materials may be used interchangeably at a maximum temperature of 95°C .
- 16. The Economy Power Connector Plugs (max 11 position) molded from RM No. 1573697, have not been evaluated for electrical ratings.

- 17. Right angle header, Cat. No. x-1744428-y where x is either "1" or omitted and y can be any number from 0-9, shall only be molded of Tyco Raw Material P/N 1573697.
- 18. These devices employ insulating materials with properties as tabulated below at the minimum thickness employed in the connector housing, the suitability of the insulating materials based on the documented values shall be determined in the end-use application. Please note the values specified in the table when multiple materials are indicated represent the minimum values for the group of materials.
