Product Highlights

Quick disconnects allow for quickly connecting or disconnecting a terminal. The front end of the terminal has a female-type receptacle which allows the terminal to slide onto and off of a male blade.
Spades have the open tongue end used for rapid insertion on the mounting screw. The spade is usually used on free standing studs.
Closed-end connectors are used in a variety of situations to "pigtail" or tie together 2 or more wires.
Butt Splices allow two stripped wires to be inserted into each end and "butt" in the center, with the crimp securing both wires together.

- Color-coded insulator allows easy identification of terminal size and wire gauge.
- A wire stop stamped into the crimp barrel prevents insertion of over-stripped wires.
- Terminal's funnel entrance is designed for increased crimping rates by speeding wire delivery into the crimp section and eliminating wire strand fold back.
- The spade's open tongue end is for rapid insertion on the mounting screw / stud
- The basic ring tongue type is the safest and most reliable because it cannot be disconnected unless the screw is completely removed.
