

JST-PH Female to JST-SM Male Adapter

PRT-14708

This simple adapter wire terminates on one end with a JST-PH Female connector, and a JST-SM Male connector on the other. It can be used as a bridge between their respective connector mates. Each wire is 95mm long and is capable of supporting up to 300V

We actually ordered these wires to provide a handy adapter for our EL products but unfortunately we received them with swapped connectors. We still wanted to offer these to all of you in case you could find a use for them!

Note: Since this product belongs to our "Ding & Dent" category, once we are out of stock, we will not carry it again. Get them while you can! We also cannot accept requests/returns/exchanges, provide documentation or provide support on any aspect of these items.
