### 8. ACCESS INTERFACE

The W83195BR-416 provides I<sup>2</sup>C Serial Bus for microprocessor to read/write internal registers. In the W83195BR-416 is provided Block Read/Block Write and Byte-Data Read/Write protocol. The I<sup>2</sup>C address is defined at 0xD2.

The register number is increased by one if using byte data read/write protocol.

**Example:** In block mode, byte number of program register is 1  
 In byte mode, byte number of program register is 2 (Byte number of block mode + 1)

#### 8.1 Block Write protocol

#### 8.2 Block Read protocol

## In block mode, the command code must filled 8'h00

#### 8.3 Byte Write protocol

#### 8.4 Byte Read protocol

### 9. SPECIFICATIONS

#### 9.1 ABSOLUTE MAXIMUM RATINGS

Stresses greater than those listed in this table may cause permanent damage to the device. Precautions should be taken to avoid application of any voltage higher than the maximum rated voltages to this circuit. Subjection to maximum conditions for extended periods may affect reliability. Unused inputs must always be tied to an appropriate logic voltage level (Ground or VDD).
