

54F/74F169 4-Stage Synchronous Bidirectional Counter

General Description

The 'F169 is a fully synchronous 4-stage up/down counter. The 'F169 is a modulo-16 binary counter. Features a preset capability for programmable operation, carry lookahead for easy cascading and a \mbox{U}/\mbox{D} input to control the direction of counting. All state changes, whether in counting or parallel loading, are initiated by the LOW-to-HIGH transition of the clock.

Features

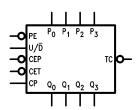

- Asynchronous counting and loading
- Built-in lookahead carry capability
- Presettable for programmable operation

Commercial	Military	Package Number	Package Description
74F169PC		N16E	16-Lead (0.300" Wide) Molded Dual-In-Line
	54F169DM (Note 2)	J16A	16-Lead Ceramic Dual-In-Line
74F169SC (Note 1)		M16A	16-Lead (0.150" Wide) Molded Small Outline, JEDEC
74F169SJ (Note 1)		M16D	16-Lead (0.300" Wide) Molded Small Outline, EIAJ

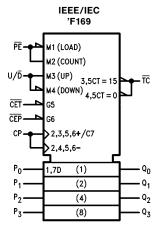

Note 1: Devices also available in 13" reel. Use suffix = SCX and SJX.

Note 2: Military grade device with environmental and burn-in processing. Use suffix = DMQB.

P ₀ -P ₃	Parallel Data Inputs	1.0/1.0	20 μA/ - 0.6 mA				
PE	Parallel Enable Input (Active LOW)	1.0/1.0	20 μA/ - 0.6 mA				
U/D	Up-Down Count Control Input	1.0/1.0	20 μA/ – 0.6 mA				
$Q_0 - Q_3$	Flip-Flop Outputs	50/33.3	-1 mA/20 mA				
TC	Terminal Count Output (Active LOW)	50/33.3	-1 mA/20 mA				

Functional Description

The 'F169 uses edge-triggered J-K type flip-flops and has no constraints on changing the control or data input signals in either state of the clock. The only requirement is that the various inputs attain the desired state at least a setup time before the rising edge of the clock and remain valid for the recommended hold time thereafter. The parallel load operation takes precedence over other operations, as indicated in the Mode Select Table. When $\overline{\text{PE}}$ is LOW, the data on the P_0-P_3 inputs enters the flip-flops on the next rising edge of the clock. In order for counting to occur, both $\overline{\text{CEP}}$ and $\overline{\text{CET}}$ must be LOW and $\overline{\text{PE}}$ must be HIGH; the U/ $\overline{\text{D}}$ input then determines the direction of counting. The Terminal Count ($\overline{\text{TC}}$) output is normally HIGH and goes LOW, provided that

 $\overline{\text{CET}}$ is LOW, when a counter reaches zero in the Count Down mode or reaches 15 for the 'F169 in the Count Up mode. The $\overline{\text{TC}}$ output state is not a function of the Count Enable Parallel ($\overline{\text{CEP}}$) input level. Since the $\overline{\text{TC}}$ signal is derived by decoding the flip-flop states, there exists the possibility of decoding spikes on $\overline{\text{TC}}$. For this reason the use of $\overline{\text{TC}}$ as a clock signal is not recommended (see logic equations below).

- 1) Count Enable = CEP CET PE
- 2) Up: ('F169): $\overline{\text{TC}} = Q_0 \bullet Q_1 \bullet Q_2 \bullet Q_3 \bullet \text{(Up)} \bullet \overline{\text{CET}}$
- 3) Down: $\overline{\text{TC}} = \overline{Q}_0 \bullet \overline{Q}_1 \bullet \overline{Q}_2 \bullet \overline{Q}_3 \bullet \text{(Down)} \bullet \overline{\text{CET}}$

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

V_{CC} Pin Potential to

Ground Pin -0.5V to +7.0V
Input Voltage (Note 2) -0.5V to +7.0V
Input Current (Note 2) -30 mA to +5.0 mA

Voltage Applied to Output

in HIGH State (with $V_{CC} = 0V$)

 $\begin{array}{ll} \text{Standard Output} & -0.5 \text{V to V}_{\text{CC}} \\ \text{TRI-STATE} \tiny{\textcircled{\tiny{\$}}} \text{ Output} & -0.5 \text{V to } +5.5 \text{V} \end{array}$

Current Applied to Output

in LOW State (Max) twice the rated I_{OL} (mA)

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

Recommended Operating Conditions

Free Air Ambient Temperature

Military $-55^{\circ}\text{C to} + 125^{\circ}\text{C}$ Commercial $0^{\circ}\text{C to} + 70^{\circ}\text{C}$

Supply Voltage

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
