

## 32-bit Single Chip Microcontroller

- Arm® 32-bit RISC CPU core Cortex®-M0+
- Embedded 72SEG × 32COM LCD driver
- Embedded 512K-byte Flash memory and 128K-byte RAM
- Various interfaces such as UART, QSPI, I<sup>2</sup>C, and USB that support DMA transfer

### DESCRIPTIONS

The S1C31W74 is a 32-bit MCU with an Arm® Cortex®-M0+ processor included that features low-power operation. It incorporates an LCD driver capable of driving up to a 2,304-dot LCD panel, a large-capacity Flash memory, and a lot of serial interface circuits. The S1C31W74 is suitable for various kinds of battery-driven controller applications.

### FEATURES

Model	S1C31W74
<b>CPU</b>	
CPU core	Arm® 32-bit RISC CPU core Cortex®-M0+
Other	Serial-wire debug ports (SW-DP) and a micro trace buffer (MTB) included
<b>Embedded Flash memory</b>	
Capacity	512K bytes (for both instructions and data)
Erase/program count	1,000 times (min.) * When being programmed by the dedicated flash loader
Other	On-board programming function Flash programming voltage can be generated internally.
<b>Embedded RAMs</b>	
General-purpose RAM	128K bytes (shared with MTB)
Display RAM	704 bytes
Instruction cache	512 bytes
<b>DMA controller (DMAC)</b>	
Number of channels	4 channels
Data transfer path	Memory to memory, memory to peripheral, and peripheral to memory
Transfer mode	Basic, ping-pong, scatter-gather
DMA trigger source	UART2, SPIA, QSPI, I <sup>2</sup> C, USB, T16B, SNDA, and software
<b>Clock generator (CLG)</b>	
System clock source	4 sources (IOSC/OSC1/OSC3/EXOSC)
System clock frequency (operating frequency)	V <sub>D1</sub> voltage mode = mode0: 21 MHz (max.) V <sub>D1</sub> voltage mode = mode1: 2.1 MHz (max.)
IOSC oscillator circuit (boot clock source)	V <sub>D1</sub> voltage mode = mode0: 20/16/12/8/2/1 MHz (typ.) software selectable V <sub>D1</sub> voltage mode = mode1: 2/1 MHz (typ.) software selectable 10 μs (max.) starting time (time from cancelation of SLEEP state to vector table read by the CPU)
OSC1 oscillator circuit	32.768 kHz (typ.) crystal oscillator Oscillation stop detection circuit included
OSC3 oscillator circuit	20.5 MHz (max.) crystal/ceramic oscillator
EXOSC clock input	21 MHz (max.) square or sine wave input
Other	Configurable system clock division ratio Configurable system clock used at wake up from SLEEP state Operating clock frequency for the CPU and all peripheral circuits is selectable.
<b>I/O port (PPORT)</b>	
Number of general-purpose I/O ports	71 bits (max.) Pins are shared with the peripheral I/O.
Number of input interrupt ports	67 bits (max.)
Number of ports that support universal port multiplexer (UPMUX)	24 bits A peripheral circuit I/O function selected via software can be assigned to each port.
<b>Timers</b>	
Watchdog timer (WDT2)	Generates NMI or watchdog timer reset. Programmable NMI/reset generation cycle
Real-time clock (RTCA)	128–1 Hz counter, second/minute/hour/day/day of the week/month/year counters Theoretical regulation function for 1-second correction Alarm and stopwatch functions
16-bit timer (T16)	4 channels Generates the SPIA and QSPI master clocks.
16-bit PWM timer (T16B)	2 channels Event counter/capture function PWM waveform generation function Number of PWM output or capture input ports: 2 ports/channel

# S1C31W74

Model	S1C31W74
<b>Supply voltage detector (SVD2)</b>	
Number of channels	2 channels
Detection level	32 levels (1.7 to 4.3 V)
Other	Intermittent operation mode Generates an interrupt or reset (Ch.0) according to the detection level evaluation.
<b>Serial interfaces</b>	
UART (UART2)	2 channels Baud-rate generator included, IrDA1.0 supported Open drain output, signal polarity, and baud rate division ratio are configurable.
Synchronous serial interface (SPIA)	1 channel 2 to 16-bit variable data length The 16-bit timer (T16) can be used for the baud-rate generator in master mode.
Quad synchronous serial interface (QSPI)	1 channel Supports single, dual, and quad transfer modes. Low CPU overhead memory mapped access mode that can directly read data from the external flash memory with XIP (eXecute-In-Place) mode.
I <sup>2</sup> C (I2C) *1	2 channels Baud-rate generator included
<b>USB 2.0 FS device controller (USB)</b>	
Number of transceiver/receiver channels	1 channel
Transfer rate	FS (12 Mbps)
Clock source	48 MHz crystal oscillator or OSC3 (12 MHz) + PLL selectable
Number of endpoints	4 endpoints (3 general-purpose endpoints and endpoint 0)
Power supply	Voltage regulators for USB included
<b>Sound generator (SNDA)</b>	
Buzzer output function	512 Hz to 16 kHz output frequencies One-shot output function
Melody generation function	Pitch: 128 Hz to 16 kHz ≈ C3 to C6 Duration: 7 notes/rests (Half note/rest to thirty-second note/rest) Tempo: 16 tempos (30 to 480) Tie/slur may be specified.
<b>IR remote controller (REMC2)</b>	
Number of transmitter channels	1 channel
Other	EL lamp drive waveform can be generated (by the hardware) for an application example.
<b>LCD driver (LCD32B)</b>	
LCD output	88SEG × 1–16COM (max.), 80SEG × 17–24COM (max.), 72SEG × 25–32COM (max.)
LCD contrast	16 levels
Other	1/5 or 1/4 bias power supply included, external voltage can be applied.
<b>R/F converter (RFC)</b>	
Conversion method	CR oscillation type with 24-bit counters
Number of conversion channels	1 channel (Up to two sensors can be connected.)
Supported sensors	DC-bias resistive sensors, AC-bias resistive sensors
<b>Reset</b>	
#RESET pin	Reset when the reset pin is set to low.
Power-on reset	Reset at power on.
Brownout reset	Reset when the power supply voltage drops (when V <sub>DD</sub> ≤ 1.45 V (typ.) is detected).
Key entry reset	Reset when the P00 to P01/P02/P03 keys are pressed simultaneously (can be enabled/disabled using a register).
Watchdog timer reset	Reset when the watchdog timer overflows (can be enabled/disabled using a register).
Supply voltage detector reset	Reset when the supply voltage detector detects the set voltage level (can be enabled/disabled using a register).
<b>Interrupt</b>	
Non-maskable interrupt	6 systems (Reset, NMI, HardFault, SVCcall, PendSV, SysTic)
Programmable interrupt	External interrupt: 1 system Internal interrupt: 23 systems
<b>Power supply voltage</b>	
V <sub>DD</sub> operating voltage	1.8 to 3.6 V
V <sub>DD</sub> operating voltage for Flash programming	2.4 to 3.6 V (when V <sub>PP</sub> is supplied externally) 2.4 to 3.6 V (when V <sub>PP</sub> is generated internally)
V <sub>DD</sub> operating voltage when LCD driver is used	2.5 to 3.6 V
<b>Operating temperature</b>	
Operating temperature range	-40 to 85 °C
<b>Current consumption (Typ. value)</b>	
SLEEP mode *2	0.4 μA IOSC = OFF, OSC1 = OFF, OSC3 = OFF 0.9 μA IOSC = OFF, OSC1 = ON, OSC3 = OFF, RTC = ON

# S1C31W74

Model	S1C31W74
<b>Current consumption (Typ. value)</b>	
HALT mode *3	1.7 $\mu$ A OSC1 = 32 kHz
	7.7 $\mu$ A OSC1 = 32 kHz, LCD = ON (no panel load)
RUN mode	250 $\mu$ A/MHz V <sub>D1</sub> voltage mode = mode0, CPU = IOSC
	150 $\mu$ A/MHz V <sub>D1</sub> voltage mode = mode1, CPU = IOSC
<b>Shipping form</b>	
1 *4	VFBGA8H-181 (P-VFBGA-181-0808-0.50, 8 × 8 mm, t = 1.0 mm, 0.5 mm pitch)
2	Die form (pad pitch: 80 $\mu$ m (min.))

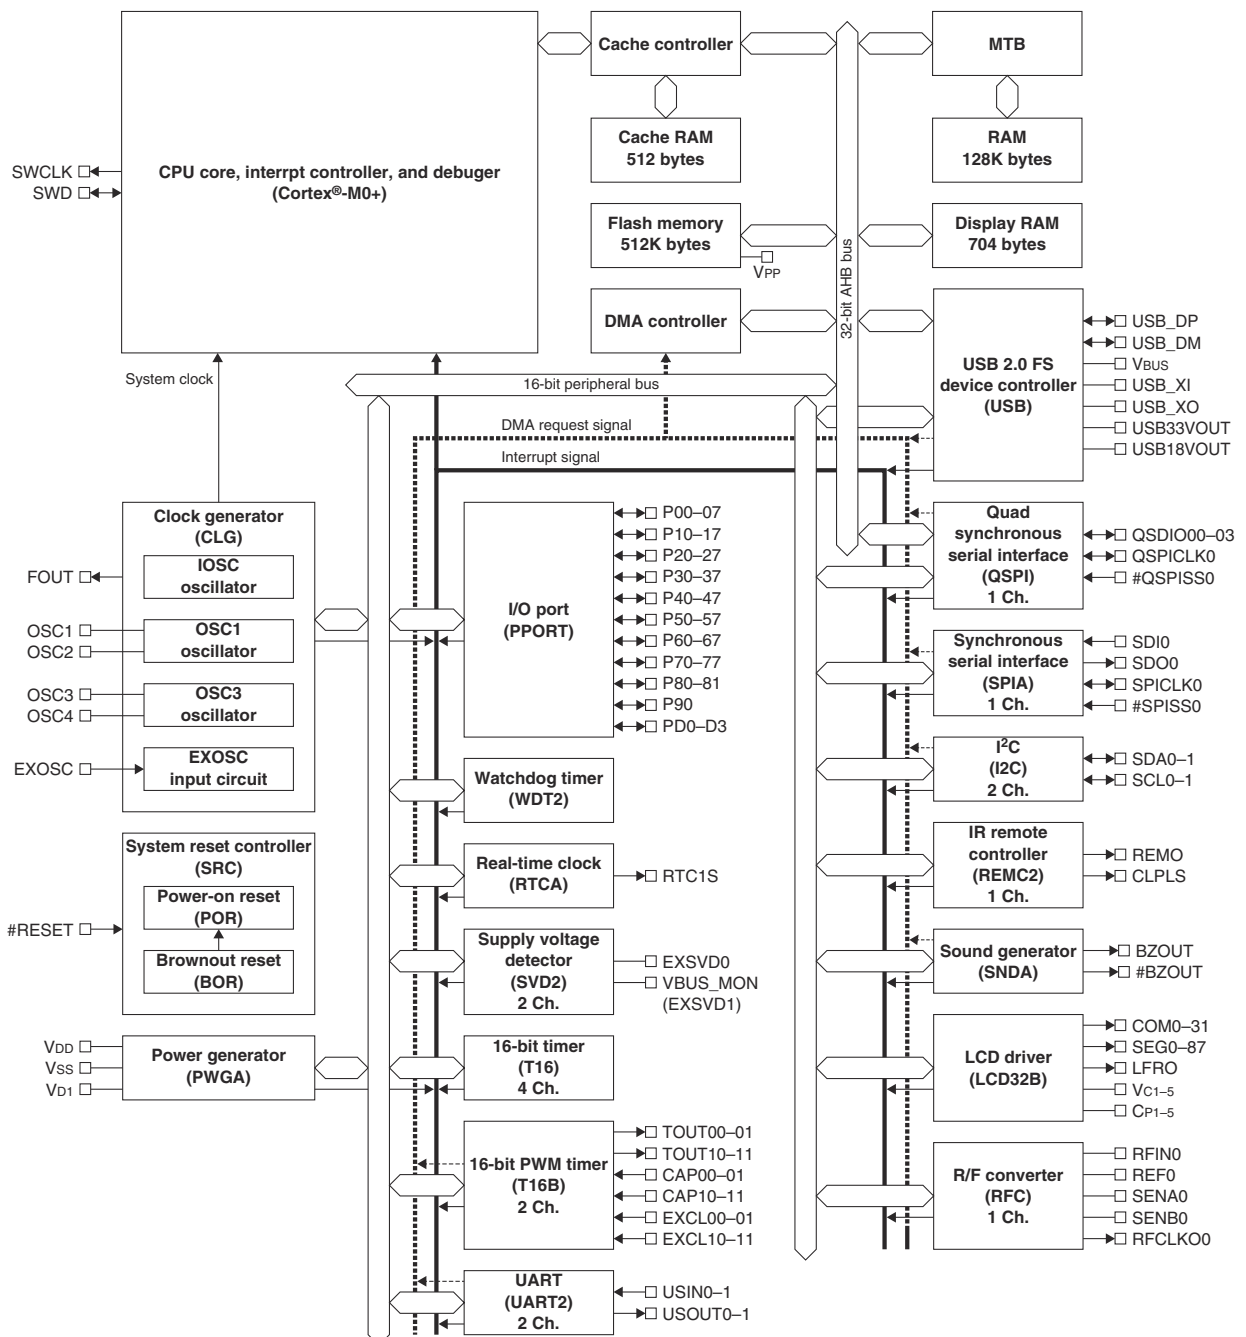

\*1 The input filter in I2C (SDA and SCL inputs) does not comply with the standard for removing noise spikes less than 50 ns.

\*2 SLEEP mode refers to deep sleep mode in the Cortex®-M0+ processor. The RAM retains data even in SLEEP mode.

\*3 HALT mode refers to sleep mode in the Cortex®-M0+ processor.

\*4 Shown in parentheses is a JEITA package name.

## ■ PIN DESCRIPTIONS

### Symbol meanings

Assigned signal: The signal listed at the top of each pin is assigned in the initial state. The pin function must be switched via software to assign another signal (see the “I/O Ports” chapter).

I/O:	I	= Input
	O	= Output
	I/O	= Input/output
	P	= Power supply
	A	= Analog signal
	Hi-Z	= High impedance state
Initial state:	I (Pull-up)	= Input with pulled up
	I (Pull-down)	= Input with pulled down
	Hi-Z	= High impedance state
	O (H)	= High level output
	O (L)	= Low level output

Tolerant fail-safe structure:

= Over voltage tolerant fail-safe type I/O cell included (see the “I/O Ports” chapter)

The over voltage tolerant fail-safe type I/O cell allows interfacing without passing unnecessary current even if a voltage exceeding  $V_{DD}$  is applied to the port. Also unnecessary current is not consumed when the port is externally biased without supplying  $V_{DD}$ .

Pin name	Assigned signal	I/O	Initial state	Tolerant fail-safe structure	Function
$V_{DD}$	$V_{DD}$	P	–	–	Power supply (+)
$V_{SS}$	$V_{SS}$	P	–	–	GND
$V_{PP}$	$V_{PP}$	P	–	–	Power supply for Flash programming
$V_{D1}$	$V_{D1}$	A	–	–	$V_{D1}$ regulator output
$V_{C1-5}$	$V_{C1-5}$	P	–	–	LCD panel driver power supply
$CP1-5$	$CP1-5$	A	–	–	LCD power supply booster capacitor connect pins
OSC1	OSC1	A	–	–	OSC1 oscillator circuit input
OSC2	OSC2	A	–	–	OSC1 oscillator circuit output

## Universal port multiplexer (UPMUX)

The universal port multiplexer (UPMUX) allows software to select the peripheral circuit input/output function to be assigned to each pin from those listed below. Note, however, that a function cannot be assigned to two or more pins simultaneously.

Peripheral circuit	Signal to be assigned	I/O	Channel number $n$	Function
I <sup>2</sup> C (I2C)	SCL $n$	I/O	$n = 0, 1$	I <sup>2</sup> C Ch. $n$ clock input/output
	SDA $n$	I/O		I <sup>2</sup> C Ch. $n$ data input/output
UART (UART2)	USIN $n$	I	$n = 0, 1$	UART2 Ch. $n$ data input
	USOUT $n$	O		UART2 Ch. $n$ data output
16-bit PWM timer (T16B)	TOUT $n$ 0/CAP $n$ 0	I/O	$n = 0, 1$	T16B Ch. $n$ PWM output/capture input 0
	TOUT $n$ 1/CAP $n$ 1	I/O		T16B Ch. $n$ PWM output/capture input 1

## ■ BASIC EXTERNAL CONNECTION DIAGRAM

- \*1: For Flash programming
- \*2: When the LCD driver is used
- \*3: When 1/4 bias is selected
- \*4: When 1/5 bias is selected
- ( ): Do not mount components if unnecessary.

## **NOTICE : PLEASE READ CAREFULLY BELOW BEFORE USING THIS DOCUMENT**

The contents of this document are subject to change without notice.

1. This document may not be copied, reproduced, or used for any other purpose, in whole or in part, without the consent of the Seiko Epson Corporation ("Epson").
2. Before purchasing or using Epson products, please contact our sales representative for the latest information and always be sure to check the latest information published on Epson's official web sites and other sources.
3. Information provided in this document such as application circuits, programs, usage, etc., are for reference purposes only. Using the application circuits, programs, usage, etc. in the design of your equipment or systems is your own responsibility. Epson makes no guarantees against any infringements or damages to any third parties' intellectual property rights or any other rights resulting from the information. This document does not grant you any licenses, intellectual property rights or any other rights with respect to Epson products owned by Epson or any third parties.
4. Epson is committed to constantly improving quality and reliability, but semiconductor products in general are subject to malfunction and failure. By using Epson products, you shall be responsible for your hardware. Software and systems must be designed well enough to prevent death or injury as well as any property damage even if any of the malfunctions or failures might be caused by Epson products. When designing your products using Epson products, please be sure to check and comply with the latest information regarding Epson products (this document, specifications, data sheets, manuals, Epson's web site, etc.). When using the information included above materials such as product data, charts, technical contents, programs, algorithms and application circuit examples, you shall evaluate your products both on a stand-alone basis as well as within your overall systems. You shall be solely responsible for deciding whether or not to adopt and use Epson products.
5. Epson has prepared this document and programs provided in this document carefully to be accurate and dependable, but Epson does not guarantee that the information and the programs are always accurate and complete. Epson assumes no responsibility for any damages which you incur due to misinformation in this document and the programs.
6. No dismantling, analysis, reverse engineering, modification, alteration, adaptation, reproduction, etc., of Epson products is allowed.
7. Epson products have been designed, developed and manufactured to be used in general electronic applications (office equipment, communications equipment, measuring instruments, home electronics, etc.) and applications individually listed in this document ("General Purpose"). Epson products are NOT intended for any use beyond the General Purpose uses that requires particular/higher quality or reliability in order to refrain from causing any malfunction or failure leading to death, injury, serious property damage or severe impact on society, including, but not limited to those listed below. Therefore, you are advised to use Epson products only for General Purpose uses. Should you desire to buy and use Epson products for a particular purpose other than a General Purpose use, Epson makes no warranty and disclaims with respect to Epson products, whether express or implied, including without limitation any implied warranty of merchantability or fitness for any particular purpose. Please be sure to contact our sales representative and obtain approval in advance.
  - [Particular purpose]
  - Space equipment (artificial satellites, rockets, etc.)
  - Transportation vehicles and their control equipment (automobiles, aircraft, trains, ships, etc.)
  - Medical equipment (other than applications individually listed in this document) / Relay equipment to be placed on ocean floor
  - Power station control equipment / Disaster or crime prevention equipment / Traffic control equipment / Financial equipment
  - Other applications requiring similar levels of reliability as those listed above
8. Epson products listed in this document and our associated technologies shall not be used in any equipment or systems that laws and regulations in Japan or any other countries prohibit to manufacture, use or sell. Furthermore, Epson products and our associated technologies shall not be used for developing weapons of mass destruction, or any other military purposes or applications. If exporting Epson products or our associated technologies, you shall comply with the Foreign Exchange and Foreign Trade Control Act in Japan, Export Administration Regulations in the U.S.A. (EAR) and other export-related laws and regulations in Japan and any other countries and follow the required procedures as provided by the relevant laws and regulations.
9. Epson assumes no responsibility for any damages (whether direct or indirect) caused by or in relation with your non-compliance with the terms and conditions in this document.
10. Epson assumes no responsibility for any damages (whether direct or indirect) incurred by any third party that you assign, transfer, loan, etc., Epson products to.
11. For more details or other concerns about this document, please contact our sales representative.
12. Company names and product names listed in this document are trademarks or registered trademarks of their respective companies.
