

EVK-N2

SARA-N2 series cellular evaluation kits

User guide

Abstract

This guide explains how to set up the EVK-N2 evaluation kits to begin evaluating u-blox SARA-N2 series cellular modules supporting LTE Cat NB1 radio access technology.

1 Starting up

1.1 EVK-N2 overview

The EVK-N2 evaluation kits are powerful and easy-to-use tools that simplify the evaluation of u-blox SARA-N2 series Narrow Band Internet of Things (NB-IoT) modules.

The following evaluation kits are available with u-blox SARA-N2 cellular modules:

- EVK-N200 evaluation kit is for evaluation of SARA-N200
- EVK-N201 evaluation kit is for evaluation of SARA-N201
- EVK-N210 evaluation kit is for evaluation of SARA-N210
- EVK-N211 evaluation kit is for evaluation of SARA-N211
- EVK-N280 evaluation kit is for evaluation of SARA-N280

The evaluation kits EVK-N200, EVK-N201, EVK-N210, EVK-N211, and EVK-N280 are herein identified as EVK-N2.

Figure 1: Overview of EVK-N2 evaluation kit for SARA-N2 modules

1.2 EVK-N2 block diagram

Figure 2 shows the main interfaces and internal connections of the EVK-N2 evaluation kit:

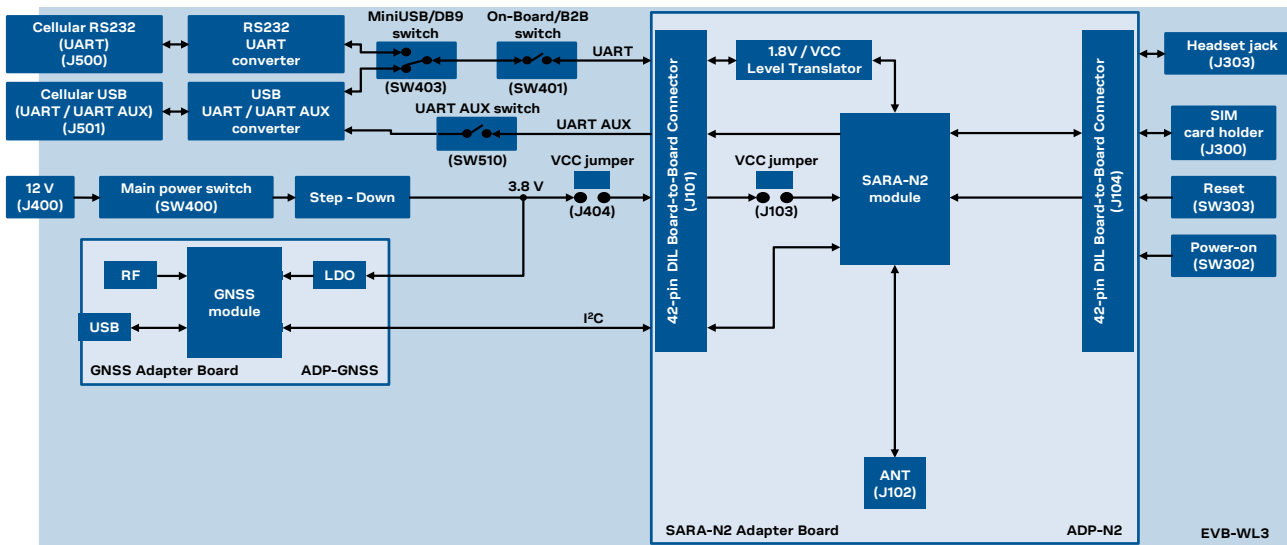

Figure 2: Block diagram of EVK-N2 for SARA-N2 series modules

The EVK-N2 evaluation kit is formed by three boards:

- The lower one, called EVB-WL3, contains the power supply and other peripherals for the SARA-N2 module (e.g. SIM card holder and Reset button).
- The cellular adapter board, called ADP-N2, contains the SARA-N2 module, the cellular antenna connector and the DIL connectors (J101 and J104).
- The GNSS adapter board, called ADP-GNSS, contains the u-blox GNSS module, the GNSS antenna connector and the USB connector for the GNSS module.

The boards are connected by means of male header board-to-board connectors provided on the bottom of the adapter boards and their corresponding female connectors provided on top of the lower board.

The SARA-N2 series pins are available on the Dual-In-Line male Board-to-Board connectors provided on the top layer of the cellular Adapter Board (J101 and J104), which are pin-to-pin compatible to the connectors on the bottom layer of the adapter board EVB-WL3.

Communication with the SARA-N2 module is provided through the Cellular RS232 DB9 connector (J500) or the Cellular USB Mini-USB connector (J501), available on the EVB-WL3 board. The UART interface of the SARA-N2 module is routed up to both connectors J500 and J501. The Mini-USB / DB9 slide switch (SW403) must be set according to the selected connector. The Cellular USB Mini-USB connector (J501) provides also access to the secondary / auxiliary UART interface of the SARA-N2 module (see section 1.8).

The lower board (EVB-WL3) is designed also to be used with other u-blox cellular adapter boards. It contains additional switches, jumpers, connectors, LEDs and parts that are partially described in Figure 1 or in this document, because they are intended for use only with other u-blox cellular modules. It is recommended to leave any additional connector unconnected and any additional switch in its default configuration.

1.3 Switches, jumpers and buttons

Function	Description	Name	Board
Main Power Switch	Power on / off of the whole evaluation kit	SW400	EVB-WL3
Cellular VCC Jumper	Jumper socket to provide the 3.8 V supply to the cellular module VCC input	J404	EVB-WL3
		J103	ADP-N2
Cellular Power-on	Push button (unconnected, as not supported by SARA-N2 series)	SW302	EVB-WL3
Cellular Reset	Push button to reset the cellular module	SW303	EVB-WL3
Cellular UART detach	Slide switch to attach / detach cellular module UART from USB / RS232 connectors: when detached, UART signals are available only on DIL B2B connectors on ADP board	SW401	EVB-WL3
Cellular UART routing	Slide switch to select cellular module UART routing on USB or on RS232 connectors	SW403	EVB-WL3
Cellular UART AUX detach	Slide switch to attach / detach cellular module UART AUX from USB connector: when detached, UART AUX signals available only on the DIL B2B connector on ADP board	SW510	EVB-WL3
Cellular GPIO detach	Slide switch to attach / detach the cellular module GPIOs from peripherals: when detached, the signals are available only on the DIL B2B connectors on ADP board	SW300	EVB-WL3
Cellular GNSS detach	Slide switch to attach / detach the cellular module to the GNSS module (GPIO2): when detached, the signals are available only on DIL B2B connector on ADP board	SW304	EVB-WL3
GNSS V_BCKP	Slide switch to connect / disconnect backup battery to V_BCKP pin of the GNSS module	SW204	EVB-WL3

Table 1: EVK-N2 switch, jumpers and button' descriptions

1.4 LEDs

Function	Description	LED #	Board	Color
Main Power	Power supply plugged in the 9 - 18 V Power Input	DL401	EVB-WL3	
Cellular VCC	Cellular module supplied. Main Power Switch must be switched on	DL400	EVB-WL3	
		DS147	ADP-N2	
Cellular USB	USB cable plugged in the Cellular USB connector for UART / UART AUX access	DL501	EVB-WL3	
Cellular USB / UART	Green light is activated when UART is routed to the Cellular USB connector Red light blinks at UART TX or RX data on the Cellular USB connector	DL403	EVB-WL3	
Cellular UART detach	UART signals are available only on the DIL B2B connector on ADP board	DL404	EVB-WL3	
Cellular RS232 / UART	Green light is activated when UART is routed to the Cellular RS232 connector Red light blinks at UART TX or RX data on the Cellular RS232 connector	DL405	EVB-WL3	
Cellular USB / UART AUX	Green light is activated when UART AUX is routed to Cellular USB connector Red light blinks at UART AUX data on the Cellular USB connector	DL503	EVB-WL3	
Cellular CTS indicator	Green light is activated when CTS line turns ON (active low)	DS500	EVB-WL3	
Cellular GPIO1 indicator	Green light is activated when SARA-N2 GPIO1 is high	DS107	EVB-WL3	
Cellular GPIO3 indicator	Green light is activated when SARA-N2 GPIO2 is high	DS109	EVB-WL3	
SIM supply	Green light is activated when the VSIM line is at a "high" level	DS100	ADP-N2	
V_INT supply	Green light is activated when the V_INT line is at a "high" level	DS101	ADP-N2	
GNSS VCC supply	GNSS module supply is turned ON	DS118	ADP-GNSS	
GNSS USB	USB cable plugged in GNSS USB connector	DS124	ADP-GNSS	
GNSS Timepulse	Pulses at 1 Hz when valid GNSS fix	DS121	ADP-GNSS	
Cellular / GNSS DDC	Cellular / GNSS module communication over the DDC (I ² C) interface	DS132	ADP-GNSS	

Table 2: EVK-N2 LED descriptions

1.5 Connectors

Function	Description	Name	Board
9 - 18 V Power Input	Connector for the AC / DC power adapter of the EVK  IEC 60417-5172 Class II equipment AC: 100-240 V, 0.8 A, 50-60 Hz / DC: +12 V, 2.5 A	J400	EVb-WL3
SIM card holder	SIM card holder	J300	EVb-WL3
Cellular antenna	SMA connector for the module cellular antenna ANT	J102	ADP-N2
Cellular USB (UART)	Mini USB connector for the cellular module UART interfaces converted as USB interface	J501	EVb-WL3
Cellular RS232 (UART)	DB9 connector for the cellular module primary UART interface converted as RS232 interface	J500	EVb-WL3
DIL B2B headers	Dual-In-Line Board-to-Board connectors for cellular module interfaces	J101-J104	ADP-N2
Cellular headset	Audio headset jack connector (not supported by SARA-N2 series)	J303	EVb-WL3
GNSS antenna	SMA connector for the GNSS module antenna (GNSS Antenna)	J103	ADP-GNSS
GNSS USB	Mini USB connector for the GNSS module USB interface	J102	ADP-GNSS
GNSS backup battery	Backup battery socket for the GNSS module (under GNSS adapter board)	BT200	EVb-WL3
GND	Ground terminals for the probe reference	J402, J403 J405, J406	EVb-WL3

Table 3: Description of EVK-N2 connectors

-  CAUTION! IN THE UNLIKELY EVENT OF A FAILURE IN THE INTERNAL PROTECTION CIRCUITRY THERE IS A RISK OF AN EXPLOSION WHEN CHARGING A FULLY OR PARTIALLY DISCHARGED BATTERY. REPLACE THE BATTERY WHEN IT NO LONGER HAS A SUFFICIENT CHARGE FOR UNIT OPERATION. CONTROL THE BATTERY BEFORE USE IF THE DEVICE HAS NOT BEEN USED FOR AN EXTENDED PERIOD OF TIME.
-  CAUTION! RISK OF EXPLOSION IF BATTERY IS REPLACED WITH AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS!

1.6 EVK-N2 pin out

SARA-N2 module		DIL B2B Connector		SARA-N2 module		DIL B2B Connector	
Pin N°	Signal Name	Name / Pin N°	Pin N°	Signal Name	Name / Pin N°	Pin N°	Signal Name

Table 5: Pin-out of the 42-pin Dual-In-Line Board-to-Board connectors (J101 and J104) available on the ADP-N2 adapter board of the EVK-N2 evaluation kit

 The pins / interfaces that are not supported by a specific SARA-N2 module product version should be not driven by an external device; see the SARA-N2 series Data Sheet [2] for the list of features supported by each SARA-N2 module product version.

1.7 Software installation

The USB drivers are available with the EVK-N2 evaluation kit package. Executable files can be downloaded from www.u-blox.com/evk-downloads and saved to any location on the computer hard drive. The installation can be started by running the executable file on a computer with the Windows operating system.

1.8 Board setup

1. Insert a SIM card into the **SIM card holder** (J300 on the EVB).
2. Connect a cellular antenna (provided with the evaluation kit) to the **Cellular antenna** SMA connector on the ADP-N2 (ANT, RF input/output for transmission and reception of NB-IoT RF signals)
3. If the GNSS functionality is required, connect the GNSS antenna provided with the evaluation kit to the **GNSS antenna** SMA connector on the ADP-GNSS. Place the GNSS antenna in a location with a good view of the sky.

 Interface to the GNSS module is not supported by SARA-N2 series modules.

4. Connect the AC / DC +12 V power adapter provided with the evaluation kit to **9 – 18 V Power Input** connector (J400 on the EVB). LED DL401 lights blue.
5. Be sure to provide a jumper socket on both the **Cellular VCC supply jumpers** (J404 on the EVB, and J103 on the ADP-N2). These jumpers provide the connection from the output of the supply circuit on the EVB board to the VCC input of the module.
6. To enable the board power supply, turn the **Main power switch** (SW400 on the EVB) to the ON position. LEDs DL400 and DS147 light green. The cellular module switches on.
7. For communication via the cellular module's UART interface, the following connections are allowed and can be alternatively enabled in a mutually exclusive way (see [Table 6](#) for slide switches positions and LED status):
 - a. Connect a USB cable to mini USB connector (**Cellular USB**, J501 on EVB), LED DL501 lights blue.
 In this case, two COM ports are enabled with Windows (the numbering of the COM ports can be seen via the Windows Device Manager):
 - SARA UART interface is available over the first COM port (for AT commands and data)
 - SARA secondary / auxiliary UART interface is available over the second COM port (for diagnostic)
 - b. Connect an RS232 cable to DB9 connector (**Cellular RS232**, J500 on EVB)

Type of connections	SW401	SW403	LED
Access to cellular UART over the Cellular USB (UART / UART AUX) mini USB connector (J501)	ON BOARD	MINIUSB	DL403
Access to cellular UART over the Cellular RS232 (UART) DB9 connector (J500)	ON BOARD	DB9	DL405
Access to cellular UART on DIL Board-to-Board connector on the adapter board: cellular UART detached from USB (UART / UART AUX) and RS232 (UART) connectors	B2B	Do not care	DL404

Table 6: Serial interface configuration

Then, beside the specific serial connector used (case a or case b), run an AT terminal application (as for example the u-blox m-center tool) selecting the appropriate AT COM port with these settings:

- Data rate: 9600 bit/s
- Data bits: 8
- Parity: N
- Stop bits: 1
- Flow control: None

8. It is possible to access SARA-N2 module's secondary / auxiliary UART for diagnostic purpose. To do so:

Connect a USB cable to the mini USB connector (**Cellular USB**, J501 on EVB). LED DL501 lights blue.

In this case, two COM ports are enabled with Windows (the numbering of the COM ports can be seen via the Windows Device Manager):

- SARA-N2 UART interface is available over the first COM port (for AT commands and data)
- SARA-N2 secondary / auxiliary UART interface is available over the second COM port (for diagnostic)

Make sure to appropriately set the related slide switches:

- SW401 set to On-Board
- SW403 set to Mini-USB
- SW510 set to UART1

Then, run a terminal application (as for example the u-blox m-center tool), selecting the appropriate diagnostic COM port with the following settings:

- Data rate: 921600 bit/s
- Data bits: 8
- Parity: N
- Stop bits: 1
- Flow control: None

See Appendix [A](#) for how to configure the u-blox m-center AT terminal for Windows.

B AT commands examples

For the complete description and syntax of the AT commands supported by SARA-N2 series modules, see the SARA-N2 series AT commands Manual [\[1\]](#).

For detailed AT commands examples for network registration and configuration, context activation, data connection management, SIM management, module interfaces configurations and other settings, see the u-blox NB-IoT system User Guide [\[3\]](#).

C Declaration of conformities

The equipment is intended for indoor usage. It is the user's duty to verify if further restrictions apply, such as in airplanes, hospitals or hazardous locations (petrol stations, refineries...).

Any changes or modification made to this equipment will void its compliance to the safety requirements.

Maintenance, inspections and/or repairs of the EVK-N2 evaluation kits shall be performed by u-blox AG.

D Current consumption measurement

Current consumption of SARA-N2 series modules can be measured on the EVK-N2 evaluation kits by removing the jumper socket from the **Cellular VCC supply jumper J103** available on the SARA-N2 Adapter Board, as shown in [Figure 5](#).

Figure 5: Jumper socket to be removed for SARA-N2 modules current consumption measurement

A suitable external digital multi-meter (as for example the Keysight/Agilent 34465A, 34410A or 34411A) can be used for current consumption measurements: in this case the supply circuit on the EVB will supply the SARA-N2 module mounted on the adapter board, with the digital multi-meter placed in series as described in [Figure 6](#).

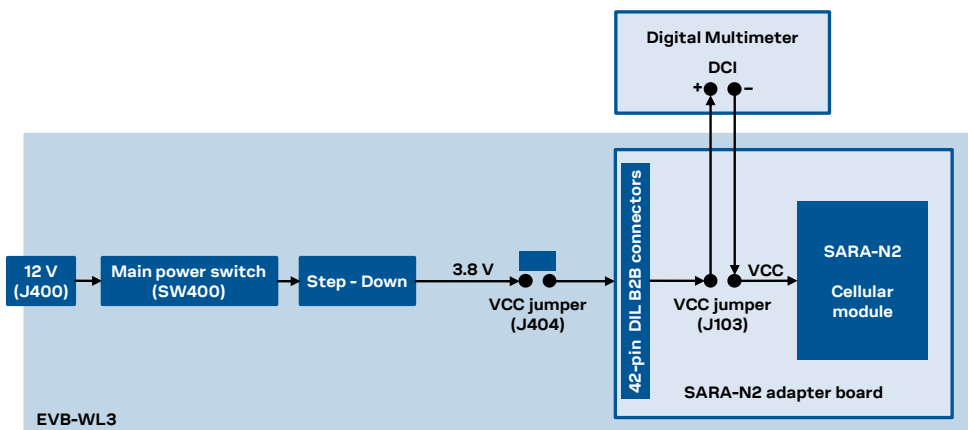

Figure 6: Block diagram of current consumption setup for SARA-N2

Alternatively, a suitable external DC power supply with dynamic current measurement capabilities (as for example the Agilent 66319B/D) can be used for current consumption measurements, acting also as supply source for the SARA-N2 module mounted on the adapter board.

E Glossary

Abbreviation	Definition
ADP	Adapter Board
AT	AT Command Interpreter Software Subsystem, or attention
B2B	Board-to-Board Connector
CTS	Clear To Send
DDC	Display Data Channel
DIL	Dual-In-Line
EVB	Evaluation Board
GND	Ground
GNSS	Global Navigation Satellite System
GPIO	General Purpose Input Output
I2C	Inter-Integrated Circuit
LDO	Low Drop-Out
LED	Light Emitting Diode
LTE	Long Term Evolution
NB-IoT	Narrow Band Internet of Things
RF	Radio Frequency
RSVD	Reserved
RTS	Request To Send
RX	Receiver
SIM	Subscriber Identification Module
TX	Transmitter
UART	Universal Asynchronous Receiver-Transmitter
USB	Universal Serial Bus
