

SN74FB1653

17-BIT LVTTTL/BTL UNIVERSAL STORAGE TRANSCEIVER WITH BUFFERED CLOCK LINE

SCBS702H – AUGUST 1997 – REVISED MARCH 2004

description/ordering information

The SN74FB1653 contains an 8-bit and a 9-bit transceiver with a buffered clock. The clock and transceivers are designed to translate signals between LVTTTL and BTL environments. The device is designed specifically to be compatible with IEEE Std 1194.1-1991 (BTL).

The A port operates at LVTTTL signal levels. The A outputs reflect the inverse of the data at the \bar{B} port when the A-port output enable (OEA) is high. When OEA is low or when V_{CC} (5 V) typically is less than 2.5 V, the A outputs are in the high-impedance state.

The \bar{B} port operates at BTL signal levels. The open-collector \bar{B} ports are specified to sink 100 mA. Two output enables (OEB and \overline{OEB}) are provided for the \bar{B} outputs. When OEB is low, \overline{OEB} is high, or V_{CC} (5 V) typically is less than 2.5 V, the \bar{B} port is turned off.

The clock-select (2SEL1 and 2SEL2) inputs are used to configure the TTL-to-BTL clock paths and delays (refer to the *MUX-MODE DELAY* table).

BIAS V_{CC} establishes a voltage between 1.62 V and 2.1 V on the BTL outputs when V_{CC} (5 V) is not connected.

BG V_{CC} and BG GND are the supply inputs for the bias generator.

V_{REF} is an internally generated voltage source. It is recommended that V_{REF} be decoupled with an external 0.1- μ F capacitor.

Enhanced heat-dissipation techniques should be used when operating this device from A1 to A0 at frequencies greater than 50 MHz, or from A1 to \bar{B} or \bar{B} to A0 at frequencies greater than 100 MHz.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range: $V_{CC}(5\text{ V})$, BIAS V_{CC} , BG V_{CC}	–0.5 V to 7 V
$V_{CC}(3.3\text{ V})$	–0.5 V to 4.6 V
Input voltage range, V_I : Except \overline{B} port	–1.2 V to 7 V
\overline{B} port	–1.2 V to 3.5 V
Input clamp current, I_{IK} : Except \overline{B} port	–40 mA
\overline{B} port	–18 mA
Voltage range applied to any \overline{B} output in the disabled or power-off state	–0.5 V to 3.5 V
Voltage range applied to any output in the high state	–0.5 V to V_{CC}
Current applied to any single output in the low state: A port	48 mA
\overline{B} port	200 mA
Package thermal impedance, θ_{JA} (see Note 1)	22°C/W
Storage temperature range, T_{stg}	–65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The package thermal impedance is calculated in accordance with JESD 51-7.

recommended operating conditions (see Note 2)

		MIN	NOM	MAX	UNIT
V_{CC} , BG V_{CC} , BIAS V_{CC}	Supply voltage	4.5	5	5.5	V
$V_{CC}(3.3\text{ V})$	Supply voltage	3	3.3	3.6	V
V_{IH}	High-level input voltage	\overline{B} port	1.62	2.3	V
		Except \overline{B} port	2		
V_{IL}	Low-level input voltage	\overline{B} port	0.75	1.47	V
		Except \overline{B} port		0.8	
I_{IK}	Input clamp current			–18	mA
I_{OH}	High-level output current			–3	mA
I_{OL}	Low-level output current	AO port		24	mA
		\overline{B} port		100	
T_A	Operating free-air temperature	0		70	°C

NOTE 2: To ensure proper device operation, all unused inputs must be terminated as follows: A and control inputs to $V_{CC}(5\text{ V})$ or GND, and B inputs to GND only. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

17-BIT LVTTTL/BTL UNIVERSAL STORAGE TRANSCIEVER WITH BUFFERED CLOCK LINE

SCBS702H – AUGUST 1997 – REVISED MARCH 2004

PARAMETER MEASUREMENT INFORMATION

- NOTES: A. C_L includes probe and jig capacitance.
 B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
 C. All input pulses are supplied by generators having the following characteristics: TTL inputs: $PRR \leq 10$ MHz, $Z_O = 50 \Omega$, $t_r \leq 2.5$ ns, $t_f \leq 2.5$ ns; BTL inputs: $PRR \leq 10$ MHz, $Z_O = 50 \Omega$, $t_r \leq 1$ ns, $t_f \leq 1$ ns.
 D. The outputs are measured one at a time, with one transition per measurement.

Figure 1. Load Circuits and Voltage Waveforms

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN74FB1653PCA	ACTIVE	HLQFP	PCA	100	90	RoHS & Green	NIPDAU	Level-3-260C-168 HR	0 to 70	FB1653	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL INFORMATION

This PowerPAD™ package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. This design optimizes the heat transfer from the integrated circuit (IC).

For additional information on the PowerPAD package and how to take advantage of its heat dissipating abilities, refer to Technical Brief, PowerPAD Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 and Application Brief, PowerPAD Made Easy, Texas Instruments Literature No. SLMA004. Both documents are available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

NOTE: All linear dimensions are in millimeters

Exposed Thermal Pad Dimensions
