### 600V CoolMOS™ G7 SJ Power Device

The C7 GOLD series (G7) for the first time brings together the benefits of the C7 GOLD CoolMOS™ technology, 4 pin Kelvin Source capability and the improved thermal properties of the TOLL package to enable a possible SMD solution for high current topologies such as PFC up to 3kW

#### Features

- C7 Gold gives best in class FOM  $R_{DS(on)} * E_{oss}$  and  $R_{DS(on)} * Q_g$ .
- Suitable for hard and soft switching (PFC and high performance LLC)
- C7 Gold technology enables best in class  $R_{DS(on)}$  in smallest footprint.
- TOLL package has inbuilt 4<sup>th</sup> pin Kelvin Source configuration and low parasitic source inductance (~1nH).
- TOLL package is MSL1 compliant, total Pb-free and has easy visual inspection grooved leads.
- TOLL SMD package combined with lead free die attach process enables improved thermal performance  $R_{th}$ .

#### Benefits

- C7 Gold FOM  $R_{DS(on)} * Q_g$  is 15% better than previous C7 600V enabling faster switching leading to higher efficiency.
- Increased economies of scale by use in PFC and PWM topologies in the application
- C7 Gold can reach 28mΩ in in TOLL 115mm<sup>2</sup> footprint, whereas previous BIC C7 600V was 40mΩ in 150mm<sup>2</sup> D<sup>2</sup>PAK footprint.
- Reducing parasitic source inductance by Kelvin Source improves efficiency by faster switching and ease of use due to less ringing.
- TOLL package is easy to use and has the highest quality standards.
- Improved thermals enable SMD TOLL package to be used in higher current designs than has been previously possible.

#### Potential applications

PFC stages and PWM stages (TTF, LLC) for high power/performance SMPS e.g. Computing, Server, Telecom, UPS and Solar.

#### Product validation

Fully qualified according to JEDEC for Industrial Applications

*Please note: For MOSFET paralleling the use of ferrite beads on the gate or separate totem poles is generally recommended.*
