VEES	VEE Substrate
VCCA	Vcco for ECL Outputs

The SY100S363 is a dual 8-input multiplexer designed for use in new, high-performance ECL systems. The three Data Select inputs (So, S1, S2) determine the bits from each of the inputs (An, Bn) that will be passed on through the two outputs. The same bit will be selected from the two groups of 8 inputs. The inputs on this device have  $75k\Omega$  pull-down resistors.
