Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

THERMAL RESISTANCE MAXIMUM RATINGS (Note 1)

Parameter	Symbol	Value	Unit
Junction-to-Case - Steady State (Note 3)	R_{\thetaJC}	3.0	°C/W
Junction-to-Ambient - Steady State (Note 3)	R_{\thetaJA}	47.7	

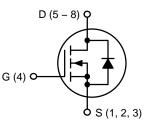

1. The entire application environment impacts the thermal resistance values shown, they are not constants and are only valid for the particular conditions noted.

 Psi (Ψ) is used as required per JESD51–12 for packages in which substantially less than 100% of the heat flows to single case surface.
 Surface-mounted on FR4 board using a 650 mm², 2 oz. Cu pad.

Sonace-modified on the board using a coordination, 2 or curpation.
 Continuous DC current rating. Maximum current for pulses as long as 1 second is higher but is dependent on pulse duration and duty cycle.
