---

Topic	Page
1.1 Connecting TMDSCSK388 Module to CSK Carrier Card .....	8

The DM388 CSK is based on DaVinci™ technology. These digital-media processors are highly integrated, cost-effective, low-power, and have programmable platforms that leverage TI's DaVinci processor technology to meet the processing requirements of HD video conferencing, Skype™ endpoints, IP netcam, digital signage, media players and adapters, mobile medical imaging, network projectors, home audio and video equipment, and similar devices in SD, HD, and 4K × 2K resolutions.

The DM388 camera starter kit is a development platform with the DM388 processor module connected to a CSK carrier card over board-to-board connectors. Features of the DM388 module and CSK carrier card are detailed in the subsections that follow.

DM388 camera starter kit contents:

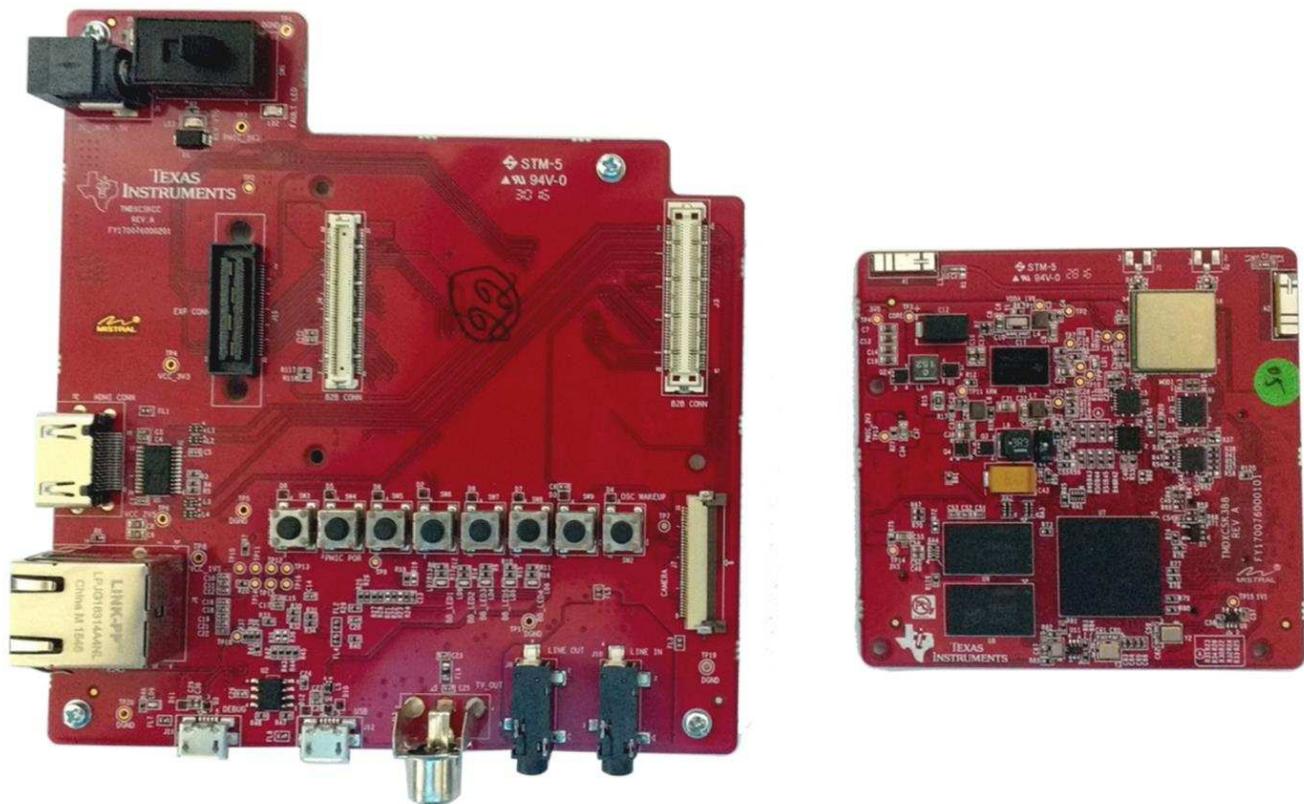

- TMDSCSK388 module
- CSK carrier card
- Camera module (LI-CAM-AR0331-324-1.8) with FPC cable

### 1.1 Connecting TMDSCSK388 Module to CSK Carrier Card

Use the following instructions to connect the TMDSCSK388 module to the CSK carrier card.

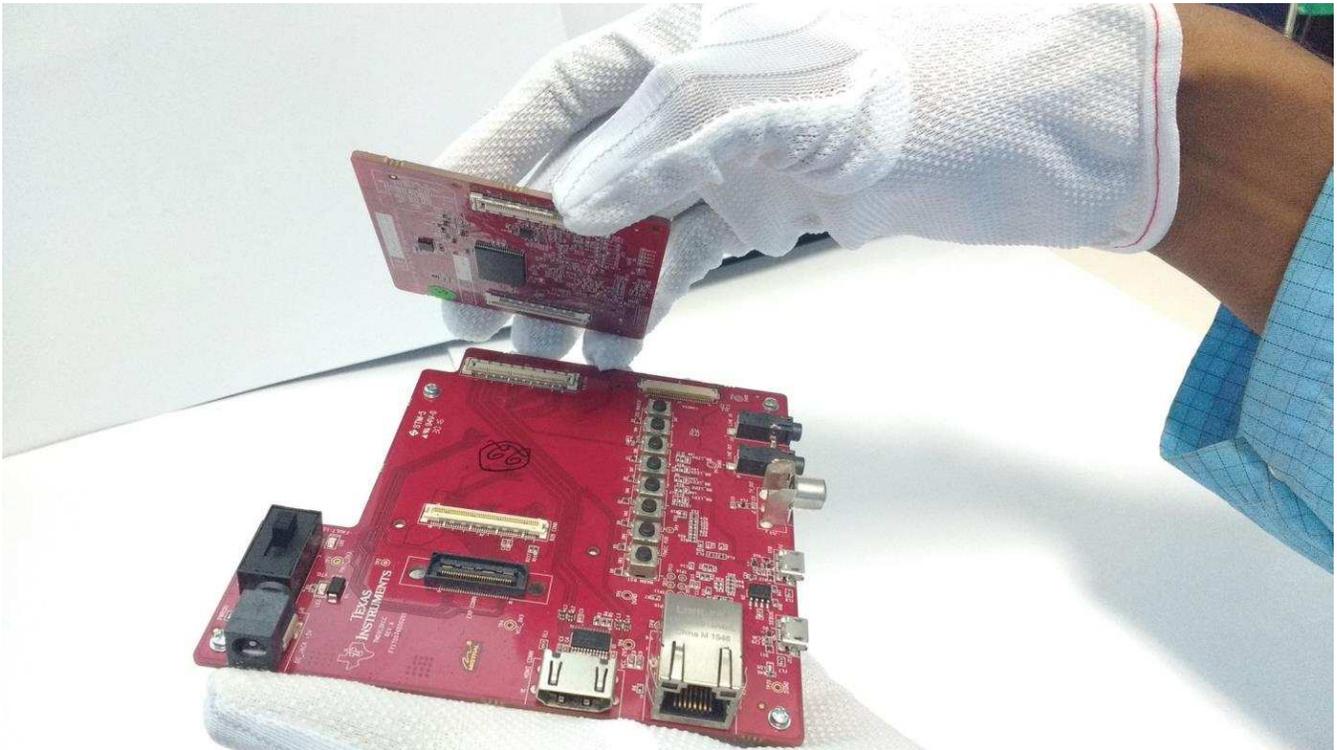

1. Align the CSK carrier card and the DM388 module (see [Figure 1-1](#)).

**Figure 1-1. Aligned DM388 and CSK Carrier Card**

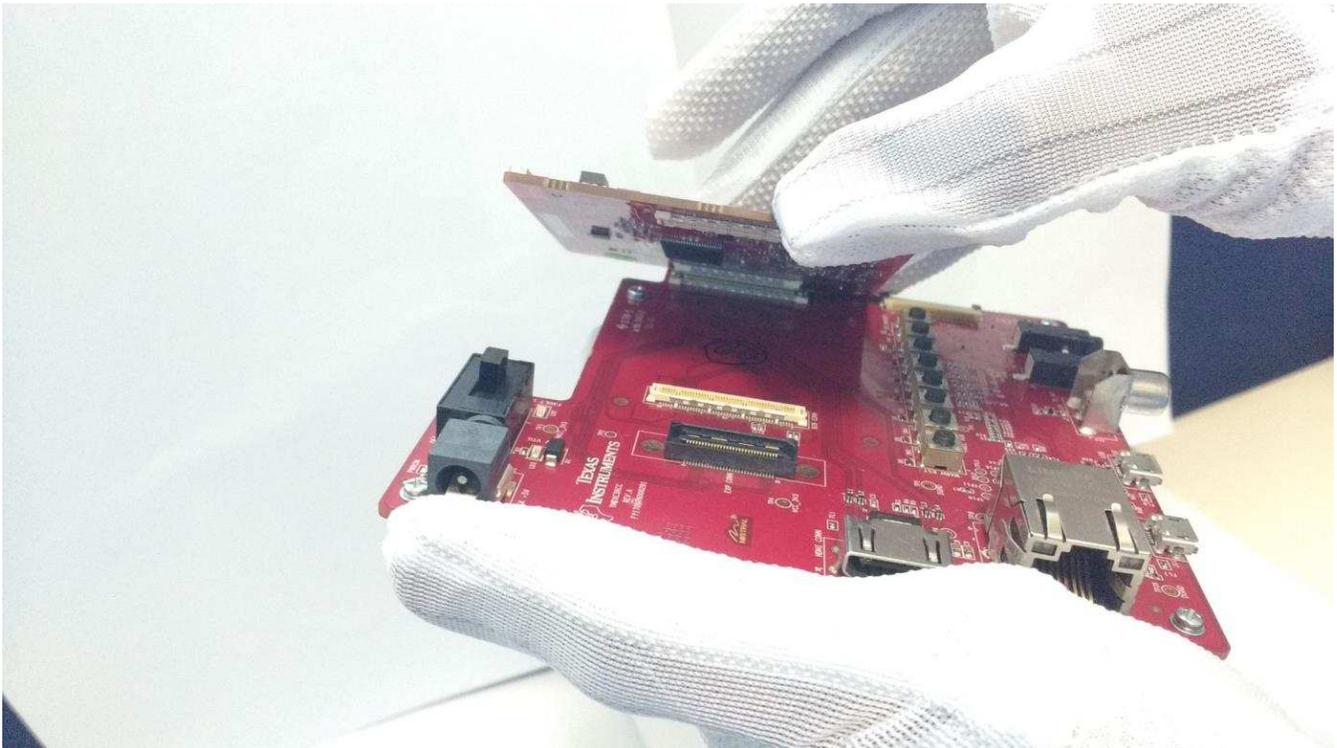

2. Place the DM388 module over the board-to-board connectors of the CSK carrier card, then gently press the devices together (see [Figure 1-2](#) and [Figure 1-3](#)).

**Figure 1-2. DM388 Module Above CSK Carrier Card**

**Figure 1-3. Connecting DM388 and CSK Carrier Card**

<b>2.1 Key Features</b> .....	<b>12</b>
<b>2.2 Block Diagram</b> .....	<b>14</b>
<b>2.3 Power Supply</b> .....	<b>16</b>

## 2.1 Key Features

The DM388 module is a high-performance DaVinci™ digital-media signal processor from TI.

- Up to 1000-MHz ARM® Cortex®-A8 RISC processor DSP internal memories
- Imaging subsystem
- Programmable high-definition video image coprocessing (HDVICP v2) engine
- HD video processing subsystem (HDVPSS)
- 32-bit DDR2, DDR3, and DDR3L SDRAM interface
  - Supports up to 400 MHz for DDR2, 533 MHz for DDR3, and 533 MHz for DDR3L
  - Up to two × 16 devices, 2GB of total address space
- Dynamic Memory Manager (DMM)
- General-Purpose Memory Controller (GPMC)
  - 8- or 16-bit multiplexed address and data bus
  - 512MB of total address space divided among up to eight chip selects
- Enhanced direct memory access (EDMA) controller
- Ethernet switch with dual 10-, 100-, or 1000-Mbps external interfaces (EMAC software)
- Dual USB 2.0 ports with integrated PHYs
- One PCI Express 2.0 port with integrated PHY
- Eight 32-bit general-purpose timers
- Four serial peripheral interfaces (SPIs), up to 48 MHz
- Three MMCs, SDs, and SDIO serial interfaces (up to 48 MHz)
- Four inter-integrated circuit (I<sup>2</sup>C bus) ports
- Two multichannel audio serial ports (McASP)
- Four audio tracking logic (ATL) modules
- On-chip ARM ROM bootloader (RBL)
- Power, reset, and clock management
- 32KB of embedded trace buffer (ETB) and 5-pin trace interface for debug
- 1.8- and 3.3-V dual voltage buffers for general I/O

The DM388 processor module is a low cost, small form factor, higher performance, easy-to-use system-on-module. The development platform has the interfaces that can help build application devices:

- Camera
- Ethernet
- HDMI
- CSI
- McASP
- UART
- I<sup>2</sup>C
- TVOUT
- USB

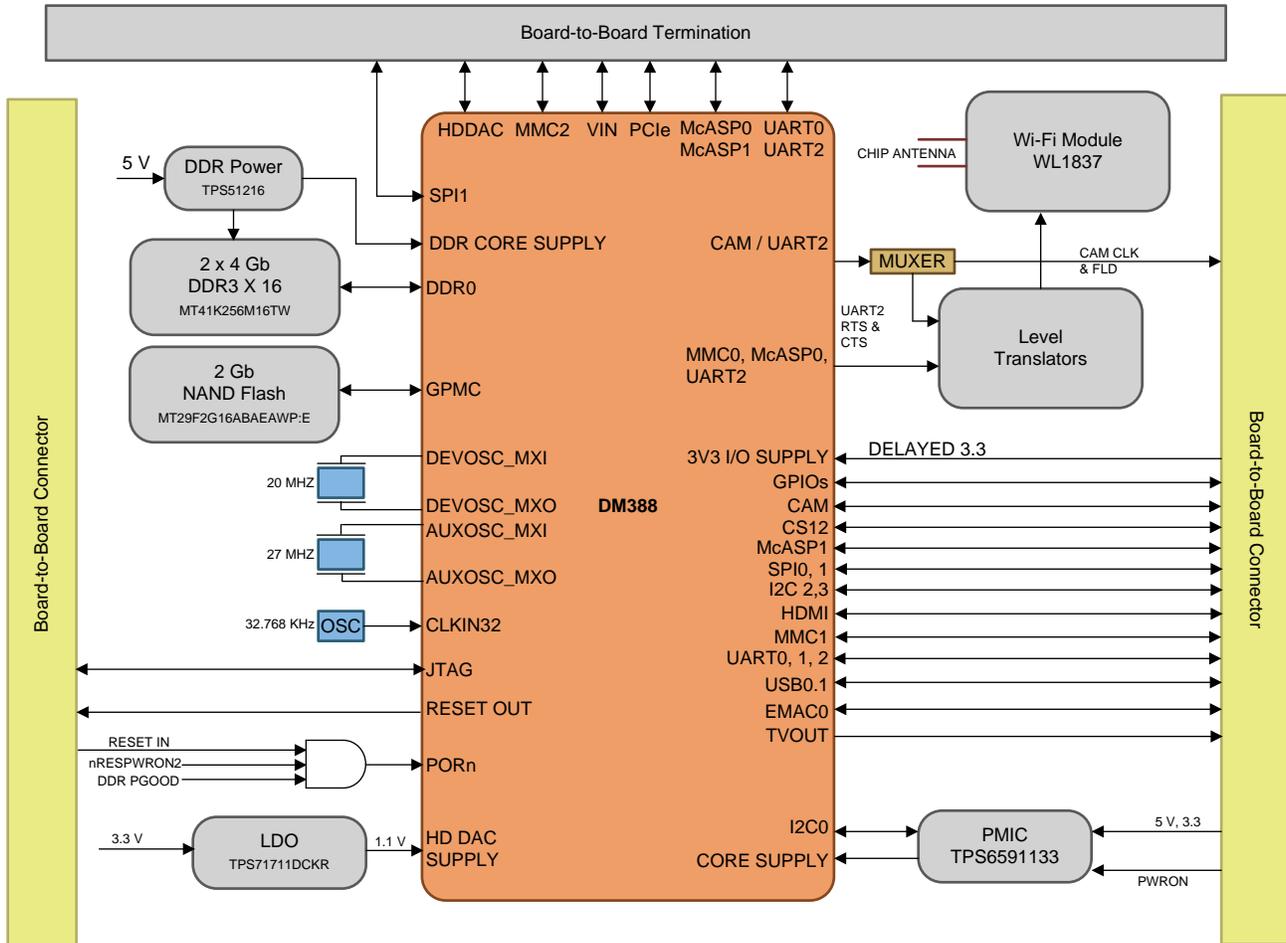

The following is a list of key features of the DM388 processor module.

- TI's DM388 high performance DaVinci digital media signal processor based on ARM v7 architecture
- WiLink 8 Wi-Fi module with 2.4-GHz, single-ended PCB antenna
- 2Gb NAND flash
- 1GB DDR3
- TI's TPS6591133 for power management
- Two board-to-board connectors support:
  - USB
  - UART
  - MMC
  - McASP
  - TVOUT
  - CAMERA
  - CSI
  - HDMI
  - GMII
  - JTAG
  - 10 GPIOs
- Options for UFL connectors (not mounted)
- Additional signals are terminated on board to DNI connector for future expansion
- Powered by carrier card through board-to-board connector

## 2.2 Block Diagram

Figure 2-1 shows the TMDSCSK388 block diagram.

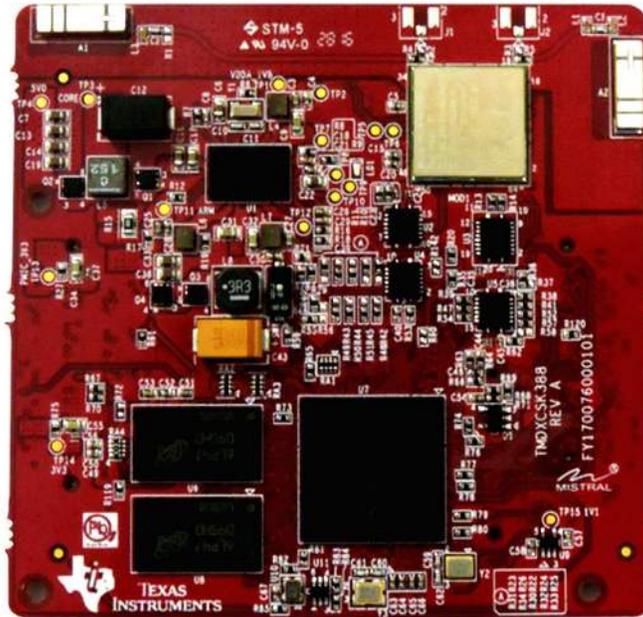

Figure 2-1. TMDSCSK388 Block Diagram

Figure 2-2 and Figure 2-3 show the top view and bottom view of the TMDSCSK388 module, respectively.

**Figure 2-2. TMDSCSK388 Top View**

**Figure 2-3. TMDSCSK388 Bottom View**

## 2.3 Power Supply

The DM388 processor is powered by the CSK carrier through the board-to-board connectors.

The CSK carrier card is powered by a +5-V, 3-A, DC power adapter plugged in to the DC power jack (J1). On the CSK carrier card, +5-V is converted into the required supply voltages by using regulators.

Table 2-1 lists the power ICs in the TMDSCSK388 module.

**Table 2-1. DM388 Power ICs**

Power IC	Purpose
TPS6591133 (U11)	All voltages for the processor
TPS51216RUKR (U14)	1V5 and 0.75 generation for DDR3
TPS71711DCKR (U9)	1V1 generation for HD-DAC

The power management IC TPS6591133 (U1) generates and sequences the following powers to the DM388 processor:

- Core voltage
  - CORE\_CVDD
  - CVDD\_HDVICP
  - CVDD\_ARM
- Internal LDO voltages
  - TPS\_VDAC\_1V8
  - TPS\_HDMI\_CSI\_1V8
  - TPS\_GPIO\_3V3
  - PLL\_1V8
  - TPS\_LDO5\_3V3
  - TPS\_LDO6\_3V3
  - TPS\_USB\_3V3
  - TPS\_USB\_1V8
- I/O voltages
  - TPS\_VDDA\_1V8
- VRTC voltages
  - VRTC

The I2C0 interface if the DM388 module controls the TPS6591133 device.

## TMDSCSK388 Module Interface Details

3.11 GPIO Mapping .....	27

### 3.1 Clock Distribution

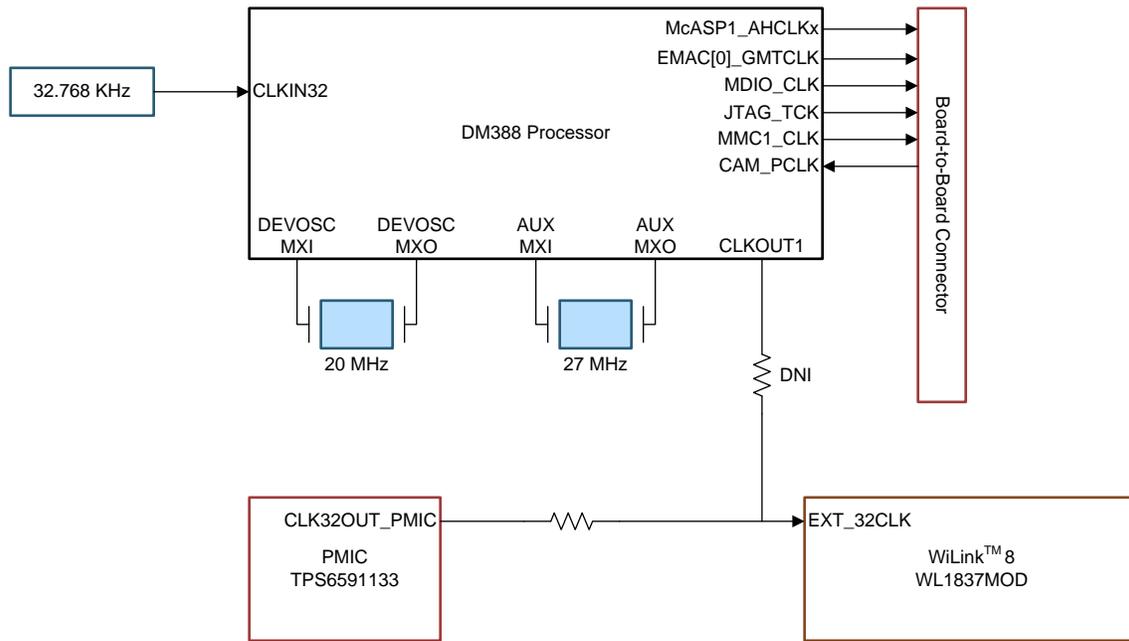

The DM388 module contains the following reference clocks:

- Y1 – 32.768-kHz real-time clock (RTC) to the power management IC (TPS6591133)
- Y2 – 20-MHz crystal for the device oscillator inputs
- Y3 – 27-MHz crystal for the auxiliary oscillator inputs
- U5 – 32.768-KHz oscillator for the reference clock

The slow clock to the WLAN WiLink WL1837 module is provided by CLKOUT1 from the processor or by CLK32OUT from the PMIC. The default clock is from PMIC.

Figure 3-1 shows the board-clock distribution circuit.

**Figure 3-1. Clock Distribution**

Copyright © 2016, Texas Instruments Incorporated

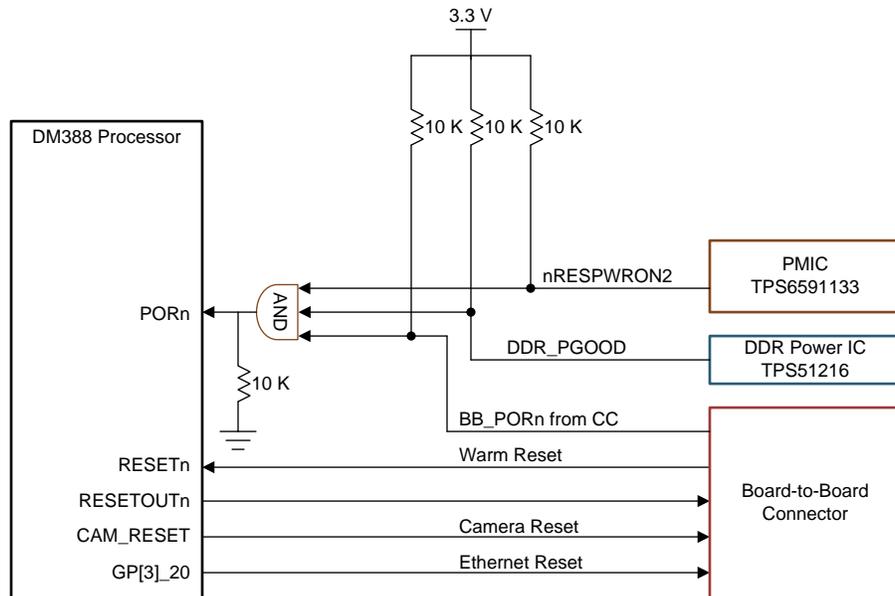

### 3.2 Reset Circuit and Distribution

Power good from PMIC TPS6591133 (nRESPWRO2), power good from DDR power IC (DDR\_PG00D), and reset from the CSK carrier card are monitored to generate the power-on reset (PORn) to the DM388 processor. A 3-input AND gate is used to implement the reset logic. Warm reset for the processor is the input from the CSK carrier card through the board-to-board connector.

The reset to the parallel camera module and the externally connected Ethernet are reset from the DM388 processor through the board-to-board connectors.

Figure 3-2 shows the board-reset circuit and distribution.

Figure 3-2. Reset Circuit and Distribution

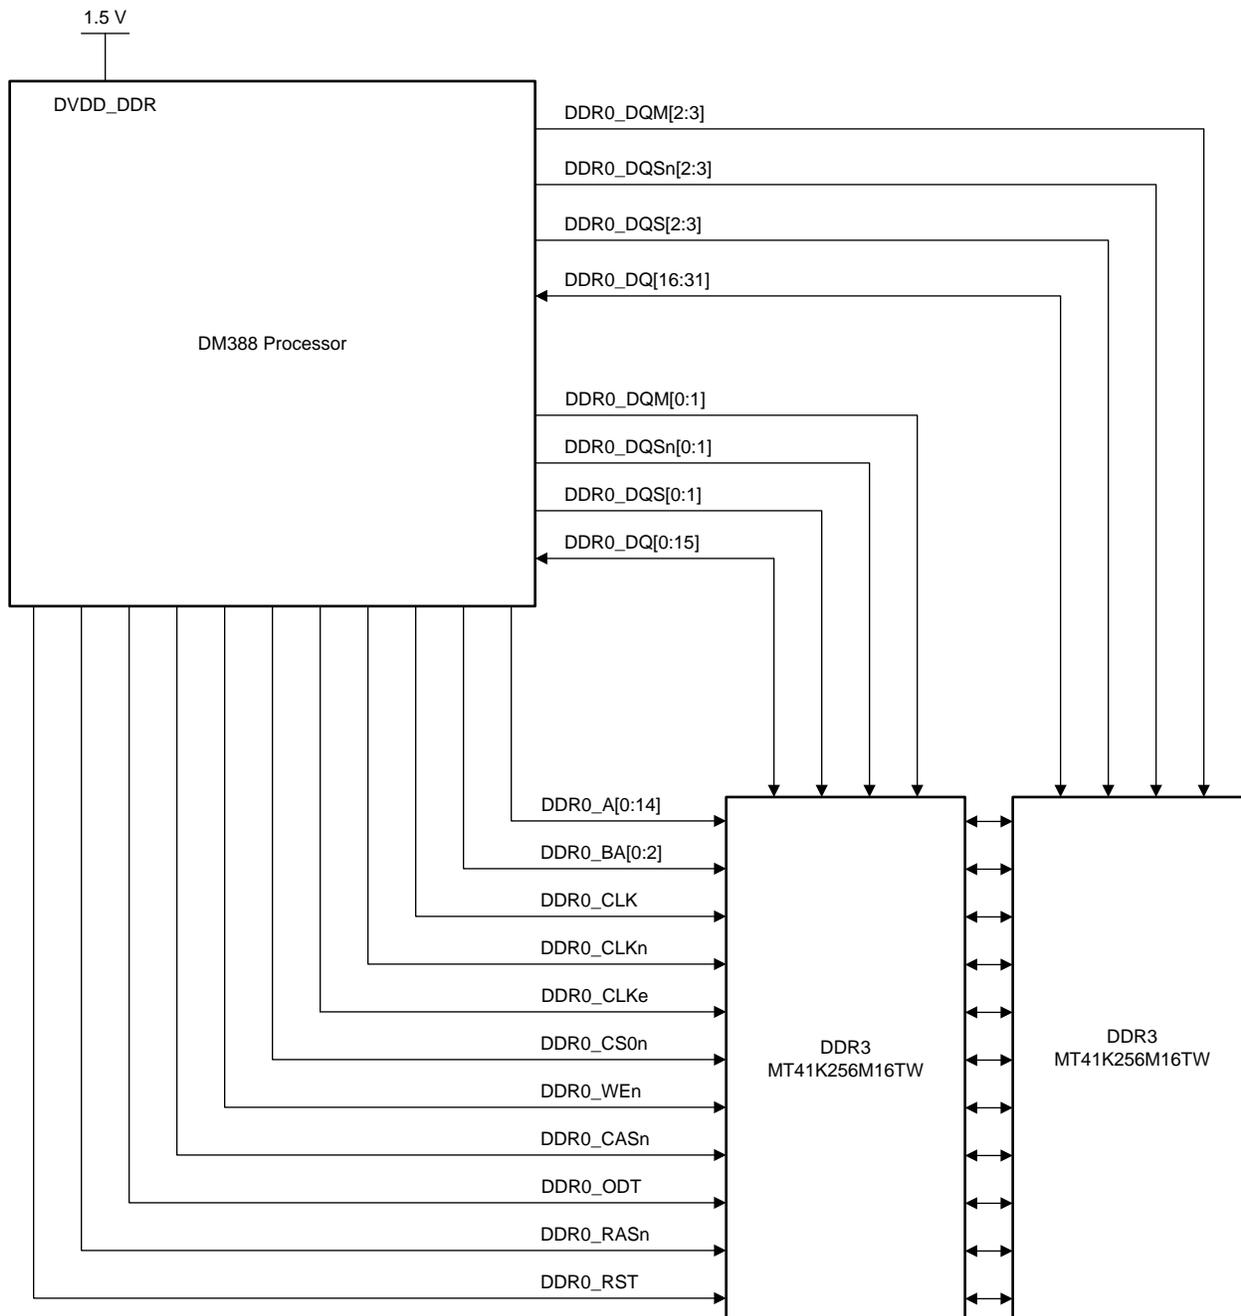

Copyright © 2016, Texas Instruments Incorporated

### 3.3 DDR3 Interface

The DM388 processor supports 32-bit data DDR2, DDR3, DDR3L, and SDRAM interfaces. The two 4-Gb (256M x16) DDR3L chips (MT41K256M16TW-107 [backward compatible to DDR3]) from Micron are used to obtain a memory size of 1 GB. The DDR3L chips are routed using Fly-by topology, shown in [Figure 3-3](#).

Figure 3-3. DDR3 Bank0 Interface

### 3.4 DDR Timing Control and Software Leveling

Table 3-1 provides the calculated seed values. For more information about DDR3 leveling, refer to [TI814x-DDR3-Init-U-Boot](#).

**Table 3-1. Calculated Seed Values**

Parameters				
DDR3 clock frequency	533 MHz			
Invert Clkout	0			
Trace Length (inches)				
	Byte 0	Byte 1	Byte 2	Byte 3
CK trace	1.8241295	1.8241295	1.3182095	1.3182095
DQS trace	0.7416985	0.5462986	0.9314172	0.6275384
Seed Values (per byte lane)				
WR DQS	1A	1F	9	10

### 3.5 NAND Flash Interface

The DM388 processor supports a 2-Gb NANDFLASH MT29F2G16ABA from Micron, with a 16-bit data width interfaced to the general purpose memory controller (GPMC) interface of the processor. The NAND flash is interfaced to GPMC chip select #0.

Figure 3-4 shows the connection details of the NAND flash in the TMDSCSK388 module. The operating voltage of the GPMC interface and NAND flash is 3.3 V.

**Figure 3-4. NAND Flash Interface**

Copyright © 2016, Texas Instruments Incorporated

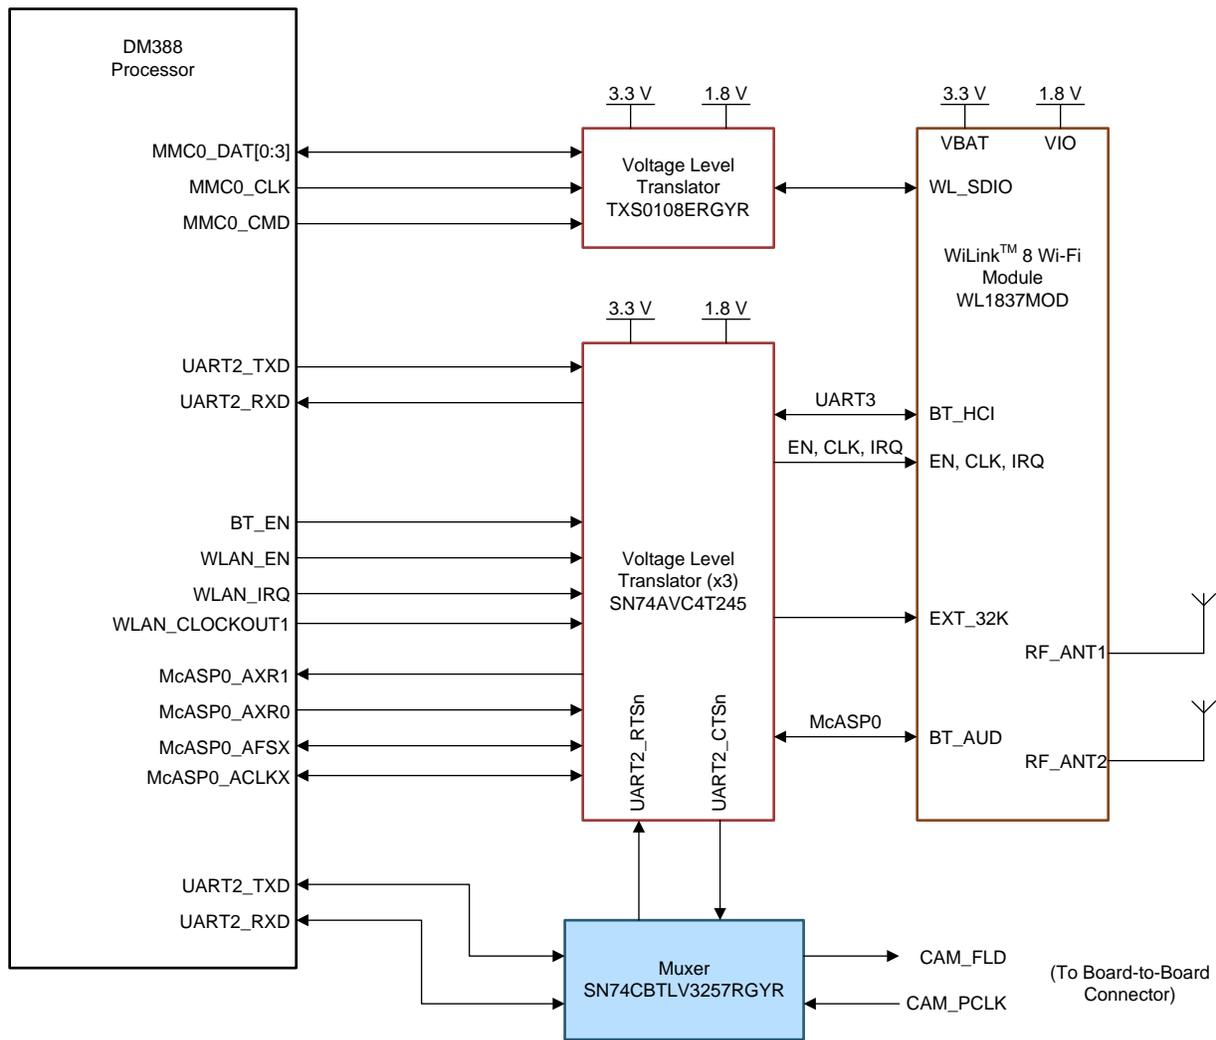

### 3.6 Wi-Fi and BT Interface

The WiLink 8 module is a WLAN baseband processor and RF transceiver support of IEEE standard 802.11a, 802.11b, 802.11g, and 802.11n. The device can be configured for 20-MHz or 40-MHz SISO, and 20-MHz 2 × 2 MIMO at 2.4 GHz for high throughput (80 Mbps [TCP] and 100 Mbps [UDP]). The device supports a 4-bit SDIO host interface.

Flow controls signals of UART2 (RTSn and CTSn) are muxed with the camera field and pixel-clock signals; a multiplexer, U4 (SN74CVTLV3257RGYR), is used to separate those signals. UART signals are fed to the voltage translators, and CAM signals are connected to board-to-board connectors. Four voltage level translators (TXS0108ERHYR [U3] for MMC, SN74AVC4T245[U2, U5, U12] for McASP, UART, EN, CLK, and IRQ) convert I/O voltages of the DM388 (3.3 V) to I/O voltages of the Wi-Fi module (1.8 V).

Figure 3-5 shows the Wi-Fi and BT interface.

Figure 3-5. Wi-Fi and BT Interface

Copyright © 2016, Texas Instruments Incorporated

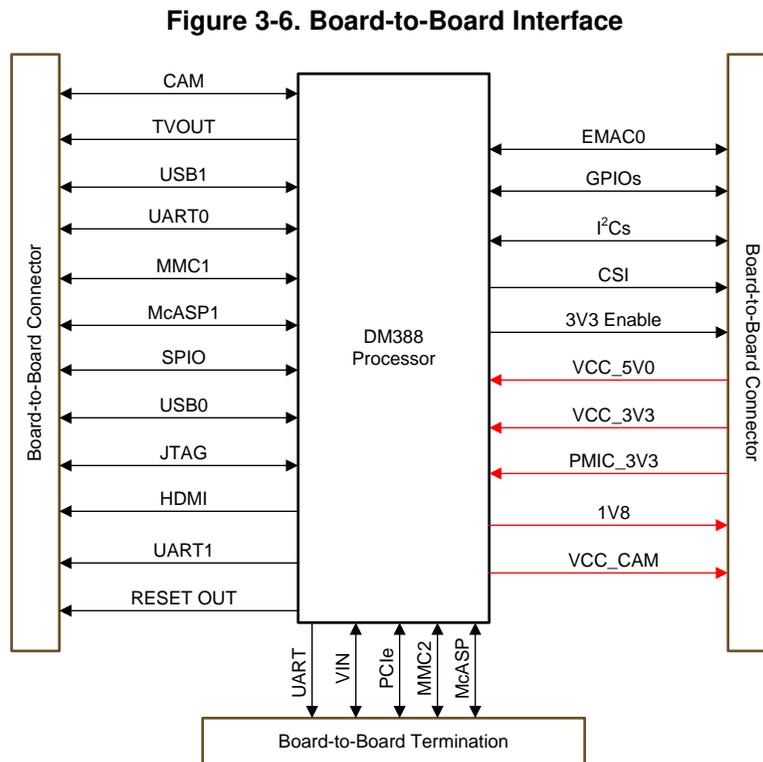

### 3.7 Board-to-Board Interface

The DM388 processor module supports parallel camera interface, TVOUT, EMAC, McASP, MMC, USB, UART, SPI, JTAG, I<sup>2</sup>C, HDMI, CSI, and GPIO's over board-to-board connectors. See [Chapter 6](#) for more information about the board-to-board interfaces.

A board-to-board termination connector is provided in the DM388 SOM module, and supports video IN, PCIe, MMC, McASP, and HDDAC.

By default, the board-to-board connector is not assembled on the DM388 SOM module. The connector can be populated and used with a third-party carrier card.

[Figure 3-6](#) shows the board-to-board interface.

Copyright © 2016, Texas Instruments Incorporated

### 3.8 Boot Mode Configuration

The DM388 module supports MMC and NAND boot mode configurations. By Default, switch SW1 is configured for NAND flash boot mode. However, other boot modes must be selected by the resistor mount and demount option.

Figure 3-7 shows the boot mode configurations.

Figure 3-7. Boot Mode Configurations

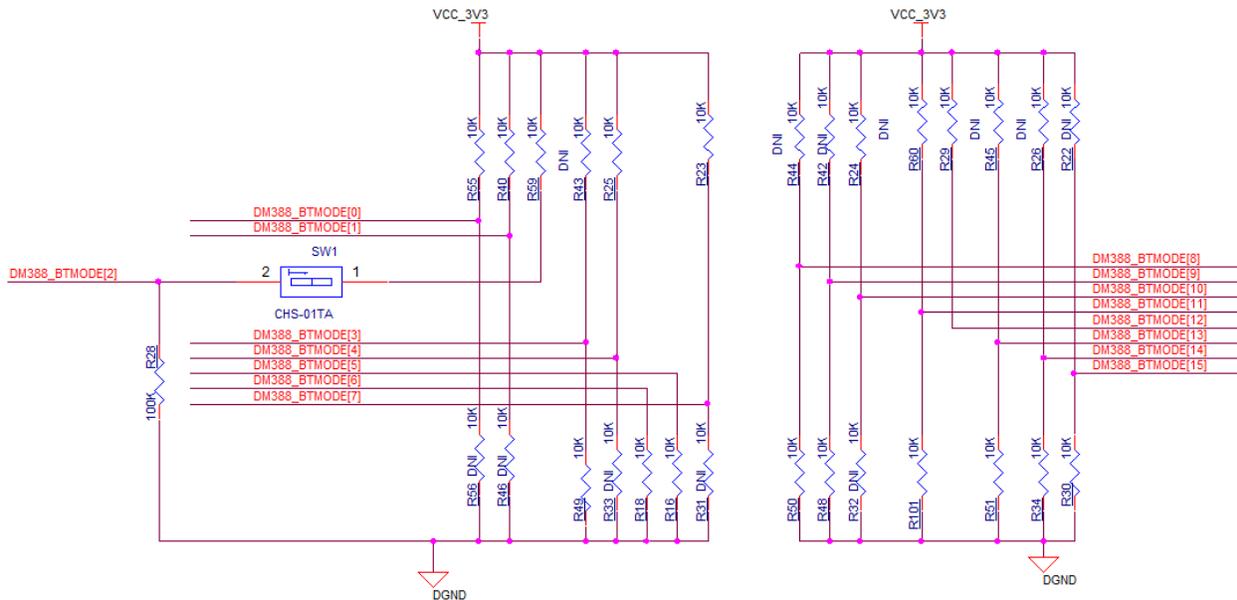

Table 3-2 provides the boot mode selection and information.

Table 3-2. Boot Mode Selection

Boot Mode Pin	Default Setting	Description
BTMODE15	0	GPMC CS0 wait disabled
BTMODE14	0	GPMC CS0 address and data not muxed
BTMODE13	0	GPMC CS0 16-bit data bus
BTMODE12	1	GPMC CS0 16-bit data bus
BTMODE11	0	RSTOUT is asserted when a watchdog timer reset, POR, RESET, emulation, software-global cold reset, or software-global warm reset occurs
BTMODE10	0	GPMC option A
BTMODE9	0	MII (GMII) ethernet PHY mode
BTMODE8	0	MII (GMII) ethernet PHY mode
BTMODE7	1	RGMII internal delay disabled
BTMODE6	0	RSV
BTMODE5	0	RSV
BTMODE[4:0]	10011	NAND boot
	10111	MMC boot

Table 3-3 provides the SW1 switch-selection information.

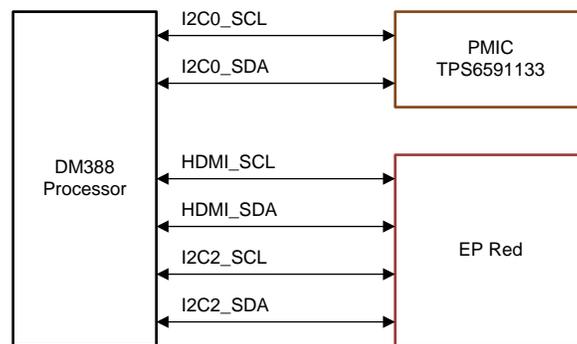

**Table 3-3. SW1 Switch Selection**

SW1	Selection
ON	MMC boot
OFF	NAND

### 3.9 I<sup>2</sup>C Interface

The DM388 processor module supports an I<sup>2</sup>C interface that is connected to PMIC and the board-to-board connector. Refer to Section 3.10 for I<sup>2</sup>C addresses of individual devices. Figure 3-8 shows the I<sup>2</sup>C connection on the TMDSCSK388 module.

**Figure 3-8. I<sup>2</sup>C Interface**

Copyright © 2016, Texas Instruments Incorporated

### 3.10 I<sup>2</sup>C Address Mapping

Table 3-4 provides the address mapping for I<sup>2</sup>C interfaces on the TMDSCSK388 module.

**Table 3-4. I<sup>2</sup>C Address Mapping**

Master	I <sup>2</sup> C	Slave Device	7-Bit Address
DM388 Processor	I2C0	PMIC	0x2D (general purpose)
	HDMI SCL HDMI SDA	Display device	Depends on connected HDMI monitor
		Board-to-board connector → audio codec (TLV320AIC3104)	0x18
	I2C2	Board-to-board connector → level translator → camera module	0x10 (camera sensor)
0x2D (LVDS module)			

### 3.11 GPIO Mapping

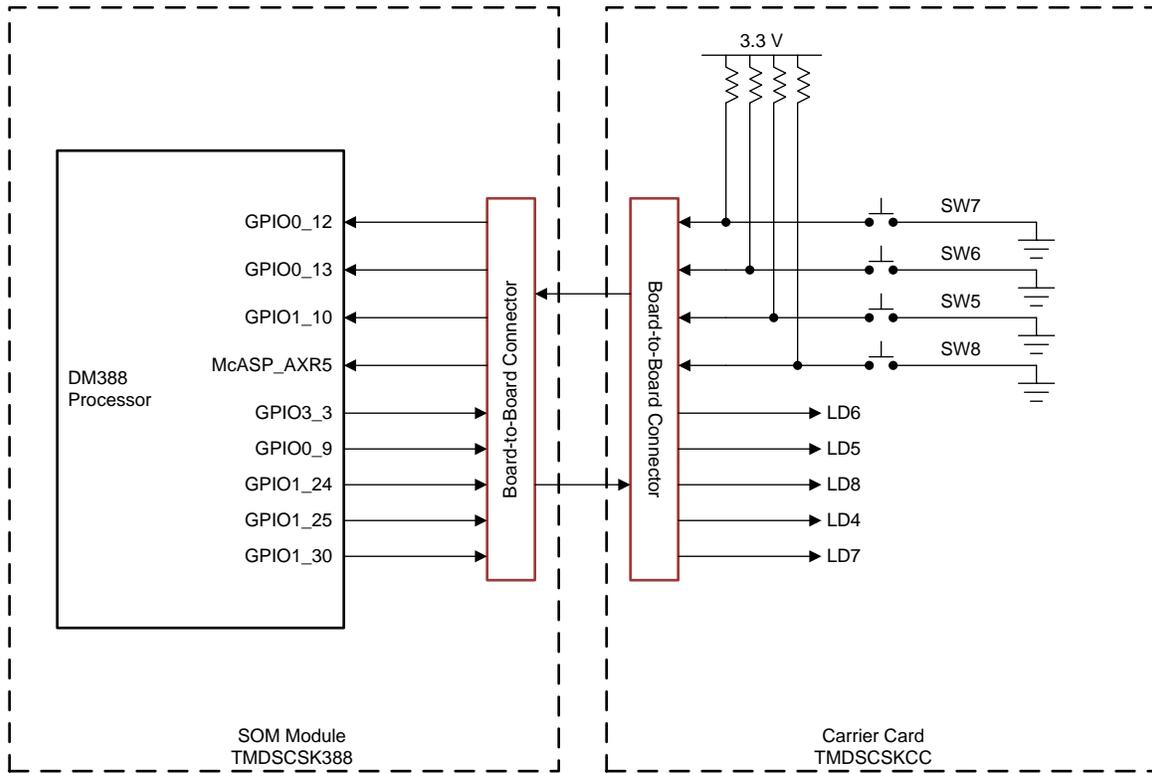

Table 3-5 provides the GPIO mapping for the TMDSCSK388 module.

**Table 3-5. GPIO Mapping**

GPIO Name	DM388 GPIO	Purpose	Internal or External PU or PD
DM388_GPMC_WPn	GP1[26]	Write protect to NAND flash	External PU
DM388_WLAN_IRQ	GP1[13]	Interrupt from WL1837 MOD	External PU
DM388_WLAN_EN	GP2[6]	WLAN enable signal to Wi-Fi module (WL1837)	Internal PD
DM388_BT_EN	GP2[5]	Bluetooth enable signal to Wi-Fi module (WL1837)	Internal PD
DM388_TPS_SLEEP	GP1[15]	PMIC sleep input	Internal PU
DM388_MUX_SEL	GP[16]	Selection signal to camera and UART muxer	External PD
ENET_RSTn	GP3[20]	Ethernet reset	Internal PU
DM388_MMC1_DAT6 GP0_12	GP0[12]	Switch	Internal PU
DM388_MMC1_DAT7 GP0_13	GP0[13]	Switch	Internal PU
DM388_GP1[10]	GP1[10]	Switch	Internal PD
DM388_McASP0_AXR5	MCA[0_AXR[5]	Switch	Internal PD
DM388_GP3[3]	GP3[3]	LED	Internal PD

## 4.1 Board Layout

Figure 4-1 and Figure 4-2 show the top and bottom view of the TMDSCSK388 assembly layout. The DM388 board is 2.856 × 2.755 inches (72.55 mm × 70 mm), has eight layers, and is powered through the board-to-board connector.

**Figure 4-1. TMDSCSK388 Assembly Layout (Top View)**

**Figure 4-2. TMDSCSK388 Assembly Layout (Bottom View)**

## 4.2 Connector Index

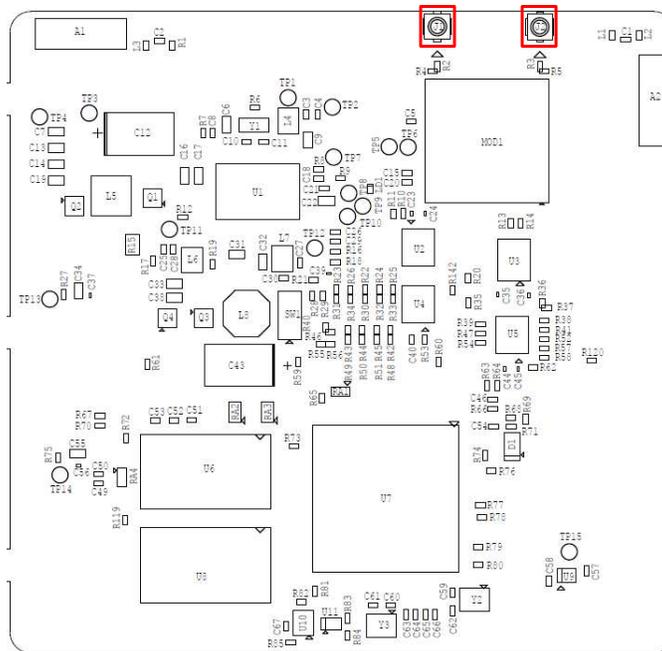

Table 4-1 provides the connectors that are on the TMDSCSK388 module.

**Table 4-1. TMDSCSK388 Module Connectors**

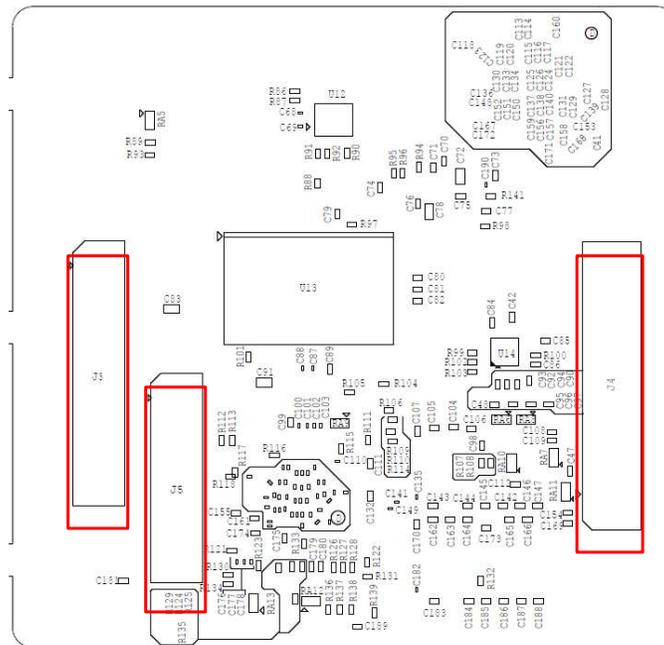

Connector	Part Number	Pins	Function
J1	U.FL-R-SMT-1(01)	3	RF UFL connector for high frequency signals (DNI)
J2			
J3	FX11LA-80P/8-SV(71)	80	Board-to-board connector (male)
J4	FX11LA-80S/8-SV(71)	80	Board-to-board connector (female)
J5	FX11LA-60P/6-SV(71)	60	Board-to-board termination (DNI)

Figure 4-3 and Figure 4-4 show the locations of the connectors on the TMDSCSK388 module.

**Figure 4-3. TMDSCSK388 Connectors (Top)**

**Figure 4-4. TMDSCSK388 Connectors (Bottom)**

**4.2.1 UFL Connector (J1 and J2)**

Table 4-2 provides the UFL connector information.

**Table 4-2. UFL Connector J1 and J2**

Number	Pin Description	Remarks
1	RF_ANT1	Signal
2	GND	Ground
3	GND	Ground

## 4.2.2 Board-to-Board Male Connector (J3)

Table 4-3 provides the board-to-board male connector information for J3.

### 4.3 Switches, Test Points, and LEDs

The TMDSCSK388 module has one switch for selecting boot mode. Users can select NAND boot or SD boot by turning switch SW1 to ON or OFF. [Table 4-6](#) provides the module switch information.

**Table 4-6. TMDSCSK388 Module Switch Information**

Switch Number	Description		
SW1	SWITCH1	ON	MMC BOOT
		OFF	NAND

[Table 4-7](#) provides the test points available on the DM388 module.

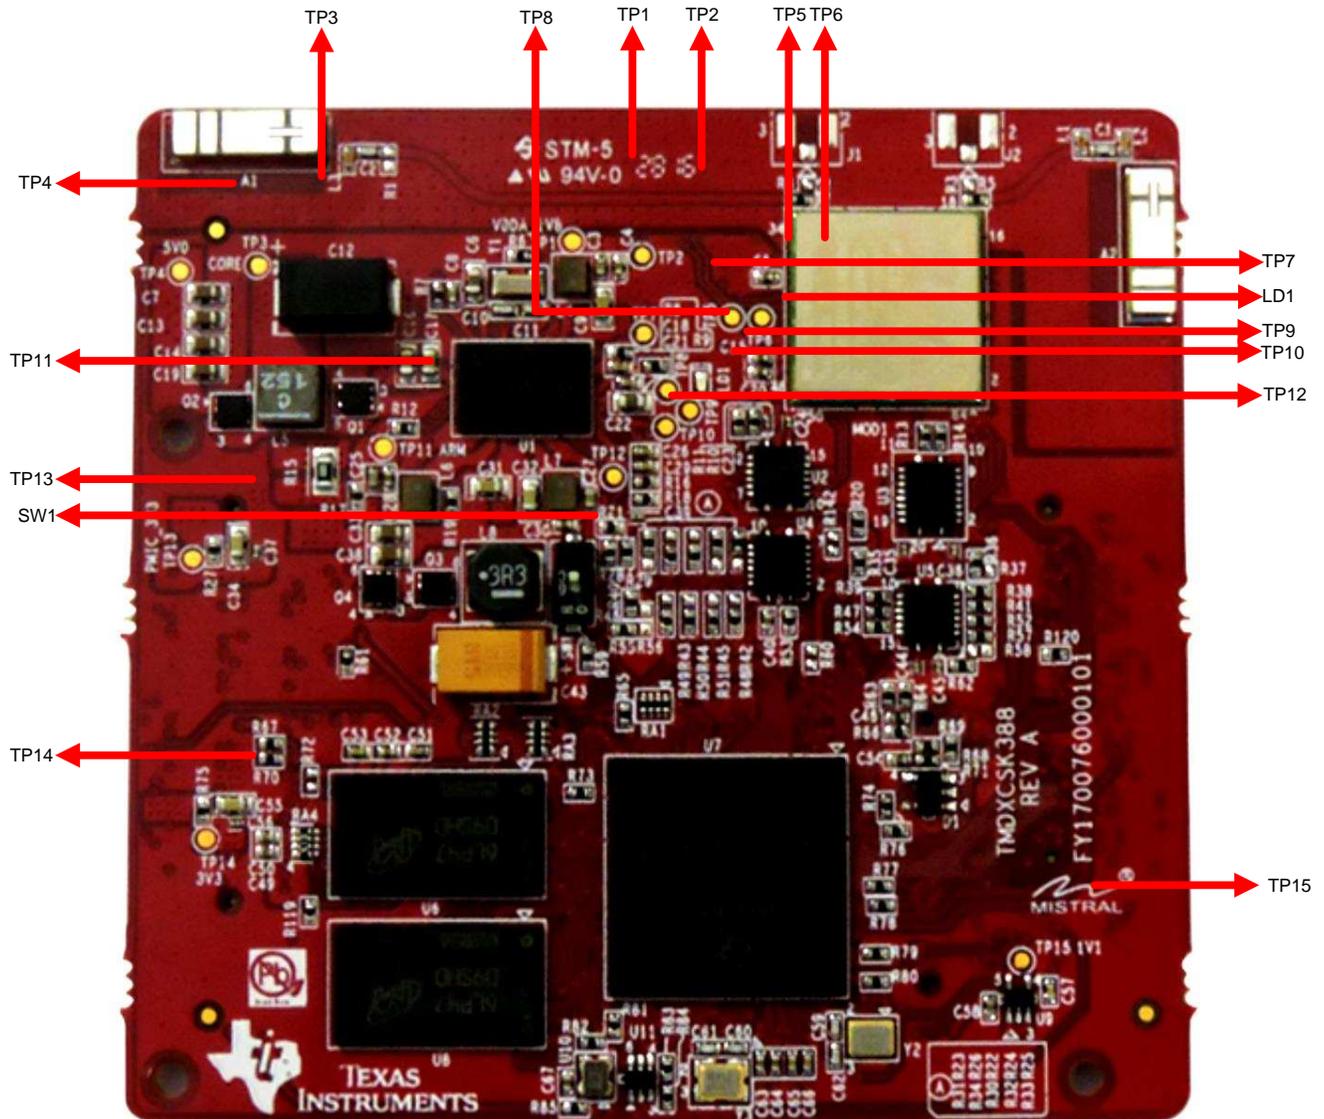

**Table 4-7. TMDSCSK388 Test Points**

Test Point	Signal
TP1	TPS_VDDA_1V8
TP2	HDRST
TP3	TPS_CORE_CVDD
TP4	VCC_5V0
TP5	BT_UART_DBG
TP6	WL_UART_DBG
TP7	TPS_VDAC_1V8
TP8	TPS_INT1
TP9	PWRHOLD
TP10	GPIO6
TP11	TPS_CVDD_ARM
TP12	GPIO2
TP13	PMIC_3V3
TP14	VCC_3V3
TP15	TPS_VHD_1V1

The TMDSCSK388 provides one green LED (LD1) for power indication. This LED provides the status of the 5-V power input from the CSK carrier card.

Figure 4-5 shows the position of the LED, test points, and switches on the board.

Figure 4-5. LED, Test Points, and Switches

## Overview of TMDSCSKCC

---

---

---

Topic	Page
6.1 Key Features .....	45
6.2 Block Diagram .....	46
6.3 Power Supply .....	49
6.4 Overvoltage Protection Circuit .....	50

## 6.1 Key Features

The camera starter-kit carrier card is a standalone development platform that enables users to exhibit the video processing capabilities of the TMS320DM388, TMS320DM8127, and TMS320DM369 processors and the peripherals. The CSK carrier-card interfaces to processor modules such as the TMDSCSK388, TMDSCSK8127, and TMDSCSK369. The key features of the CSK carrier card are:

- Board-to-board connectors for the DMX processor module
- Micro SD card slot
- Audio codec (TLV320AIC3104IRHBR)
- Micro USB connector
- 4 user keys and 5 LEDs
- 2 reset switches and 1 oscillator wake-up switch
- On-board XDS100 JTAG emulator
- FTDI chip FT2232HL for JTAG and UART through a micro USB connector
- Audio line-in (MIC) and headphone out
- Powered through a 5-V DC jack

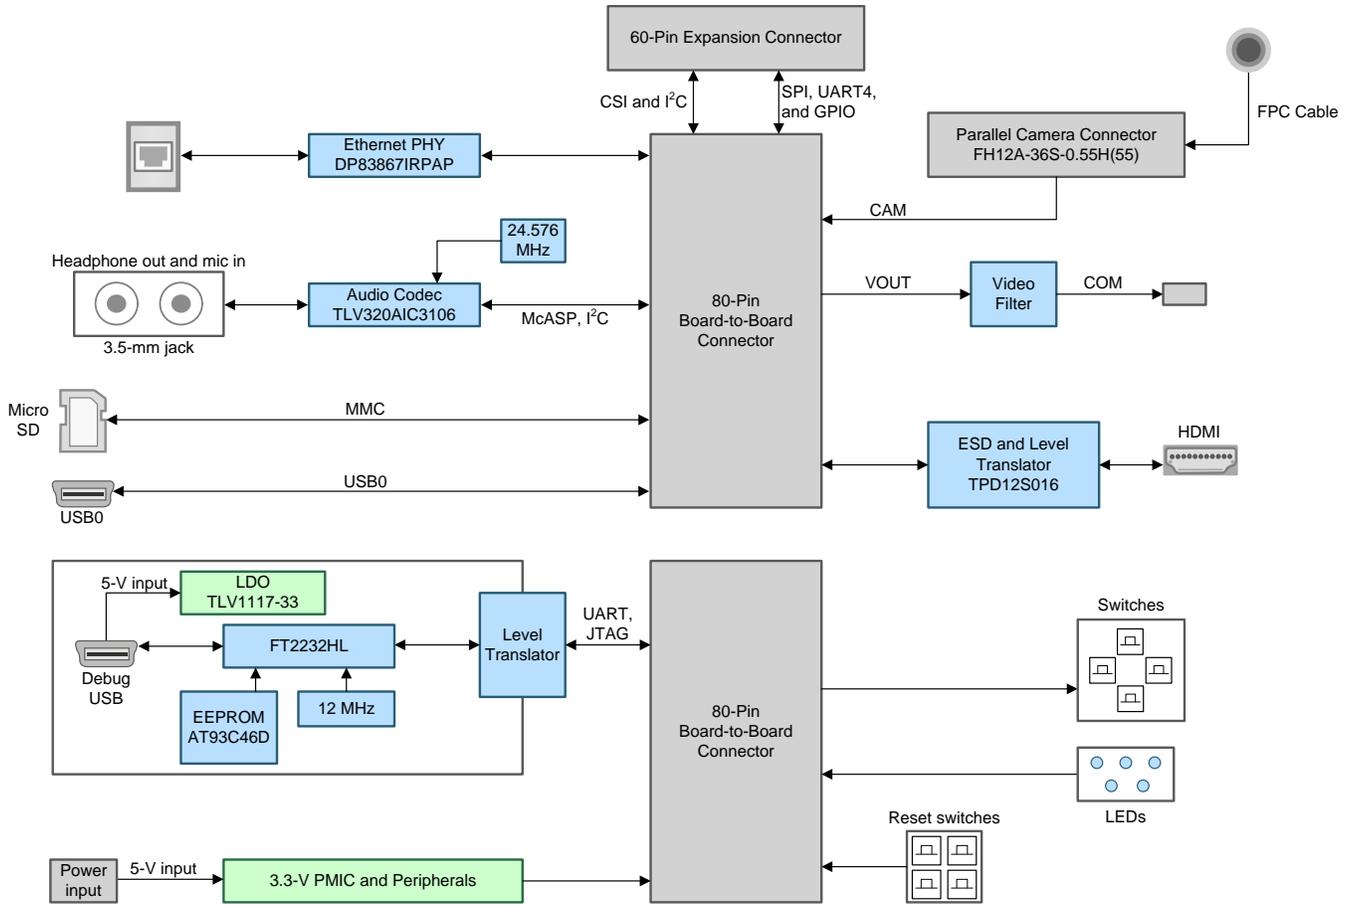

The key features of the WDR HD camera module (LI-CAM-AR0331-324-1.8) are:

- 1/3-inch, 3.1-megapixel CMOS high-definition digital imager
- Active imaging pixels: 2052 H x 1536 V
- Pixel size: 2.2  $\mu\text{m}$  x 2.2  $\mu\text{m}$
- 12-bit digital output with line and frame synchronization
- Support for 1080p at 60 fps
- Simple two-wire serial interface
- Maximum dynamic range: up to 100 dB
- Low-noise CMOS imaging technology that achieves CCD image quality
- Direct interface to the TI IP-Camera

## 6.2 Block Diagram

Figure 6-1 shows the block diagram of the CSK carrier card.

Figure 6-1. CSK Carrier Card Block Diagram

Copyright © 2016, Texas Instruments Incorporated

Figure 6-2 shows the top view of the CSK carrier card.

Figure 6-2. CSK Carrier Card (Top)

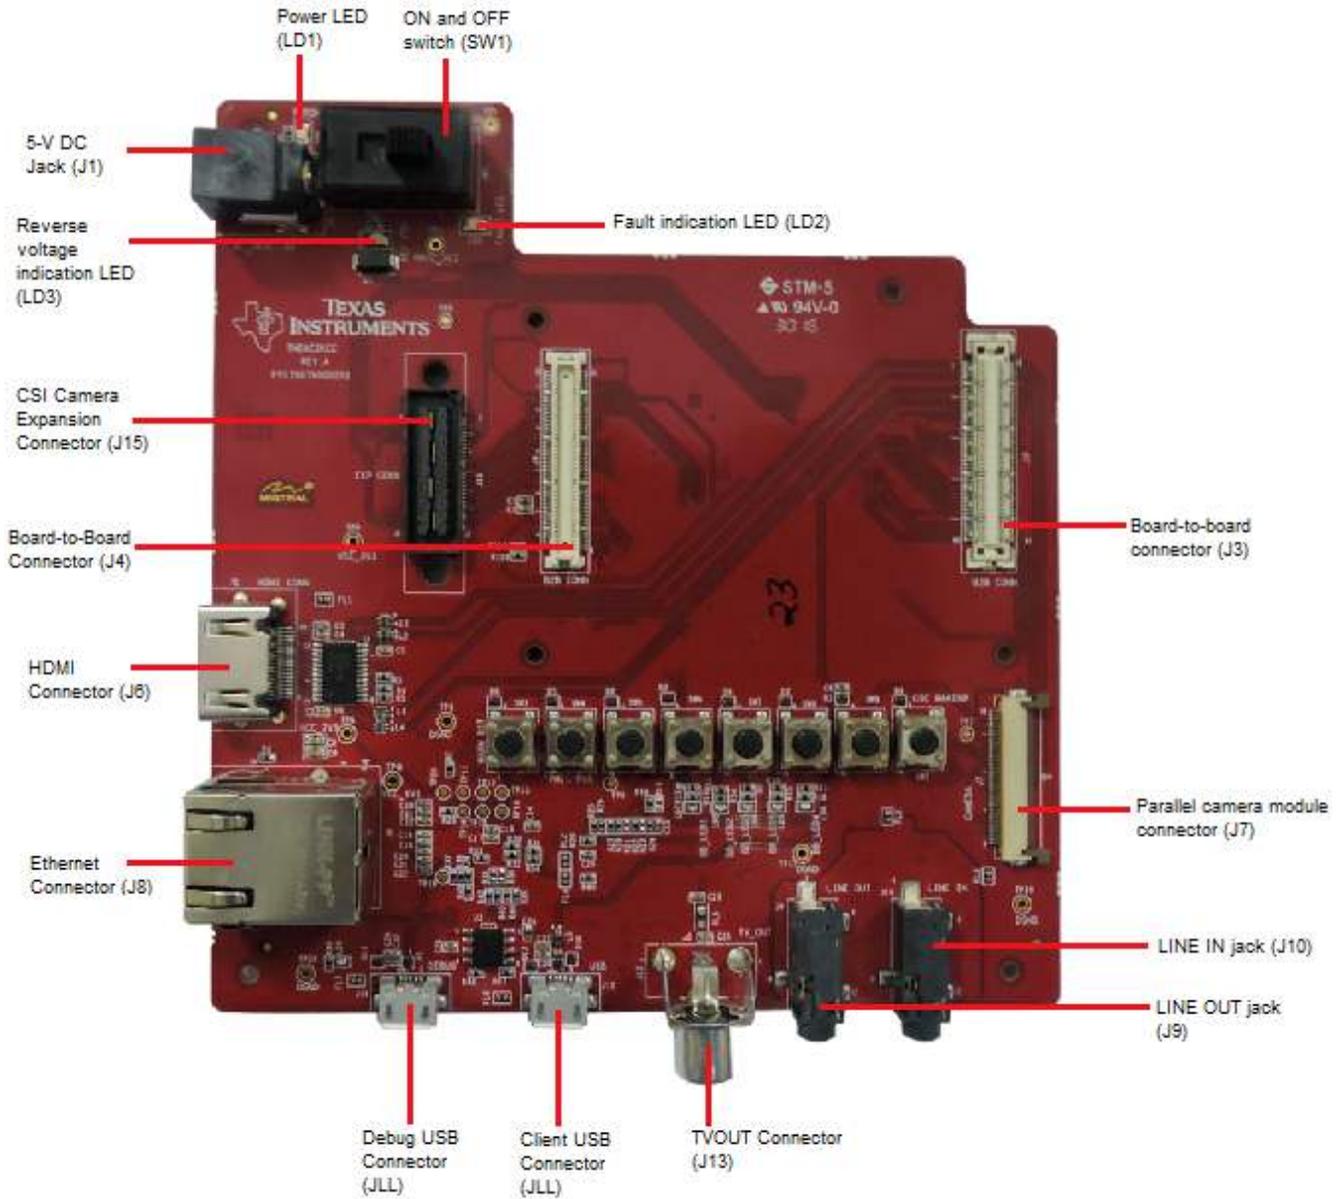

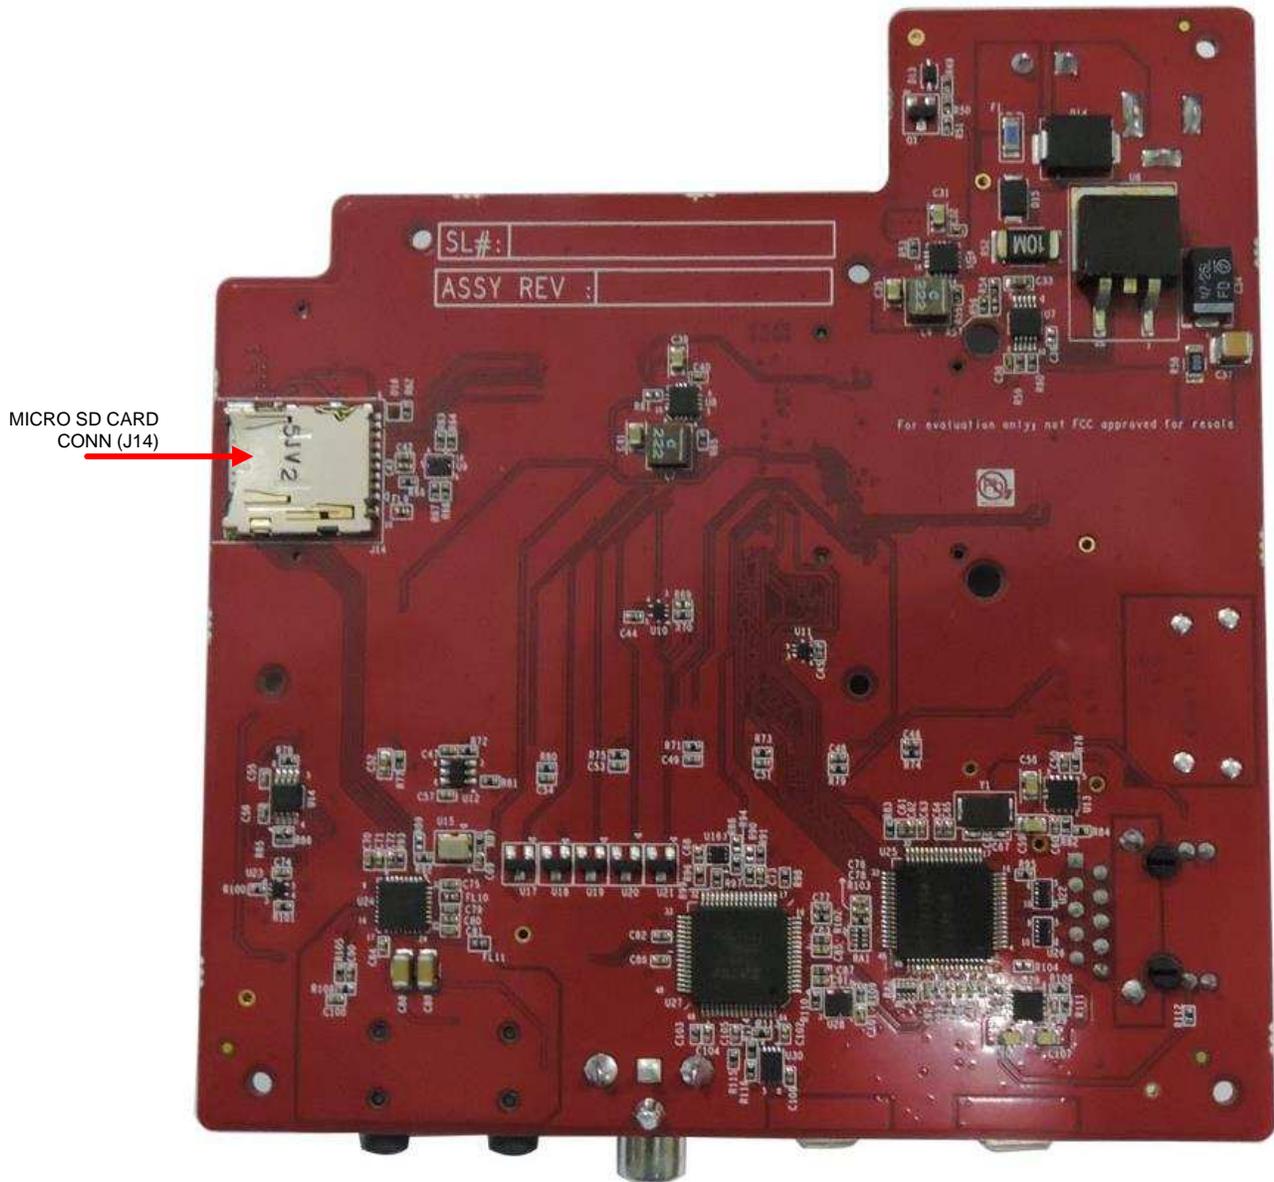

Figure 6-3 shows the bottom view of the CSK carrier card.

**Figure 6-3. CSK Carrier Card (Bottom)**

### 6.3 Power Supply

The CSK carrier card is powered through a 5-V DC jack. The power enable from the board-to-board connector enables +3.3 V. The +3.3-V input is converted into the required supply voltages by using the regulator. [Table 6-1](#) provides the regulators that are used on the CSK carrier card.

**Table 6-1. CSK Carrier Card Regulators**

Regulator	Purpose
TPS62142RGTT (U5)	3V3 generation
TPS62142RGTT (U8)	3V3 generation
TPS7A8101DRBT (U29)	2V5 generation
TPS7A8101DRBT (U13)	1V1 generation

- Processor module power: PMIC\_3V3
- I/O voltage: VCC\_3V3

The TPS62142RGTT (U5) is enabled by default to generate 3.3 V when SW1 is turned ON. This 3.3 V is used to power on the DMx processor module.

Another TPS62142RGTT (U8) is enabled by GPIO, which is driven by the DMx processor to generate the 3.3-V I/O voltage for the CSK carrier card.

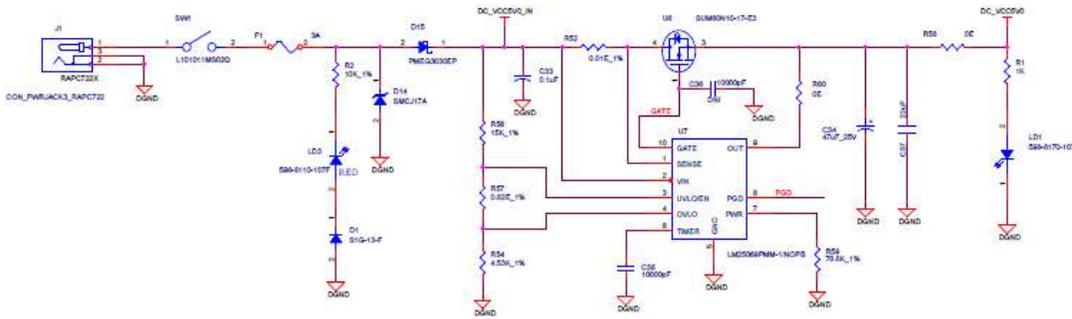

The TPS7A8101DRBT (U13 and U29) regulators are used to generate 1.1 V and 2.5 V, respectively, for Ethernet PHY.

### 6.4 Overvoltage Protection Circuit

The voltage protection circuit on the CSK carrier card protects the board from overvoltage, undervoltage, transient-voltage, and reverse-voltage input cases. The safe operation input-voltage range is 4.5 V to 5.25 V. Any voltage that is not in this range is considered a fault and the voltage protection circuit isolates the board from this input. LED LD2 indicates if the DC input applied to the board is within a safe input range.

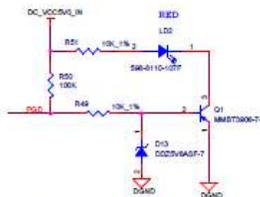

Figure 6-4 shows the overvoltage protection circuit.

Figure 6-4. Overvoltage Protection Circuit

Condition	LED Status (LD3)
Reverse Voltage	ON

Fault Indication

Note:-

When fault is indicated, set to proper voltage and power cycle the board.

Condition	LED Status (LD2)
DC_VCCSV0_IN between 4.5 to 5.25V	OFF
DC_VCCSV0_IN above 5.25V or below 4.5V	ON

## 7.1 XDS100 On-Board Emulator Interface

The CSK carrier card contains an on-board XDS100 USB emulator with a FT2232HL chip. One of the FT2232HL ports is configured for UART and JTAG.

All of the JTAG lines are connected to the board-to-board connector using voltage level translators (SN74AVC2T244, SN74AVC4T245 and SN74AVC2T245) because the FT2232HL is powered by the TLV1117-33CDCY LDO (5.0 V to 3.3 V) through the micro USB connector (J11). EEPROM (AT93C46D, 1 Kb) is interfaced to FT2232 to store configuration data.

Figure 7-1 shows the on-board emulator interface.

**Figure 7-1. XDS100 On-Board Emulator Interface**

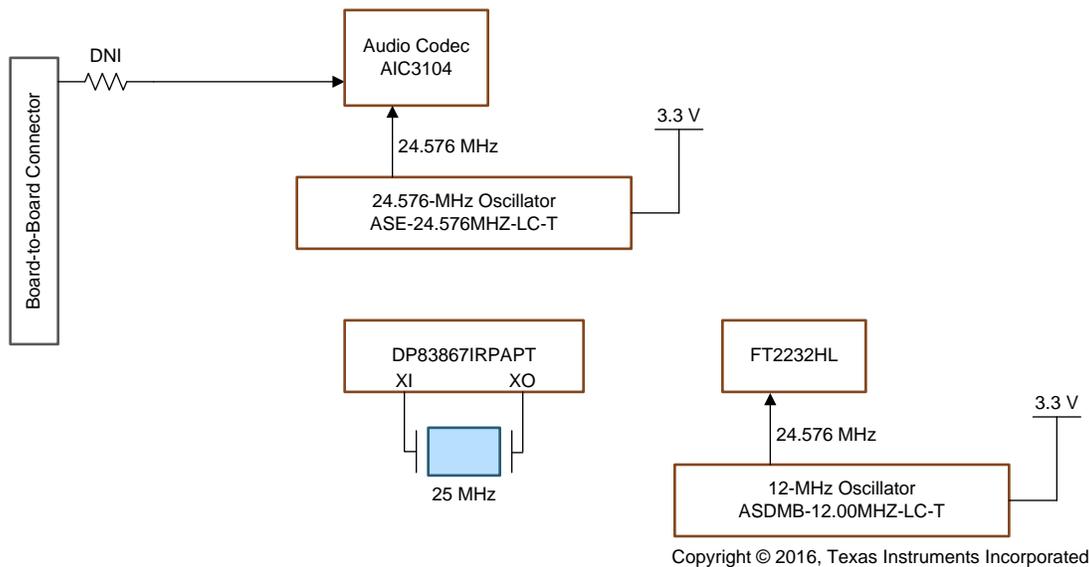

Copyright © 2016, Texas Instruments Incorporated

## 7.2 Clock Distribution

One 12-MHz oscillator (connected to the UART-to-USB converter [FT2232HL]) and one 24.576-MHz oscillator (connected to the audio codec [AIC3104]) are used in the CSK carrier card. In this configuration, the audio codec is configured as the McASP and McBSP master, and the DMX processor as a McASP and McBSP slave.

Figure 7-2 shows the block distribution diagram.

**Figure 7-2. Clock Distribution**

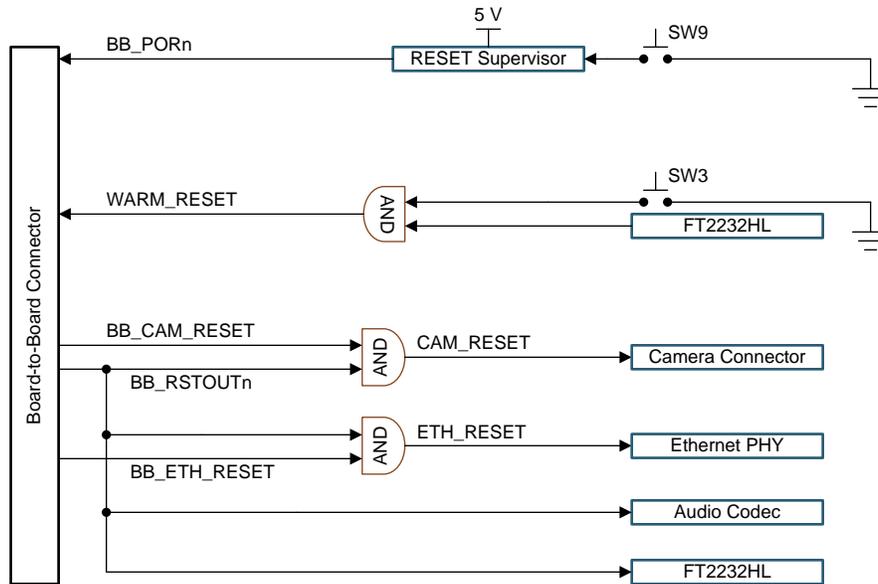

### 7.3 Reset Circuit and Distribution

The DMx Processor is reset from switch 9 (PORn), switch 3 (warm reset), or from the system reset (FT2232HL). The DMx processor provides reset out to camera, Ethernet PHY, audio codec, and FT2232HL. The camera module is reset from an AND operation of reset out from the DMx processor and camera reset GPIO. The Ethernet PHY is reset from an AND operation of reset out from the DMx processor and Ethernet reset GPIO. See [Table 3-5](#) to configure GPIOs for camera- and Ethernet-reset functionality.

Figure 7-3 shows the reset circuit and distribution diagram.

**Figure 7-3. Reset Circuit and Distribution**

Copyright © 2016, Texas Instruments Incorporated

### 7.4 Camera Interface

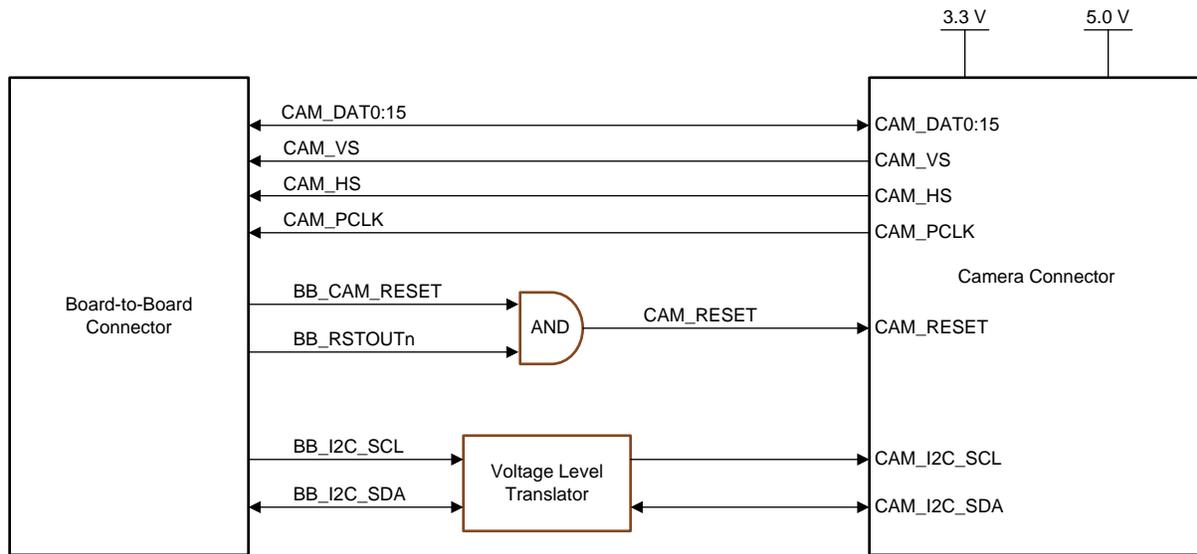

The leopard-imaging camera module (LI-CAM-AR0331-324-1.8) interfaces to the CSK carrier card with a standard 36-pin ZIP connector. The LI-CAM-AR0331-324-1.8 is a high-resolution, wide dynamic range, digital-camera module.

The device incorporates an Aptina 1/3-inch, 3.1M, CMOS WDR digital image sensor (AR0331) with an active-imaging pixel array of 2052H × 1536V. The LI-CAM-AR0331 WDR camera module produces clear, sharp digital pictures, and it is capable of capturing both continuous video and single frames, making it the perfect choice for surveillance industry with high dynamic range video. The camera supports 1080p at 30 fps H.264 streaming on TI's DM385 IPNC platform.

The CSK carrier card also supports the 3.3-V and 1.8-V I<sup>2</sup>C and RESET camera modules.

Figure 7-4 shows the parallel camera interface.

**Figure 7-4. Parallel Camera Interface**

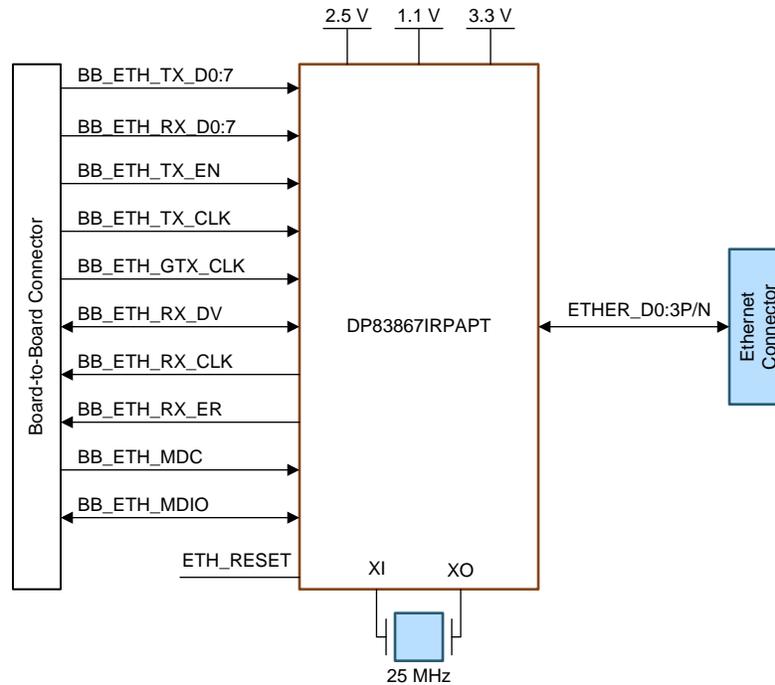

Copyright © 2016, Texas Instruments Incorporated

## 7.5 Ethernet Interface

The CSK Carrier card supports GMII and MII interfaces (see [Figure 7-5](#)). The DP83867 is a robust, low power, fully featured, physical-layer transceiver with integrated PMD sub-layers to support 10BASE-Te, 100BASE-TX, and 1000BASE-T Ethernet protocols. Optimized for ESD protection, the DP83867 exceeds the 8-kV IEC 61000-4-2 (direct contact) standard. This device interfaces directly to the MAC layer through the IEEE 802.3 MII standard, the IEEE 802.3 GMII standard, or reduced GMII (RGMII).

The DP83867 Ethernet PHY can be configured for GMII (TMDSCSK388 and TMDSCSK8127) or MII (TMDSCSK369) through register configuration. The PHY address of DP83867 is 0x19(h).

**Figure 7-5. Ethernet Interface**

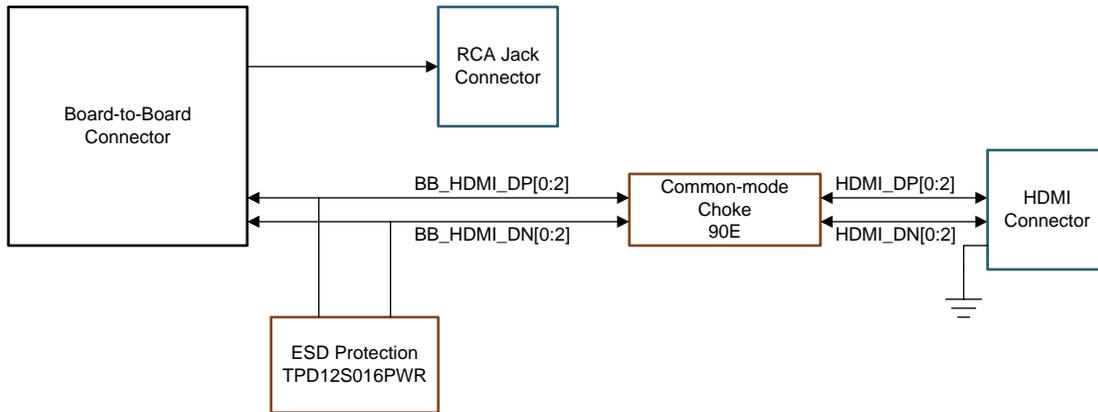

Copyright © 2016, Texas Instruments Incorporated

## 7.6 HDMI and TVOUT Interfaces

The CSK carrier card supports an HDMI interface, shown in Figure 7-6.

Figure 7-6. HDMI and TVOUT Interface

Copyright © 2016, Texas Instruments Incorporated

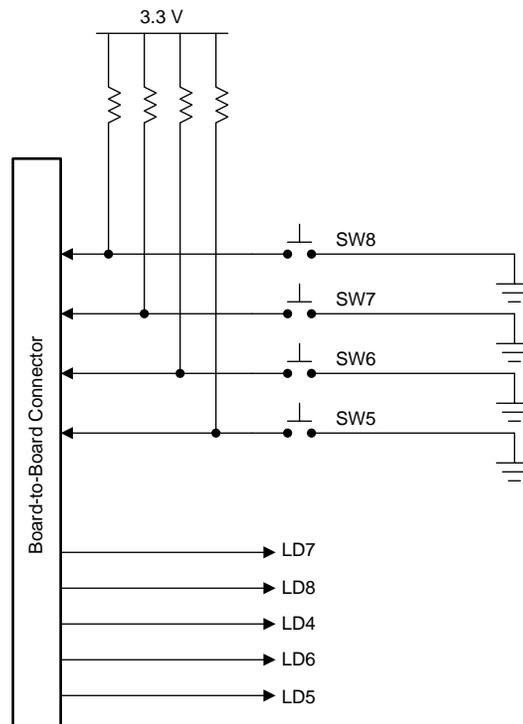

**NOTE:** The TMDSCSK369 processor module does not support an HDMI interface. Only the TMDSCSK8127 and TMDSCSK388 processor modules support HDMI interfaces.

## 7.7 LED and Switch Interface

Four push buttons and five green LEDs are provided for user input and status. Refer to to configure GPIOs for switch and LED functionality.

Figure 7-7 shows the switch and LED connections.

Figure 7-7. Switch and LED Connections

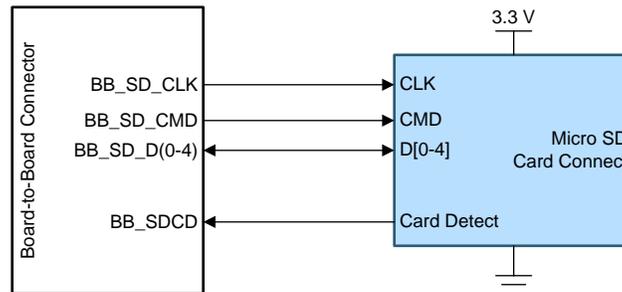

## 7.8 Micro SD Card Interface

The micro SD card connector is connected to the SD interface of the board-to-board connector, shown in [Figure 7-8](#).

The card-detect pin from the SD card connector is connected to the GPIO to ensure the presence of the SD card.

**Figure 7-8. Micro SD Card Interface**

Refer to [Section 7.13](#) for SD card connection details, and to [Table 3-5](#) to configure the GPIO for SD card detect.

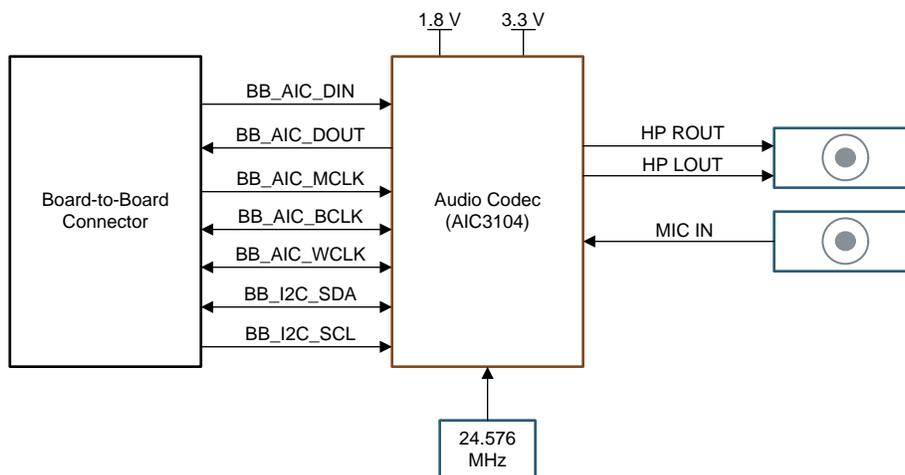

## 7.9 Audio Codec Interface

The TLV320AIC3104 device is a flexible, low power, low-voltage stereo audio codec with programmable inputs and outputs, PowerTune™ codec capabilities, fixed predefined and parameterizable signal processing blocks, integrated PLL, and flexible digital interfaces.

This audio codec is interfaced to the I2S2 port and I<sup>2</sup>C of the TMS320DMx processor modules. The codec supports McASP and McBSP configurations. A 24.576-MHz optional oscillator is provided for master clock generation. The audio line in and line out is provided through 3.5-mm audio jacks.

[Figure 7-9](#) shows the audio codec interface.

**Figure 7-9. Audio Codec Interface**

Copyright © 2016, Texas Instruments Incorporated

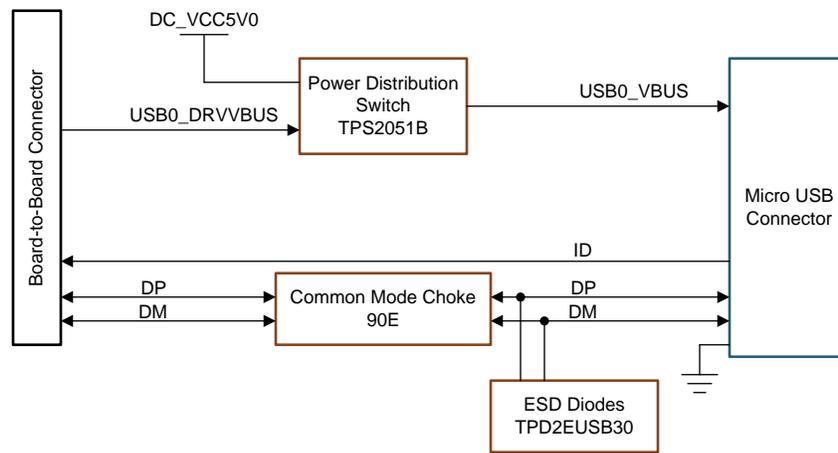

### 7.10 USB Interface

The TMS320DMx processor modules support a USB host and device controller that provides a low-cost connectivity solution for consumer portable devices by providing a mechanism for data transfer to a USB host up to 480 Mbps. The USB controller complies with the USB 2.0 standard high-speed and full-speed functions.

The USB signals of the CSK carrier card are terminated at micro USB B-type connector J12, shown in [Figure 7-10](#). ESD diodes are provided for the USB signals. The USB ID pin on the connector is connected to the USB ID pin of the TMS320DMx processors for host and device configuration.

The drive-bus signal (USB0\_DRVVBUS) from the TMS320DMx processor controls the power distribution switch (TPS2051B), which supplies VBUS (+5 V) from the CSK carrier card to the USB device that is connected to the micro USB connector. By default, the power distribution switch is disabled (pulled low). The DMx processor should drive the USB0\_DRVVBUS signal high to enable the power distribution switch. The TPS2051B supports a maximum current of 500 mA at 5 V from the CSK carrier card.

Figure 7-10. USB Interface

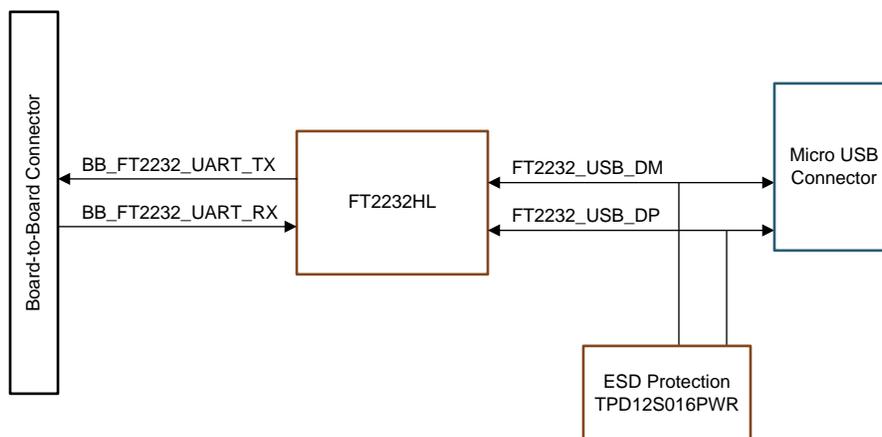

Copyright © 2016, Texas Instruments Incorporated

### 7.11 UART Interface

The UART interfaces of the board-to-board connector is connected to the FT2232 chip (for UART to USB functionality), shown in [Figure 7-11](#).

Figure 7-11. UART Interface

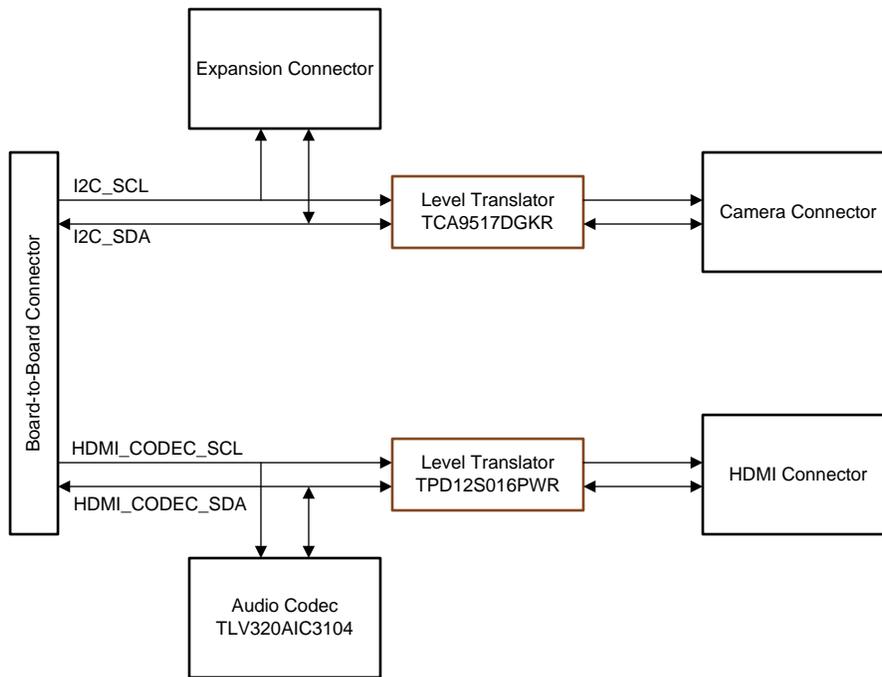

Copyright © 2016, Texas Instruments Incorporated

### 7.12 I<sup>2</sup>C Interface

The CSK carrier card supports an I<sup>2</sup>C interface that is connected through the expansion connector and a camera connector using a level translator (TCA9517DGKR) and a board-to-board connector, shown in Figure 7-12.

Another I<sup>2</sup>C interface from the board-to-board connector is connected to the audio codec and HDMI connector from level translator TPD12S016PWR.

**Figure 7-12. I<sup>2</sup>C Interface**

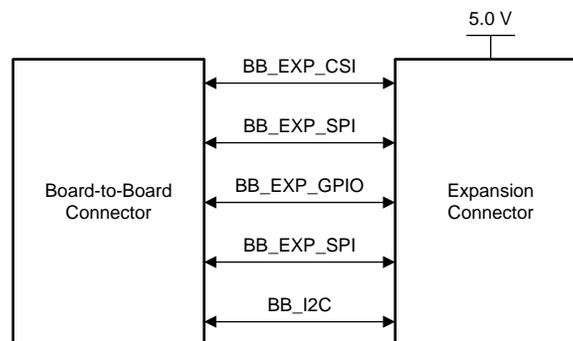

Copyright © 2016, Texas Instruments Incorporated

### 7.13 Connection Between Expansion Connector and CSK Carrier Card

The CSK carrier card supports CSI, SPI, I<sup>2</sup>C, UART, and GPIO interfaces that are connected to the expansion connector interface from the board-to-board connector, shown in Figure 7-13.

**Figure 7-13. Expansion Connector Interface**

**NOTE:** The TMDSCSK369 processor module does not support CSI and UART interfaces, shown in Figure 7-13. Only TMDSCSK8127 and TMDSCSK388 processor modules support CSI and UART interfaces from the board-to-board connector to the expansion connector.

### 8.1 Board Layout

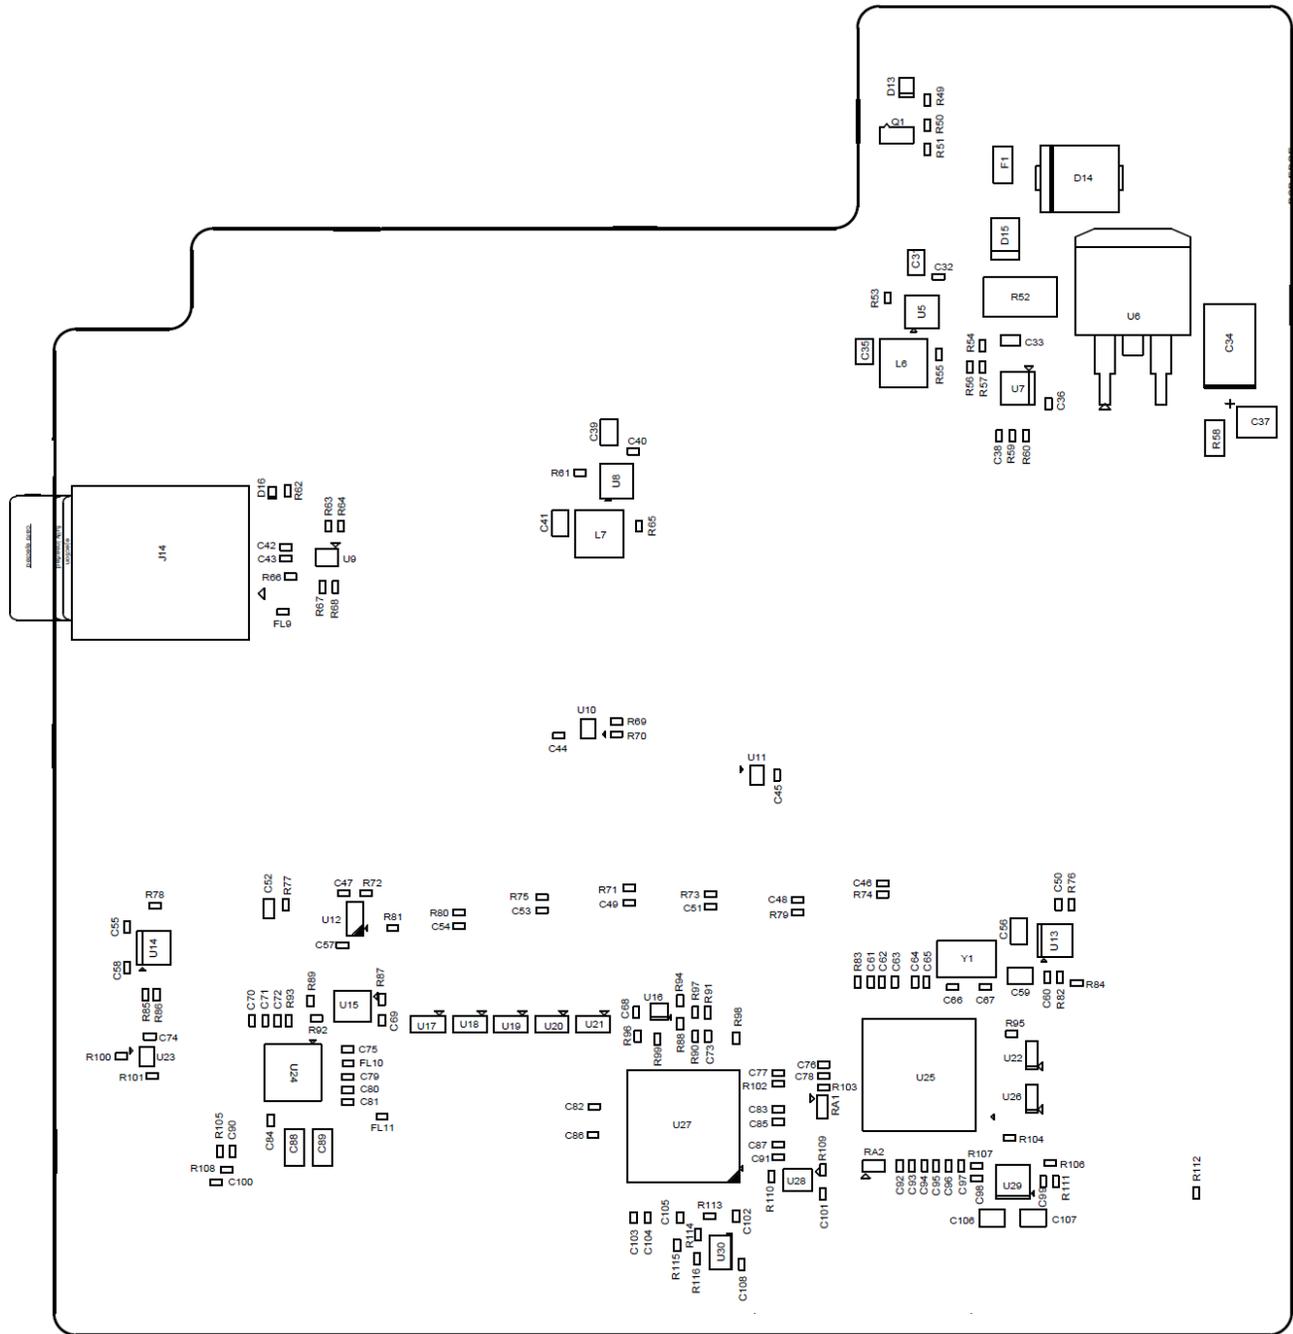

The CSK carrier card dimension is 4.4 inches x 4.724 inches (116 mm x 37.94 mm). The CSK carrier card has six layers and is powered through connector J1.

Figure 8-1 and Figure 8-2 show the top and bottom views of the assembly layout, respectively.

Figure 8-1. CSK Carrier Card Assembly Layout (Top)

**Figure 8-2. CSK Carrier Card Assembly Layout (Bottom)**

## 8.2 Connector Index

The CSK carrier card has several connectors that provide access to various interfaces on the board. [Table 8-1](#) shows the CSK carrier card connectors.

**Table 8-1. CSK Carrier Card Connectors**

Connector	Part Number	Pins	Functions
J1	RAPC722X	3	DC power jack
J3	FX11LA-80S/8-SV(71)	88	Board-to-board connector

16	SHIELD GND

### 8.2.8 Stereo-Audio Jack (J9 and J10)

The CSK carrier card has two 3.5-mm female stereo jacks that are connected to the AIC3104 audio codec.

- HP OUT is for connecting to headphones. See Table 8-9 for pin information.
- MIC IN is for connecting to a microphone input. See Table 8-10 for pin information.

**Table 8-9. HP OUT**

Pin Number	Description
1	GND
2	LEFT_OUT
3	RIGHT_OUT
4	NC

**Table 8-10. MIC IN**

Pin Number	Description
1	GND
2	LEFT_IN
3	RIGHT_IN
4	NC

### 8.2.9 Micro USB Connector (J11 and J12)

The CSK carrier card has two micro USB connectors. Micro USB connector J11 provides access to the XDS100V2 on-board emulator. The USB host and device port of the DMx device is available through the J12 USB connector. [Table 8-11](#) provides the micro USB connector (J11 and J12) pin information.

**Table 8-11. Micro USB Connector**

Pin Number	Description
1	VDD
2	D-
3	D+
4	ID
5	GND
6	USB0_GND
7	USB0_GND
8	USB0_GND
9	USB0_GND

### 8.2.10 Composite Video OUT RCA Connector (J13)

[Table 8-12](#) provides the composite video OUT RCA connector (J13) pin information.

**Table 8-12. Composite Video OUT RCA Connector**

Pin Number	Description
1	VIDEO OUT
2	DGND
3	DGND
4	DGND

### 8.2.11 Micro SD Card Connector (J14)

The micro SD card holder is located on the bottom side of the board, and it provides an interface to micro SD cards. The connector is a 14-pin SD card holder.

[Table 8-13](#) provides the micro SD card connector (J14) pin information.

**Table 8-13. Micro SD Card Connector (J14)**

Pin Number	Pin Description
1	DAT2
2	CD/DAT3
3	CMD
4	VDD
5	CLOCK
6	VSS
7	DAT0
8	DAT1
9	CD1
10	SDCD_GND
11	SDCD_GND
12	CD2
13	SDCD_GND
14	SDCD_GND

### 8.3 Push Buttons

The CSK carrier card has nine switches. Out of the nine switches, four are for general purposes. Refer to [Table 3-5](#) to configure the switch functionality. [Table 8-14](#) details the functionality of each switch.

**Table 8-14. CSK Carrier Card Switches**

Switch-Button Number	Description
SW1	Power ON and OFF switch
SW2	Oscillator wakeup
SW3	Warm reset
SW4	PMIC reset
SW5	General purpose
SW6	General purpose
SW7	General purpose
SW8	General purpose
SW9	Power on reset

### 8.4 Test Points

The CSK carrier card has 23 test points. [Table 8-15](#) provides the test point and corresponding signals.

**Table 8-15. Test Points of CSK Carrier Card**

Test Point	Signal
TP1	DGND
TP5

## 8.5 System LEDs

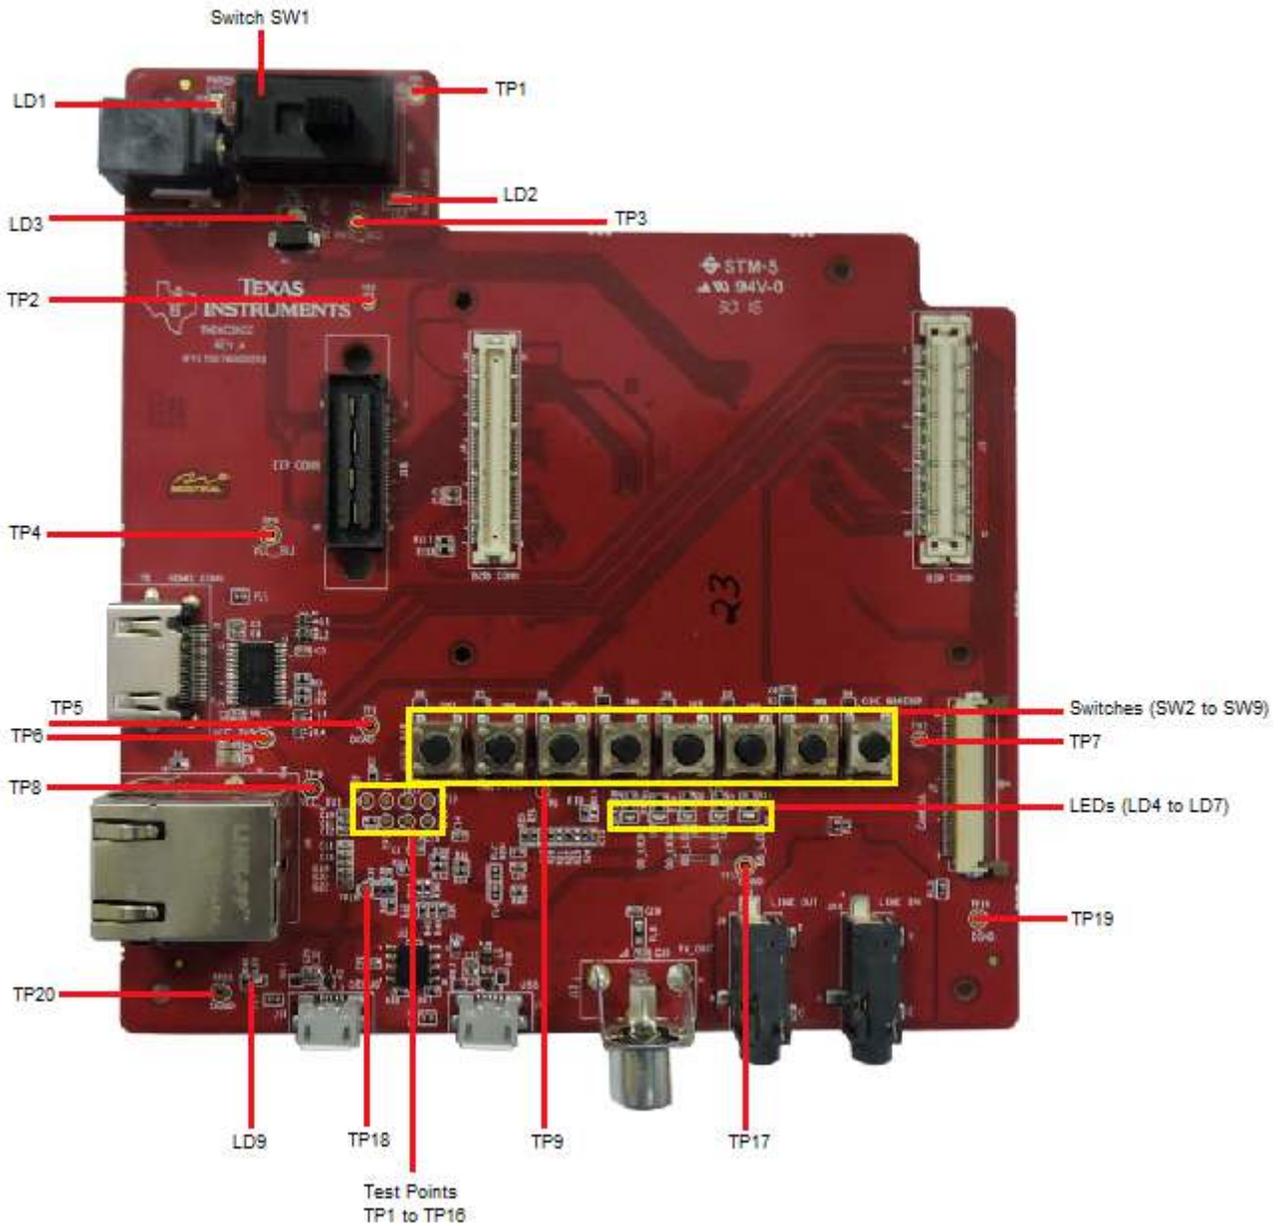

The CSK carrier card has three LEDs. Refer to [Table 3-5](#) to configure the LED functionality for LED1, LED2, and LED3. [Table 8-16](#) provides the LED information.

**Table 8-16. LED Information**

LED	Color	Description
LD1	Green	LED1
LD2		LED2
LD3		LED3
LD4		Board-power LED
LD5		FT2232 power-enable LED

Figure 8-5 shows the position of LEDs, test points, and push buttons on the CSK carrier card.

## 9.2 Power Supply Calculation

Table 9-1 provides the power supply calculation information.

**Table 9-1. Power Supply Calculation**

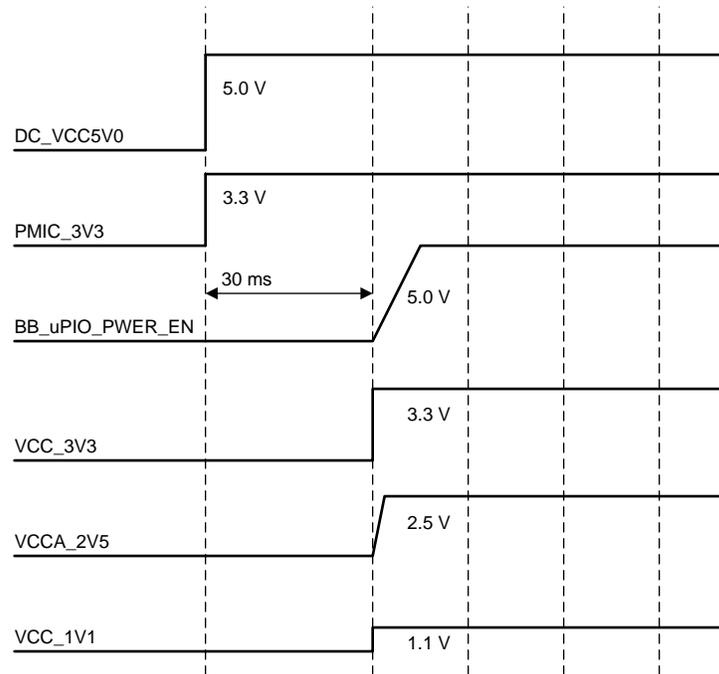

Input Supply (V)		5			PMIC3V3		VCC_3V3	
<b>Regulatory Efficiency</b>						0.9	0.86	
<b>Input Voltage</b>		<b>Board-to-Board Connect</b>	3.3	3.3	5	5	5	
<b>Output Voltage</b>		1.8	2.5	1.1		3.3	3.3	
<b>Regulator Name</b>		TPS6216DSGT	TPS7A8101	TPS7A8101		TPS62142RGTT (U5)	TPS62142RGTT (U8)	5-V DC IN
		<b>Active</b>	<b>Active</b>	<b>Active</b>		<b>Active</b>	<b>Active</b>	<b>Active</b>
Description	Part Number							
Ethernet PHY external regulator	TPS7A8101 (2.5 V)						141	108.2093023
	TPS7A8101 (1.1 V)						125	95.93023256
Audio codec	TLV320AIC3104	2.5					170	130.4651163
Camera module	LI-CAM-AR0331-324-1.8				800		300	–
Ethernet PHY	DP83867IRPAPT		141	125			22	16.88372093
Expansion connector (CSI camera)								0
Micro SD card							80	61.39534884
LED x 5							10	7.674418605
24.576-MHz oscillator							15	11.51162791
<b>Current Consumption<sup>(1)</sup></b>						0	863	1232.069767
<b>Power Consumption (mW)</b>						0	2847.9	6160.348837
								5-V DC IN
		<b>Active</b>				TMDSCSK388		2210.73
<b>Current Consumption on 5-V power input<sup>(1)</sup></b>		1232.069767				TMDSCSK8127		2660.863
<b>Power Consumption on 5-V power input (mW)</b>		6160.348837				TMDSCSK369		1052.032
<b>USB Bus-Powered Devices</b>							3.3	5
							TLV1117-33CDCY	5-V USB
USB to JTAG or UART	FT2232HL						130	130
EEPROM	AT93C46DY6-YH-T						2	2

<sup>(1)</sup> All current ratings are in mA.

### 9.3 Power-up Sequence

Figure 9-2 shows the power sequencing for the CSK carrier card.

**Figure 9-2. Power-up Sequence**

## IMPORTANT NOTICE FOR TI DESIGN INFORMATION AND RESOURCES

Texas Instruments Incorporated ("TI") technical, application or other design advice, services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using any particular TI Resource in any way, you (individually or, if you are acting on behalf of a company, your company) agree to use it solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources.

You understand and agree that you remain responsible for using your independent analysis, evaluation and judgment in designing your applications and that you have full and exclusive responsibility to assure the safety of your applications and compliance of your applications (and of all TI products used in or for your applications) with all applicable regulations, laws and other applicable requirements. You represent that, with respect to your applications, you have all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. You agree that prior to using or distributing any applications that include TI products, you will thoroughly test such applications and the functionality of such TI products as used in such applications. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

You are authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING TI RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY YOU AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You agree to fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of your non-compliance with the terms and provisions of this Notice.

This Notice applies to TI Resources. Additional terms apply to the use and purchase of certain types of materials, TI products and services. These include; without limitation, TI's standard terms for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>), [evaluation modules](#), and [samples](http://www.ti.com/sc/docs/sampterm.htm) (<http://www.ti.com/sc/docs/sampterm.htm>).
