DESCRIPTION

The TDA7365 is a new technology Dual Audio Amplifier in Multiwatt15 package especially designed for stereo car radio applications.

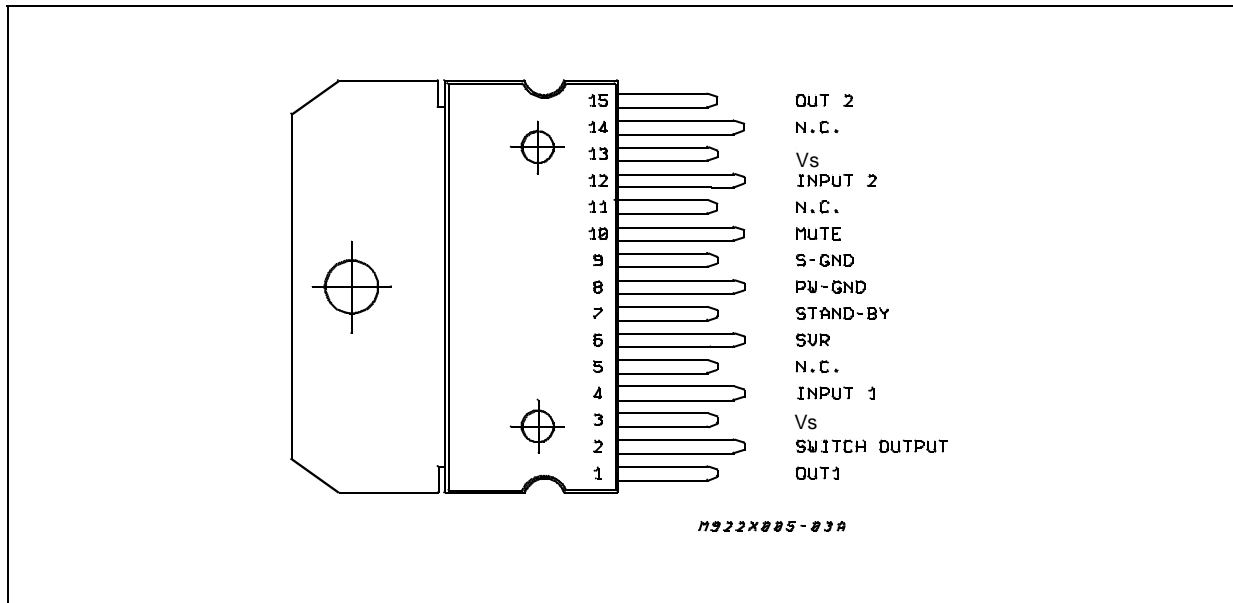

Thanks to the fully complementary output configuration the TDA7365 delivers a rail to rail voltage swing with no need of bootstrap capacitors. It includes a solid state switch, enabled by a ST-BY function common to the audio section, suitable for supplying both the signal processing part of the car radio set and the lamps. As a result the power-on operation is simplified, thereby saving cost and space in the whole power section.
