Ripple is peak to peak with 20 MHz bandwidth and 10 μF (Electrolytic capacitor) in parallel with a 0.1 μF capacitor at rated line voltage and load ranges.
- Combined output power of main output, fan supply and standby supply shall not exceed max. power rating.
- Standby output voltage 5 V/ 1.5A with tolerance including set point accuracy, line and load regulation is +/-10%.
Ripple and noise is less than 5%.
- Specifications are for nominal input voltage, 25°C unless otherwise stated.
- PSU is supplied with J3, pin-6 and pin-7 shorted to enable main output without remote on/off feature.
- Fan supply output voltage is 12V/500mA with regulation band +/-30 % and Ripple is less than 10%. To get 12V Fan supply output voltage, minimum 10 % load on Main output voltage is required.

Signal(s)

Power Good / Power Fail Signal

The delay is 0.1 s to 0.5 s

value at AC Power off

Power Good : Is a TTL signal which goes high after main output reaches 90% of its set value.

Power Fail : The same signal goes low at least 1ms before main output falls to 90% of set

Remote Sense

Compensates for 200 mV drop

Remote on/off

Pin 6 & Pin 7 of J3 can be used for Remote on/off.

Shorting Pin 6 to Pin 7 enables main output while keeping the pins open disables main output

Note: - Provision of Inhibit Remote ON/OFF is available. +5V at Pin 7 will switch off the main output.

OCP limit set

Pin 8 & Pin 9 of J3 must be shorted

Installation instruction for current sharing:

During the installation and setup of parallel supplies in a system it is important that a single remote sense point be used for all the supplies. The remote sense voltage between the supplies must be adjusted to within 1% to ensure the supplies are inside the 1% capture window. If the supplies are not initially adjusted inside the capture window the supplies will not current share satisfactorily.

Set-Up Procedures:

1. Connect load cables to the outputs of each supply.
2. Connect the remote sense lines to the load in twisted style . (A common remote sense point must be used for all the supplies in parallel).
3. Connect all the "LS" signal(Pin 10) on the J3 connector between the supplies.
4. Adjust remote sense voltage of each supply to within 1% of rated output voltage or readjust to required set point. (Adjustment to be done with all other parallel supplies off).
5. Current sharing between the supplies can be verified by monitoring the output current of each supply with a hall effect DC current probe. The supplies should share to within 10% of the total load current.
The maximum recommended power output for three units in parallel would be 2700W.
6. The current share circuit has a capture window voltage of +/- 1% of the rated output voltage. If the output remote sense voltage of one of the supplies is adjusted outside the 1% window the supplies will not current share satisfactorily.
