Male machined PCB contact, size #8, Silver plating

82911685NAPC

SOURIAU / 8291 Series

8291 contact series is composed of two contact sizes: #12 ($\varnothing 2.4\text{mm}$) contacts for application up to 26 Amperes and #8 ($\varnothing 3.6\text{mm}$) contacts for application up to 44 Amps.

Thanks to this power contact offering and dedicated connector layout, you can combine within the same connector signal and power lines. We can also offer dedicated connector and contacts for power lines for 2 + earth or 3 phases power connections when you want to dissociate signal and power.

High electrical performances are guaranteed thanks to a high conductive copper alloy body combined with two plating offers: gold over nickel plating or silver plating.

Pin and socket contacts are solid machined crimp snap-in and sockets for high performance levels.

COMPARE

Two contact sizes: #12 (Ø2.4mm) and two contact sizes: #12 (Ø2.4mm)

Possible to combine within the same connector signal and power lines
