## 32V, 2A, Bipolar Stepper Motor Driver Evaluation Board

### DESCRIPTION

The EV6504-V-00A is an evaluation board for the MP6504GV, a stepper motor driver with a built-in microstepping translator.

The EV6504-V-00A operates from an 8V to 24V supply voltage range, and can deliver motor currents up to 2A. It can drive a bipolar stepper motor in full step, half-step, quarter-step, and eighth-step modes by setting MS2 and MS1. The input control signals and reference voltage for the MP6504GV are applied through the connector, or generated on the board.

### FEATURES

- Wide 8V to 32V Input Voltage Range
- Up to 2A Programmable Output Current
- Supports Full-, Half-, Quarter-, and Eighth-Step Modes
- Adjustable Mixed Decay Ratio or Automatic Decay
- OCP, OVP, and OTP
- Fault Indication Output

### APPLICATIONS

- Printers
- General Bipolar Stepper Drivers

## QUICK START GUIDE

1. Attach the input voltage ( $8V \leq V_{IN} \leq 32V$ ) to the VIN connector, and the input ground to the GND connector.
2. Switch SW2 and SW3 to position 3 (top side). This enables the external reference voltage input from the EXT\_REF connector, as well as the step signal input from the EXT\_STEP connector.
3. Attach the reference voltage ( $0V \leq V_{EXT\_REF} \leq 1V$ ) to the EXT\_REF connector to set the output current.
4. Attach the step signal to the EXT\_STEP connector.
5. Set the input control and logic signal through the CN1 connector via the external MCU, or through SW1 via manual action. Manual action requires an external 3.3V or 5V VCC voltage as a pull-up power supply.
