

DEMIOT

The Demiot card is designed to improve Bluetooth and Wi-Fi applications. The card has temperature, moisture sensor and carbon monoxide sensor inlet on the card. With multiple demiot cards, the Wi-Fi Mesh connection can communicate with the cards.

There are 1 master device and 2 slave devices in the demo application. Each device show its own temperature and carbon dioxide value on the screen. At the same time, the slave devices sends the sensor values measured by Wi-Fi mesh connection to the master device.
