

High Precision Surface Mount 4 Resistor Network

Dual-In-Line Package with TCR Tracking ≤ 0.5 ppm/°C, Tolerance Match of 0.01% and Ratio Stability of 0.005%

FEATURES

- Temperature coefficient of resistance (TCR) (-55°C to +125°C, +25°C ref):
 - Absolute: ± 0.2 ppm/°C typical (see Table 2)
 - Tracking: ± 0.5 ppm/°C typical (see Table 2)
- Power rating (at 70°C):
 - Entire package: 0.4 W
 - Each resistor: 0.1 W
- Resistance tolerance match: 0.01%
- Ratio stability: 0.005% (0.1 W at 70°C, 2000 hours)
- Large variety of resistance ratios
- Electrostatic discharge (ESD) to 25 kV
- Short time overload: $\leq 0.0025\%$
- Non inductive, non capacitive design
- Rise time: 1 ns without ringing
- Current Noise: < -40 dB
- Thermal EMF: 0.05 μ V/°C
- Voltage coefficient < 0.1 ppm/V
- Non inductive: < 0.08 μ H
- Non hot spot design
- Terminal finishes available: Lead (Pb)-free; Tin/Lead alloy
- For better performances please contact us
- Available with Z-Foil technology, please see SMNZ datasheet.

APPLICATIONS

- Instrumentation amplifiers
- Bridge networks
- Differential amplifiers
- Ratio arms in bridge circuits
- Medical and test equipment
- Military
- Airborne, etc.

Any value and any ratio available within resistance range

INTRODUCTION

Bulk Metal® Foil (BMF) Technology outperforms all other resistor technologies available today for applications that require high precision and high stability.

This technology has been pioneered and developed by Vishay Foil Resistors, and products based on this technology are the most suitable for a wide range of applications.

BMF technology allows us to produce Customer Orientated products designed to satisfy challenging and specific technical requirements.

Model SMN offers low TCR (absolute and tracking), excellent load life stability, tight tolerance (absolute and match), excellent ratio stability, low thermal EMF, low current noise and low voltage coefficient - all in the same resistor.

The SMN Surface Mount Network is made up of 4 independent BMF resistors in a small standard molded epoxy package with 50 MIL lead pitch (JEDEC MS-012 package).

The electrical specification of this integrated construction offers improved performance and better real estate utilization over discrete resistors and matched sets. The resistor may be used independently or as divider pairs.

Our Application Engineering Department is available to advise and make recommendations. For non-standard technical requirements and special applications, please contact us. Contact us using the e-mail address in the footer below.

Table 1 – Resistance Values and Tolerances
(Tighter performances are available)

Resistance Values	100 Ω – 10 k Ω per resistor
Absolute Tolerance Each Resistor	$\pm 0.02\%$, $\pm 0.05\%$, $\pm 0.1\%$
Resistance Tolerance Match	0.01%, 0.02%, 0.05%

* This datasheet provides information about parts that are RoHS-compliant and/or parts that are non-RoHS-compliant. For example, parts with lead (Pb) terminations are not RoHS compliant. Please see the information/tables in this datasheet for details.

Figure 5 – Trimming to Values
(conceptual illustration)

Note
To acquire a precision resistance value, the Bulk Metal® Foil chip is trimmed by selectively removing built-in “shorting bars.” To increase the resistance in known increments, marked areas are cut, producing progressively smaller increases in resistance. This method reduces the effect of “hot spots” and improves the long-term stability of Bulk Metal Foil resistors.
