## Motion Module

---

---

### Product Features

- High Performance 32-bit Embedded Controller
- Cost effective solution
- Small form factor ideal for embedded applications
- Low power; 13.25mA in active mode
- System in deep sleep consumes 70µA
- Host interface via I<sup>2</sup>C
- 3.3-Volt I/O
- Package
  - 17mm x 17mm, 16-pin module

### Sensor Firmware

- Sensor fusion firmware features include:
  - Self-contained 9-axis sensor fusion
  - Sensor data pass-through
  - Fast in-use background calibration of all sensors and calibration monitor
  - Magnetic immunity: Enhanced magnetic distortion, detection and suppression
  - Gyroscope drift cancellation
  - Fully calibrated
- Easy to implement complete turnkey sensor fusion solution
- Sensor power management
- Sensors Supported
  - Bosch BMC150 Geomagnetic Sensor/Accelerometer
  - Bosch BMG160 Gyroscope

### Hardware Features

The hardware features in the MM7150 module include the following:

- I<sup>2</sup>C Controller
  - Supports I<sup>2</sup>C bus speeds to 400kHz
  - Host Interface Supports Slave Operation
- Low Power Modes

### Target Markets

- Internet of Things Applications
- Remote Controls, Gaming
- Fitness Monitoring
- Applications requiring data from an accelerometer, magnetometer and gyroscope

### Temperature Ranges Available

- Industrial (-40°C to +85°C)
- Commercial (0°C to +70°C)

### Description

The MM7150 Motion Module is a simple, cost-effective solution for integrating motion and positioning data into a wide range of applications. The module contains the SSC7150 motion coprocessor with integrated 9-axis sensor fusion as well as high performance MEMS technology including a 3-axis accelerometer, gyroscope and magnetometer. All components are integrated, calibrated and available on the module for PCB mounting.

## TO OUR VALUED CUSTOMERS

It is our intention to provide our valued customers with the best documentation possible to ensure successful use of your Microchip products. To this end, we will continue to improve our publications to better suit your needs. Our publications will be refined and enhanced as new volumes and updates are introduced.

If you have any questions or comments regarding this publication, please contact the Marketing Communications Department via E-mail at [docerrors@microchip.com](mailto:docerrors@microchip.com). We welcome your feedback.

### Most Current Data Sheet

To obtain the most up-to-date version of this data sheet, please register at our Worldwide Web site at:

<http://www.microchip.com>

You can determine the version of a data sheet by examining its literature number found on the bottom outside corner of any page. The last character of the literature number is the version number, (e.g., DS30000000A is version A of document DS30000000).

### Errata

An errata sheet, describing minor operational differences from the data sheet and recommended workarounds, may exist for current devices. As device/documentation issues become known to us, we will publish an errata sheet. The errata will specify the revision of silicon and revision of document to which it applies.

To determine if an errata sheet exists for a particular device, please check with one of the following:

- Microchip's Worldwide Web site; <http://www.microchip.com>
- Your local Microchip sales office (see last page)

When contacting a sales office, please specify which device, revision of silicon and data sheet (include -literature number) you are using.

### Customer Notification System

## 1.3 Pin Descriptions

The pin descriptions are provided in [Table 1-1](#).

**TABLE 1-1: PIN DESCRIPTIONS**

Pin Number	Name	Type	Description
1	HOST_TO_SH_WAKE	I	Used to wake Motion Module from a Sleep state. This signal must be driven high at least 11ms prior to sending any I <sup>2</sup> C traffic to the Motion Module. Active high input.  This pin should be connected to VDD through a 100KΩ resistor.
11	HOST_TO_SH_RESET	I	Reset input. Used to reset the host I <sup>2</sup> C interface.  This pin should be connected to VDD through a 100KΩ resistor.
4	HIDI2C_HOST_INT	O	Alert Interrupt signal from Motion Module to Host. Used to tell Host data from Motion Module is ready to be sent out. Active low output.
15	HIDI2C_HOST_CLK	IOD	I <sup>2</sup> C Controller Clock to Host Interface
16	HIDI2C_HOST_DAT	IOD	I <sup>2</sup> C Controller Data to Host Interface

## 2.0 MM7150 MODULE

The MM7150 Motion Module provides 9-axis sensor fusion that includes a 3-axis accelerometer, a 3-axis gyroscope and a 3-axis magnetometer. The module has an I<sup>2</sup>C interface to the host, and supports HID over I<sup>2</sup>C. The module includes the Bosch BMC150 Geomagnetic Sensor/Accelerometer and Bosch BMG160 Gyroscope.

### 2.1 Module Block Diagram

The block diagram of the module is shown in Figure 2-1.

**FIGURE 2-1: MM7150 MODULE BLOCK DIAGRAM**

### 2.2 Module Features

The MM7150 Motion Module provides self-contained 9-axis sensor fusion. It supports fast in-use background calibration of all sensors and calibration monitor. Magnetic immunity features provide enhanced magnetic distortion detection and suppression. The module also provides gyroscope drift cancellation.

### 2.3 Calibration Requirements

User calibration is not required. The MM7150 Motion Module supports fast in-use background calibration of all sensors and calibration monitor.

## 3.0 MM7150 HID FUNCTIONS

The MM7150 responds to the standard HID protocol for sensors when used over I<sup>2</sup>C, defined in References [1] and [2]. The hierarchy of descriptors used in the HID protocol is as follows:

The following sections described the descriptors required for communicating with the MM7150:

### 3.1 HID Descriptor

### 3.2 Report Descriptors

Report descriptors are composed of pieces of information. Each piece of information is called an Item.

The HID class driver contains a parser used to analyze items found in the Report descriptor. The parser extracts information from the descriptor in a linear fashion.

The parser collects the state of each known item as it walks through the descriptor, and stores them in an item state table. The item state table contains the state of individual items. From the parser's point of view, a HID class device looks like the following.

The Report descriptor is unlike other descriptors in that it is not simply a table of values. The length and content of a Report descriptor vary depending on the number of data fields required for the device's report or reports. The Report descriptor is made up of items that provide information about the device.

The HID report for each sensor has two sections **Feature Report** and **Input Report**. The feature report for all the sensors is same. The following sections describe the Feature Report and all Input Reports returned by the Motion Module.

## 4.0 MM7150 HOST INTERFACE

### 4.1 I<sup>2</sup>C

The MM7150 can be connected to a host via the I<sup>2</sup>C interface. The I<sup>2</sup>C interface is compliant with the I<sup>2</sup>C standard described in [4], at speeds up to 400KHz. Above the transport layer, the protocol used by the MM7150 is the same HID protocol used when communicating over USB. The mapping of HID over I<sup>2</sup>C is defined in Reference [3]. The protocol and the interface, taken together, are compliant with Windows 8/8.1 certification.

## 5.0 MM7150 FIRMWARE UPDATE

The firmware in the MM7150 Module may be updated at run time. See Reference [\[5.\]](#) for details.

## 8.0 ELECTRICAL CHARACTERISTICS

This section provides an overview of the MM7150 electrical characteristics. Additional information will be provided in future revisions of this document as it becomes available.

Absolute maximum ratings for the MM7150 devices are listed below. Exposure to these maximum rating conditions for extended periods may affect device reliability. Functional operation of the device at these or any other conditions, above the parameters indicated in the operation listings of this specification, is not implied.

### Absolute Maximum Ratings

(See Note 1)

Ambient temperature under bias (Commercial temperature range).....	.0°C to +70°C
Ambient temperature under bias (Industrial temperature range) .....	-40°C to +85°C
Storage temperature .....	-65°C to +150°C
Voltage on VDD with respect to VSS .....	-0.3V to +4.0V
Voltage on any pin that is not 5V tolerant, with respect to VSS (Note 3) .....	-0.3V to (VDD + 0.3V)
Voltage on any 5V tolerant pin with respect to VSS when VDD ≥ 2.3V (Note 3) .....	-0.3V to +5.5V
Voltage on any 5V tolerant pin with respect to VSS when VDD < 2.3V (Note 3) .....	-0.3V to +3.6V
Maximum current out of VSS pin(s) .....	300 mA
Maximum current into VDD pin(s) (Note 2) .....	300 mA
Maximum output current sunk by any I/O pin.....	15 mA
Maximum output current sourced by any I/O pin.....	15 mA
Maximum current sunk by all ports.....	200 mA
Maximum current sourced by all ports (Note 2) .....	200 mA

**Note 1:** Stresses above those listed under “**Absolute Maximum Ratings**” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions, above those indicated in the operation listings of this specification, is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

**2:** Maximum allowable current is a function of device maximum power dissipation (see [Table 8-2](#)).

**3:** See the “[Pin List](#)” section for the 5V tolerant pins.

## 8.1 DC Characteristics

**TABLE 8-1: DC TEMPERATURE AND VOLTAGE SPECIFICATIONS**

DC CHARACTERISTICS			Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Commercial Operating temperature $0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$ Industrial Operating temperature $-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$				
Param. No.	Symbol	Characteristics	Min.	Typ.	Max.	Units	Conditions
<b>Operating Voltage</b>

DC16	VPOR	<b>VDD Start Voltage</b> to Ensure Internal Power-on Reset Signal	1.75	—	2.1	V	—
DC17	SVDD	<b>VDD Rise Rate</b> to Ensure Internal Power-on Reset Signal	0.00005	—	0.115	V/ $\mu\text{s}$	—

**Note 1:** This is the limit to which VDD can be lowered without losing RAM data.

**2:** Overall functional device operation at  $V_{BORMIN} < V_{DD} < V_{DDMIN}$  is tested, but not characterized. Refer to parameter BO10 in [Table 8-5](#) for BOR values.

**TABLE 8-2: DC CHARACTERISTICS: OPERATING/POWER-DOWN CURRENT**

DC CHARACTERISTICS				Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated) Commercial Operating temperature $0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$ Industrial Operating temperature $-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$		
Parameter No.	Symbol	Typical	Max.	Units	Conditions	
<b>Operating/Power-Down Current (Note 1, 2)</b>						
DC20	IDD		26.5	mA	—	
DC30	I <sub>AVG</sub>		13.65	mA	—	
DC40	I <sub>IDLE</sub>		2.5	mA	—	
DC50	I <sub>PD</sub>	70	150	$\mu\text{A}$	$0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$	
DC50	I <sub>PD</sub>	120	180	$\mu\text{A}$	$-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$	

**Note 1:** A device's supply current is mainly a function of the operating voltage and frequency, as well as temperature.

**2:** The current measurements are as follows:

- Operating current (IDD):  
This is the peak active current value.
- Average current (I<sub>AVG</sub>):  
This value represents an average current measurement of active and low power mode time intervals during operation measured over 1 second period.
- Idle current (I<sub>IDLE</sub>):  
This is the average idle current value when no sensor is actively providing environmental changes (and the device is not in power-down mode).
- Power-Down current (I<sub>PD</sub>):  
This value is the current measured in power-down mode. This is the sleep state entered when the Host issues the SET\_POWER (Sleep) Command if the I<sup>2</sup>C host interface is used.  
Wakeup from power-down mode requires the HOST\_TO\_SH\_WAKE pin if the I<sup>2</sup>C host interface is used.

**Note 1:** Data in “Typical” column is at 3.3V, 25°C unless otherwise stated. Parameters are for design guidance only and are not tested.

- 2:** The leakage current on the MCLR# pin is strongly dependent on the applied voltage level. The specified levels represent normal operating conditions. Higher leakage current may be measured at different input voltages.
- 3:** Negative current is defined as current sourced by the pin.
- 4:** This parameter is characterized, but not tested in manufacturing.
- 5:** See the “Pin List” section for the 5V-tolerant pins.
- 6:** The V<sub>IH</sub> specifications are only in relation to externally applied inputs, and not with respect to the user-selectable internal pull-ups. External open drain input signals utilizing the internal pull-ups of the device are ensured to be recognized only as a logic “high” internally to the device. For External “input” logic inputs that require a pull-up source, to ensure the minimum V<sub>IH</sub> of those components, it is recommended to use an external pull-up resistor rather than the internal pull-ups of the device.

AC CHARACTERISTICS				Standard Operating Conditions: 2.3V to 3.6V (unless otherwise stated)			
Param. No.	Symbol	Characteristics		Min.	Max.	Units	Conditions
IS10	TLO:SCL	Clock Low Time	100 kHz mode	4.7	—	μs	—
			400 kHz mode	1.3	—	μs	—
IS11	THI:SCL	Clock High Time	100 kHz mode	4.0	—	μs	—
			400 kHz mode	0.6	—	μs	—
IS20	TF:SCL	SDAx and SCLx Fall Time	100 kHz mode	—	300	ns	Cb is specified to be from 10 to 400 pF
			400 kHz mode	20 + 0.1 Cb	300	ns	
IS21	TR:SCL	SDAx and SCLx Rise Time	100 kHz mode	—	1000	ns	Cb is specified to be from 10 to 400 pF
			400 kHz mode	20 + 0.1 Cb	300	ns	
IS25	TSU:DAT	Data Input Setup Time	100 kHz mode	250	—	ns	—
			400 kHz mode	100	—	ns	—
IS26	THD:DAT	Data Input Hold Time	100 kHz mode	0	—	ns	—
			400 kHz mode	0	0.9	μs	—
IS30	TSU:STA	Start Condition Setup Time	100 kHz mode	4700	—	ns	Only relevant for Repeated Start condition
			400 kHz mode	600	—	ns	
IS31	THD:STA	Start Condition Hold Time	100 kHz mode	4000	—	ns	After this period, the first clock pulse is generated
			400 kHz mode	600	—	ns	
IS33	TSU:STO	Stop Condition Setup Time	100 kHz mode	4000	—	ns	—
			400 kHz mode	600	—	ns	—
IS34	THD:STO	Stop Condition Hold Time	100 kHz mode	4000	—	ns	—

## APPENDIX A: REVISION HISTORY

TABLE A-1: REVISION HISTORY

Revision	Section/Figure/Entry	Correction
DS00001888B (01-26-16)	Industrial Temp Range	Added Industrial Temp Range to Data Sheet Updated IPD for Industrial Temp Range
DS00001888A (02-05-15)	Initial Release	

## THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at [www.microchip.com](http://www.microchip.com). This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

## CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at [www.microchip.com](http://www.microchip.com). Under "Support", click on "Customer Change Notification" and follow the registration instructions.

## CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://microchip.com/support>

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u> <sup>(1)</sup>	X	-	XXX
Device Series	Temperature Range		Sensor Fusion Firmware
<b>Device:</b>	MM7150 <sup>(1)</sup>		
<b>Temperature Range:</b>	Blank = Commercial (0°C to +70°C) I = Industrial (-40°C to +85°C)		
<b>Sensor Fusion Firmware:</b>	AB1 = Bosch 9-axis Sensor Fusion		

**Example:**

- a) MM7150-AB1, Bosch 9-axis sensor fusion, Commercial Temperature
- b) MM7150I-AB1, Bosch 9-axis sensor fusion., Industrial Temperature

**Note 1:** These products meet the halogen maximum concentration values per IEC61249-2-21.  
All package options are lead-free and RoHS compliant. For RoHS compliance and environmental information, please visit <http://www.microchip.com/pagehandler/en-us/aboutus/ehs.html>.

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoq® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*
