1. Module Classification Information

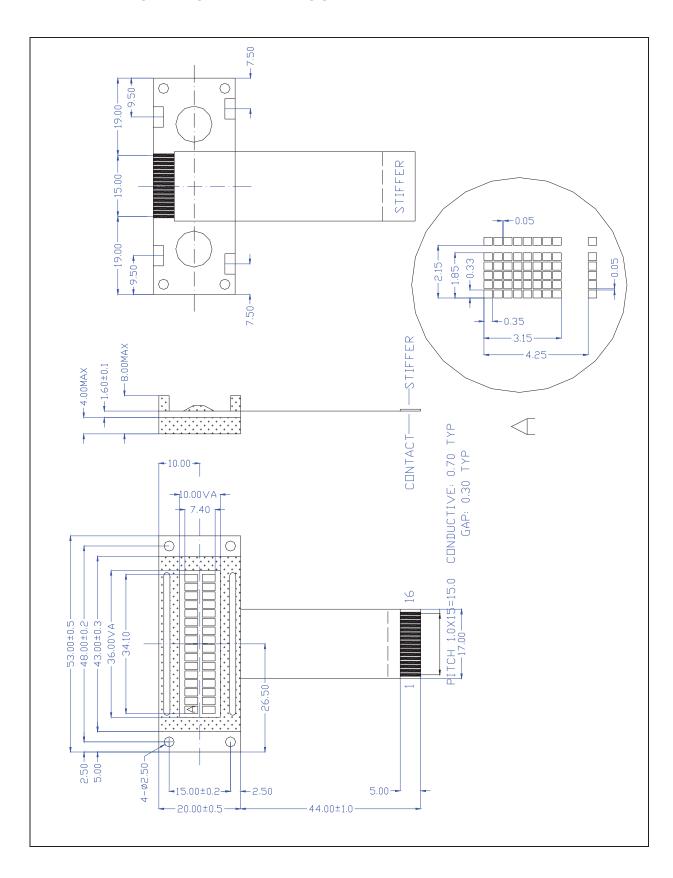

1	Brand: Orient Display	(N.A.) Ltd.					
2	Display Type : C→ Character Type, G→ Graphic Type,						
	NONE→ Custom-made						
3	Display Font: Characters X Lines / Rows X Columns /Others						
4	Model serials no.						
5	RoHS compliant: R→YES NONE→ NO						
6	IC Package Type:	M→ SMT Type					
		B→ COB Type T→ TAB Type					
		G→ COG Type					
		F→ COF Type					
		S→ Special					
7	LCD Mode:	P→TN Positive					
		N→TN Negative					
		Y→ STN Positive, Yellow Green					
		B→ STN Negative, Blue G→ STN Positive, Gray					
		W→ FSTN Positive, Gray					
		T→ FSTN Negative					
		F→ FFSTN Negative					
		S→ Special					
8	Viewing direction	6→ 6:00,12→12:00, S→Special					
9	Temperature range	N → Normal Temperature					
		W→ Wide Temperature					
4.0	1000	S→ Special					
10	LCD Polarizer Type	R→ Reflective T→ Transmissive					
		F→ Transflective					
		S→ Special					
11	Backlight Type	N→ None					
	J 71-2	$D \rightarrow LED$					
		E→ EL					
		F→ CCFL					
10	Dooklight Color	S→ Special					
12	Backlight Color	Y→ Yellow-green B→ Blue					
		A→ Amber					
		W→ White					
		G→ Green					
		$R \rightarrow Red$

6. BACKLIGHT CHARACTERISTICS

6.1 Absolute Maximum Ratings

ITEM	SYMBOL	CONDITION	MIN	MAX	UNIT
Forward Current	Ifm	-	-	30	mA
Reverse Voltage	Vr	-	-	8	V
Power Dissipation	Pd	-	-	90	mW

6.2 Operating Parameters

ITEM	SYMBOL	CONDITION	MIN	TYP.	MAX	UNIT	
Forward	Vf*	If=20mA-		3.9	4.0	V	
Voltage	VI	11-2011A-	_	3.9	7.0		
Peak	,	If 20m A		F60			
Wavelength	λ	If=20mA-	-	568	-	nm	

Vf is the voltage applied to Pin15 and Pin16

7. ELECTRO-OPTICAL CHARACTERISTICS

ITEM	SYMBO	CONDI	MIN.	TYP.	MAX.	UNIT	REF.	
TIEM	L	TION				OIATI	KLI.	
Contrast	CR	25 ℃		12			Note1	
Rise Time	tr	25 ℃		160	240	ms	Note2	
Fall Time	tf	25 ℃		100	150	ms	note 2	
Viewing	θ 1- θ 2	25 ℃		-	60	DEG	Note 3	
Angle	Ø1, Ø2	23 (-40	-	40	DEG	Note 3	
Frame	Ff	25 ℃		70		Hz	note 2	
Frequency				70				

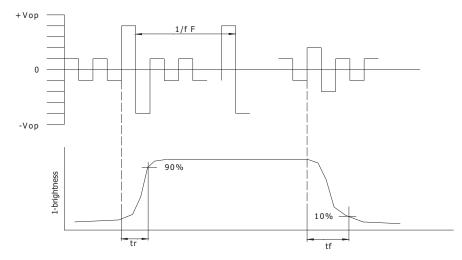

Note(1): Contrast ratio is defined under the following condition:

CR= <u>brightness of selected condition</u> brightness of non-selected condition

- (a). Temperature-----25C
- (b). Frame Frequency-----64Hz
- (c). Viewing angle----- $\theta = 0$, $\emptyset = 0$

(d). Operating Voltage---5.0V

Note(2): definition of response time:

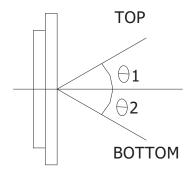

Condition:

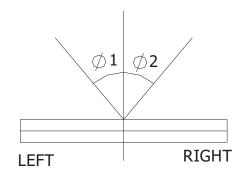

- (a). Temperature-----25C
- (b). Frame Frequency-----64Hz
- (c). Viewing angle----- $\theta = 0$, $\emptyset = 0$
- (d). Operating Voltage---5.0V

Note(3): definition of view angle:

TOP-BOTTOM DIRECTION

RIGHT-LEFT DIRECTION

8. DISPLAY CONTROL INSTRUCTION

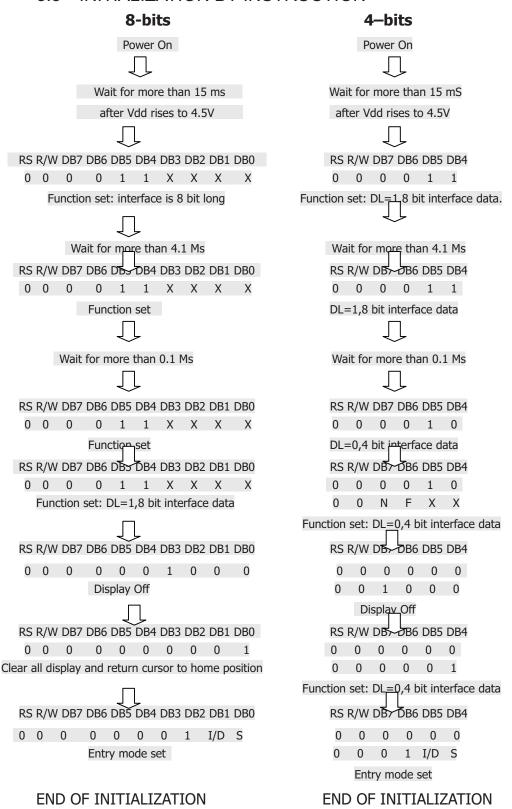

8.1 INSTRUCTION TABLE

Functio											Execu	
n	5								B B 1 0		Time*	
											(Max)	
Clear Display										Clears entire display and returns the cursor to home position (address 0)		
Return Home										Return the cursor to the home position. DD RAM contents remain unchanged. Set DD RAM address to zero.		
Entry mode set								Í	/)	Set cursor moving direction and enable the shift of the display. These operations are performed during data write/read of DD RAM/CG RAM. 1/D=1: increment; 1/D=0: decrement; S=1: whole display shift when data is written.		
Display ON/OFF control										Set display (D),cursor(C) and blinking of cursor(B) ON/OFF. D=1:display ON; D=0: display OFF. C=1:Cursor ON; C=0:cursot OFF. B=1:Blink ON; B=0, Blink OFF.		
Cursor or Display shift							/ C	/ L		Move the cursor and shift the display without changing DDRAM contents. S/C=1: Display Shift; S/C=0:Cursor move. R/L=1:shift to right; R/L=0:shift to left.		
Functio n Set	0	0	0	0	1	D L	N	F	ΧX	Set interface data length (DL), number of display lines (N) and character font (F).DL=1: 8 bits; DL=0: 4 bits. N=1: 2 lines; N=0: 1 lines. F=1: 5X11 dots; F=0: 5X7 dots.		
Set CG RAM add	0	0	0	1		A	40	G		Set CG RAM address. CG RAM data is sent and received after this setting.	40 µ S	
Set DD RAM Add	0	0	1			A	DI	D		Set DD RAM address. DD RAM data is sent and received after this setting.	40 μ S	
Read BF & Addr			F				AC			Read BUSY FLAG (BF) and the contents of the address counter. BF=1: internal operation; BF=0: can accept instruction.	0 μ S	
Write Data to RAM										Write data into DD RAM or CG RAM.	40 S**	μ
Read Data from RAM	1	0	F	RE	Α	D	D	Α٦	Ā	Read data from DD RAM or CG RAM.	40 S**	μ

8.2 Character Table FOR(-B0)

Upper

8.3 INITIALIZATION BY INSTRUCTION

4-bit operation (4-bits 1 line)

Function	RS	RW	D7 D	6 D5	D4		Display	Description					
power on delay								Initialization. No display appears.					
Frnction set	0	0	0		1	0		Sets to 4 -bit operation. In this case, operation is handled as 8-bits by initialization,a nd Only this instruction completes with one write.					
Frnction set	0 0	0	0	0	1 X	0 X		Sets 4 -bit operation, 1-line display and 5*7 do character font. (number of display lines an character fontscannot be changed hence after.)					
Display ON/OFF	0	0	0 1		0 1	0 0		Turn on display and cursor.					
Control													
Entry Mode Set	0	0	0		0	0		Turn on display and cursor.					
Write data to CG/DD/ARM	1	0	0	1	-	0		Write "O". Curaor incrementer by one and shift to right.					
							same as 8-	bit operation					

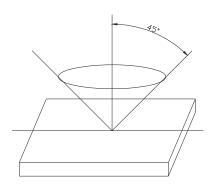

9. INSPECTION STANDARDS

9.1 Inspection Conditions

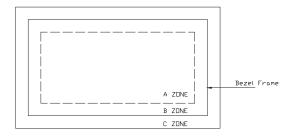

The LCD shall be inspected under 40W white fluorescent light.

The distance between the eyes and the samples shall be more than 30cm.

All directions for inspecting the sample should be within 45 degree against perpendicular line.

9.2 Definition of Applicable Zone

A Zone: Active Display Area

B Zone: Area from Bezel Frame to A Zone

C Zone: Rest Area of Bezel

A Zone + B Zone=Effective Viewing Area

9.3 Standards

NO	PARAMETER	CRITERIA

10. PRECAUTIONS IN USING LCM

1. LIQUID CRYSTAL DISPLAY (LCD)

LCD is made up of glass, organic sealant, organic fluid, and polymer based polarizers. The following precautions should be taken when handing,

- (1). Keep the temperature within range of use and storage. Excessive temperature and humidity could cause polarization degredation, polarizer peel off or bubble.
- (2). Do not contact the exposed polarizers with anything harder than an HB pencil lead. To clean dust off the display surface. Wipe gently with cotton. Chamois or other soft material soaked in petroleum benzin.

- (3). Wipe off saliva or water drops immediately. Contact with water over a long period of time may cause polarizer deformation or color fading, while an active LCD with water condensation on its surface will cause corrosion of ITO electrodes.
- (4). Glass can be easily chipped or cracked from rough handing. especially at corners and edges.
- (5). Do not drive LCD with DC voltage.

2. Liquid Crystal Display Modules

2.1 Mechanical Considerations

LCM are assembled and adjusted with a high degree of precision. Avoid excessive shocks and do not make any alterations or modifications. The following should be noted.

- (1). Do not tamper in any way with the tabs on the tabs on the metal frame.
- (2). Do not modify the PCB by drilling extra holes, changing its outline, moving its components or modifying its pattern.
- (3). Do not touch the elastomer connector, especially insert an backlight panel (for example, EL).
- (4). When mounting a LCM make sure that the PCB is not under any tress such as bending or twisting. Elastomer contacts are very delicate and missing pixels could result from slight dislocation of any of the elements.
- (5). Avoid pressing on the metal bezel, otherwise the elastomer connector could be deformed and lose contact, resulting in missing piels.

2.2. Static Electricity

LCM contains CMOS LSI's and the same precaution for such devices should apply, namely

- (1). The operator should be grounded whenever he/she comes into contact with the module. Never touch any of the conductive parts such as the LSI pads, the copper leads on the PCB and the interface terminals with any parts of the human body.
- (2). The modules should be kept in antistatic bags or other containers resistant to static for storage.
- (3). Only properly grounded soldering irons should be used.
- (4). If an electric screwdriver is used, it should be well grounded and shielded from commutator sparks.
- (5). The normal static prevention measures should be observed for work clothes and working benches; for the latter conductive (rubber) mat is recommended.
- (6). Since dry air is inductive to statics, a relative humidity of 50-60% is recommended.

2.3. Soldering

- (1). Solder only to the I/O terminals.
- (2). Use only soldering irons with proper grounding and no leakage.
- (3). Soldering temperature: 280 $^{\circ}\text{C} \pm 10^{\circ}\text{C}$
- (4). Soldering time: 3 to 4 sec.
- (5). Use eutectic solder with resin flux fill.
- (6). If flux is used, the LCD surface should be covered to avoid flux spatters. Flux residue should be removed after wards.

2.4. Operation

- (1). The viewing angle can be adjusted by varying the LCD driving voltage V0.
- (2). Driving voltage should be kept within specified range; excess voltage shortens display life.
- (3). Response time increases with decrease in temperature.
- (4). Display may turn black or dark blue at temperatures above its operational range; this

- is (however not pressing on the viewing area) may cause the segments to appear "fractured".
- (5). Mechanical disturbance during operation (such as pressing on the viewing area) nay cause the segments to appear "fractured".

2.5. Storage

If any fluid leaks out of a damaged glass cell, wash off any human part that comes into contact with soap and water. Never swallow the fluid. The toxicity is extremely low but caution should be exercised at all the time.

2.6. Limited Warranty

Unless otherwise agreed between Orient Display and customer, Orient Display will repiace or repair any of its LCD and LC, which is found to be defective electrically and visually when inspected in accordance with Orient Display acceptance standards, for a period on one year fron data of shipment. Confirmation of such date shall be based on freight documents. The warranty liability of Orient Display is limited to repair and/or replacement on the terms set forth above. Orient Display will not responsible for any subsequent or consequential events.
